The Industry's first reference book on Operational Amplifiers! From McGraw-Hill and Burr-Brown

■ This book is divided into two principal parts and two appendices. Part I considers the design of operational amplifiers, provides insight into the factors which determine performance characteristics, and outlines the techniques available for their control. Part II presents an extensive selection of practical operational amplifier applications and provides sufficient descriptions of operation to permit design adaptation from the specific circuits described. In Appendix A, the basic theory of operational amplifiers is reviewed to provide an accompanying reference. Appendix B gives concise definitions of the performance parameters used to characterize operational amplifiers and provides associated test circuits.

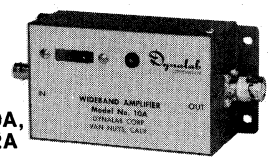
WIDEBAND AMPLIFIERS

Dynalab's high performance, general purpose, wideband amplifiers are invaluable aids for a wide variety of instrumentation and laboratory applications. Accurate, stable gain with flat response assures dependable performance.



10A, 12A

The Dynalab Model 10A and 12A Wideband Amplifiers are compact, self-powered units capable of extending the useful sensitivity of such instruments as oscilloscopes, voltmeters, counters, and analyzers, and are very useful for general purpose laboratory applications. Both amplifiers have 20 dB of gain, with the 10A offering flat response to 150 mHz while the 12A has a flat response to 500 mHz. Two amplifiers of the same type may be cascaded. The units employ self-contained, rechargeable battery power sources.

The Model 20A Wideband Power Amplifier can provide high level CW or swept output from signal generators, VHF/UHF test oscillators (such as the HP3200B), and sweepers over the 10 to 500 mHz range at power levels up to 5 watts. The 20A Amplifier can also be used to supply r.f. amplification and power for experimental set-ups.

The Model 20A has a built-in AC power supply.

The amplifiers have a gain accuracy and response flatness typically better than ±1 dB and the maximum output ratings are for 1 dB compression. Both the Models 10A and 12A have a noise figure of less than 5 dB. All amplifiers have nominal input and output impedances of 50 ohms and are provided with BNC input/output connectors. Other standard connectors are available at small extra charge.

Quality and Design Optimization is available in five families of Analog Function Modules.

MULTIPLIER/DIVIDERS

Intronics' solid-state analog multiplier/dividers perform the four operations of multiplication $\frac{xy}{10}$, squaring $\frac{x^2}{10}$, square rooting $\sqrt{10z}$, and division $\frac{10z}{x}$.

These devices are available in six "stretchable" generic designs:

Series M530 — Self-contained monolithic design. 1 MHz bandwidth with accuracies from 2% to ½%.

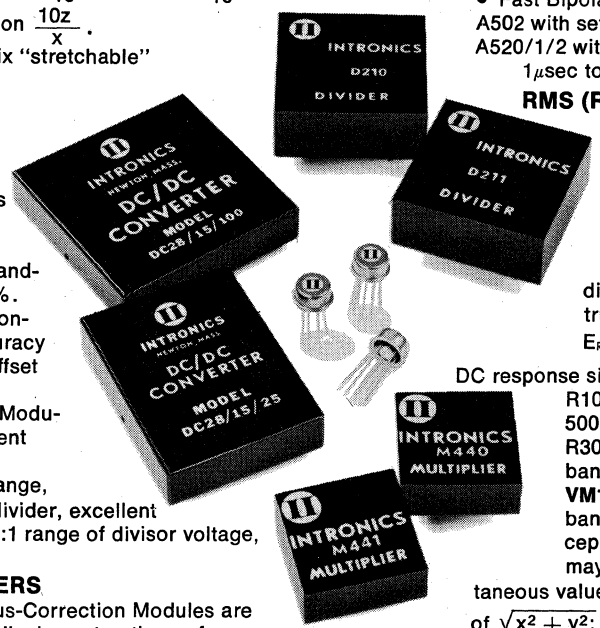
M440, M441 — Economy models — low cost, small size, wide bandwidth.

M507, M508 — Features wide bandwidth of 5MHz; accuracy to 0.5%.

M610, M611 — Precision transconductance, high pretrimmed accuracy to 0.25%; 600kHz bandwidth. Offset drift only 100μV/°C.

M310, M311 — Precision Pulse-Modulation, accuracy to 0.5%, excellent 50μV/°C temperature stability.

D210, D211 — Wide Dynamic Range, compact, two quadrant analog divider, excellent accuracies to 0.5% over a 1000:1 range of divisor voltage, bandwidth independent.



CRT DEFLECTION OPTIMIZERS

C102/C103 CRT Geometry/Focus-Correction Modules are used to create extremely linear displays at optimum focus on flat face magnetic-deflection CRT's. These modules accept horizontal (H) and vertical (V) input voltages, and generate three outputs: The first two outputs, the H and V signals corrected for 'pincushion' distortion, are fed to the horizontal and vertical deflection amplifiers; the third output, a correction for dynamic focus, is fed to the dynamic focus amplifier. Unique solid-state circuitry smoothly synthesizes these functions. These modules are internally set for total deflection angles from 20 to 90 degrees, and are accurate to 0.1% of total deflection angles. Provision is made for external adjustments. The C102 and C103 provide 10MHz and 1MHz bandwidths, respectively.

C201, C202 CRT Geometry-Correction Modules employ economical transconductance techniques to generate the horizontal and vertical correction functions with 1% accuracy, and 1MHz bandwidth. A compatible focus-correction module (FC101) is available.

DYNAMICALLY OPTIMIZED OPERATIONAL AMPLIFIERS

are designed to optimize the most single important dynamic parameter-settling time, which includes the total effect of delay time, slew rate, and final settling to a specified percent error. These modules are especially useful in CRT display and converter applications. Generic types include:

- Fast FET Differential Input Amplifiers

FA530/1 settling from a 10V step input ± to within 0.01% in 500nsec.

FA540/1 settling time to within 0.01% in 1.5μsec.

- Fast Bipolar Inverting Input Amplifiers

A502 with settling time of 60nsec to 0.1%.

A520/1/2 with settling time of 200nsec to 0.1% and 1μsec to .01%.

RMS (ROOT MEAN SQUARE) TO DC CONVERTERS/VECTOR OPERATOR

The R101/R301/R310 generic line of RMS operators rapidly compute the true RMS value of AC or DC (or combination) input waveforms. Solid-state circuitry directly synthesizes the equation for true RMS measurement:

$$E_{RMS} = \sqrt{\frac{1}{T}\int_0^T e(t)^2\,dt}$$

DC response simplifies calibration problems.

R101 — General Purpose Converter, 500kHz bandwidth, accuracy to 0.2%.

R301, R310 — Precision Converters, 1MHz bandwidth, accuracy to .05%.

VM101 VECTOR OPERATOR is a wideband (1MHz) solid-state module that accepts bipolar AC/DC inputs, and which may be used to compute: (a) the instantaneous value of $\sqrt{x^2 + y^2}$; (b) the average value of $\sqrt{x^2 + y^2}$; (c) the absolute or average value of X or Y. Two units may be connected to compute $\sqrt{x^2 + y^2 + z^2}$. Application include: vector summation; rectangular-to-polar conversion; CRT-intensity correction; precision full-wave rectification.

POWER CONVERSION MODULES include generic types for both AC-to-Regulated-DC voltage conversion, and DC-to-Regulated-DC voltage conversion.

Precision Modular Power Supplies accept 105-125 VAC, 50 to 440 Hz input (other input voltages from 90 up to 240 VAC available as options), and provide single, dual, or triple, line-and-load-regulated outputs preset to 0.5% accuracy. Line isolation is provided by the internal transformer, with special shielded, high-isolation units available on special order. Output voltages available range from 5V to 24V, with up to 10W total output. Five-Volt logic supplies feature overvoltage protection, and all units are short-circuit protected.

Miniature Modular DC/DC Converters offer conversion efficiencies greater than 50% and 3W output in only 2" x 2" x 0.4" module dimensions. Dual-regulated (0.02% line and load) outputs are isolated from both input lines, and a sophisticated input-filter design provides maximum power-source EMI/RFI protection . . . Input and output voltage options range from 5 to 30V, with single or dual outputs available, preset to 1% accuracy. A metal case provides electrostatic shielding.

Intronics' offers a wide variety of analog functions, both off the shelf and custom designed for your requirements. Call our Applications Engineering Department for further information.

PRESTON

FLOATING DIFFERENTIAL INSTRUMENTATION AMPLIFIERS

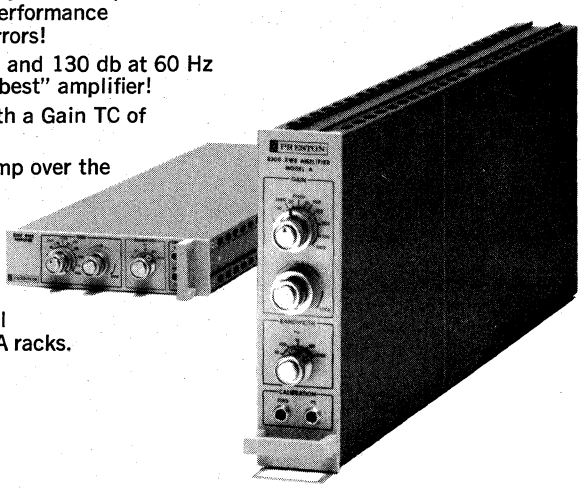
Preston's amplifiers deliver precision many times better than any other amplifier! Our "Balanced Precision" 8300 XWB Series have greatly improved performance to overcome the FOUR major sources of instrumentation amplifier errors!

COMMON MODE REJECTION — Preston's CMR of 150 db at DC and 130 db at 60 Hz reduces errors by a factor of 3 to 10 times over the "next best" amplifier!

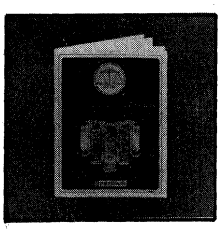
TEMPERATURE STABILITY — Preston is 2 to 5 times better with a Gain TC of only 10 ppm/°C and Zero Shift of less than 0.1μV/°C RTI!

PUMPOUT CURRENT — 10 times better! Stays under ½ nanoamp over the entire temperature operating range!

OVERLOAD RECOVERY — 10 times as fast! Recovers to within 0.01% in 30 μsec!



The 8300 XWB Series is versatile, too! You can select from many combinations of ACCURACY, LINEARITY, and both FIXED and ADJUSTABLE BANDWIDTH! And they all have their own integral power supply and mount in standard RETMA racks.



To obtain complete information on the entire Preston instrumentation amplifier line, ask for your copies of our technical literature, and for our new 12 page "Balanced Precision" brochure that shows how to determine the true performance of your instrumentation system, and how Preston's 8300 XWB Series amplifiers will deliver all the precision you need!

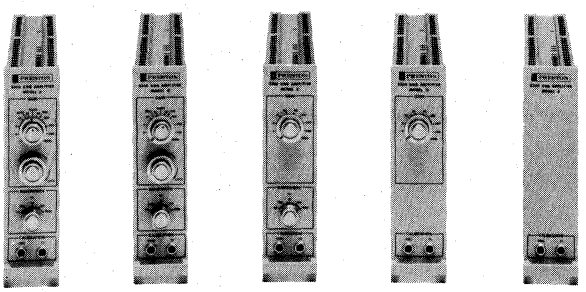
8300 XWB Series

Floating Differential Instrumentation Amplifiers

All of the models of Preston's 8300 XWB Series meet all of these performance specifications:

Input Impedance	100 Megohms shunted by less than 0.001 μfd at DC
Input Noise	3 μV (100 kHz bandwidth)
Pumpout Current	Less than 0.2 nanoamps at constant temperature and less than 0.01 nanoamps change/°C
Common Mode Rejection	150 db at DC, 130 db at 60 Hz, 110 db at 400 Hz
Common Mode Voltage	350 Volts maximum peak AC or DC
Bandwidth	DC to 100 kHz
Gain Stability	0.01% (six month term)
Settling Time	30 μsec to within 0.01% of input signal
Long Term Zero Drift	±5 μV RTI, ±1 mV RTO (six month term)
Output Noise	0.2 millivolts peak
Output Capability	±10 volts at 100 ma.

Five basic models provide versatility to meet every need:



MODEL	A	B	C	D	E
Gain	Ten Steps plus Variable to 2500 X		Ten Steps Fixed to 1000 X		Fixed 1X to 2000 X
Gain Accuracy	±0.01%		±0.1%		±0.01%
Gain Linearity	±0.005%		±0.01%		
Drift (μV/°C)	0.1 μV RTI ±20 μV RTO		0.3 μV RTI ±100 μV RTO		
Bandwidth	Selectable to 100 kHz			Preset up to 100 kHz (max)	

A programmable gain version of the Model "A" is also available. And all of the models of the 8300 XWB Series can be ordered in this "horizontal" configuration.

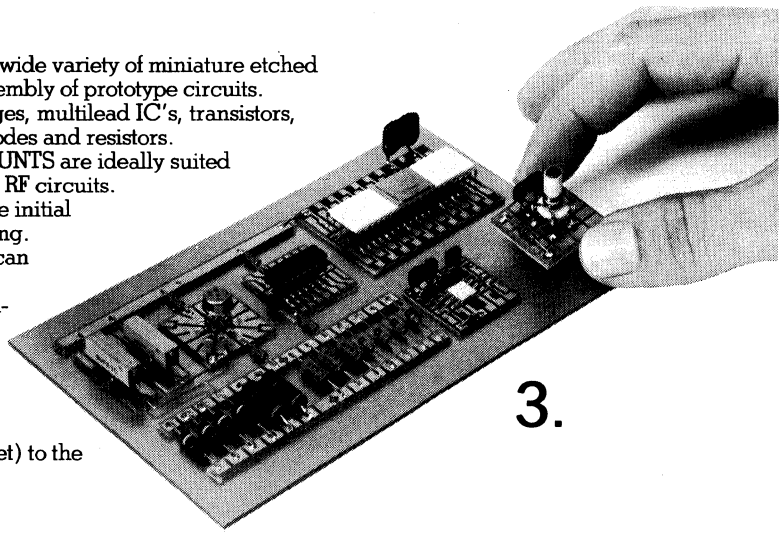
Breadboarding?

Consider MINI-MOUNTS™. They give you answers to some of the thorniest questions in breadboarding.

- ☐ The MINI-MOUNT system offers you a wide variety of miniature etched patterns for quick and inexpensive assembly of prototype circuits. Included are mounts for DIP IC packages, multilead IC's, transistors, trimmer potentiometers, capacitors, diodes and resistors.
- ☐ From DC to the GHz region, MINI-MOUNTS are ideally suited for analog circuits, digital circuits, and RF circuits.
- ☐ With MINI-MOUNTS, you eliminate the initial artwork, etching and bothersome drilling.
- ☐ Following your circuit schematic, you can design a finished board in minutes.
- ☐ MINI-MOUNTS can be easily disassembled for re-use.



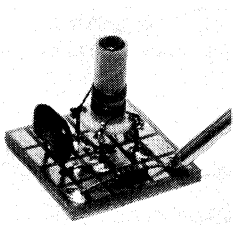
3.

Look, No holes.

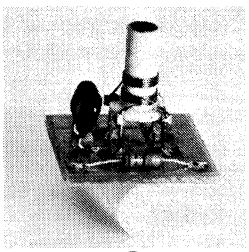
There are just three easy steps:

1. Solder your component (or socket) to the MINI-MOUNT pattern.
2. Peel off the pressure-sensitive backing.
3. Position MINI-MOUNT on ground plane.

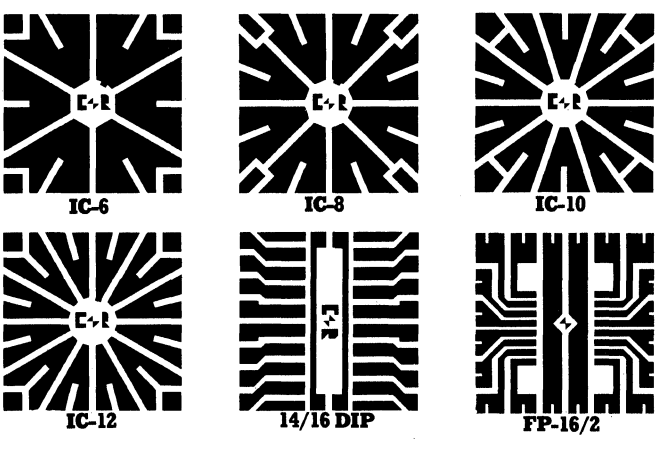
Then all you have left is to interconnect the system with soldered wires.



1.



2.



The above patterns are all shown as actual size.

CURRENT SENSORS BIDIRECTIONAL

Bidirectional current sensors are used to sense either D.C. currents whose polarity or direction of flow may reverse or A.C. currents within the response capabilities of the device. The electrically isolated output signal duplicates the current wave form. Because of their fast response characteristics, these sensors may be used for pulse measurements and controls.

CURRENT SENSORS A.C.

A broad line of "pass thru hole type" A.C. current sensors are available for measurement or control of current at standard line frequencies or over a broad frequency spectrum. The sensors produce a high level D.C. signal output that is electrically isolated from the current line. Power dissipation is negligible and economy models of these sensors may be used as replacements for shunts.

A.C. CURRENT CONTROLLERS

A.C. Current Controllers are adjustable devices that detect a set current level and produce a relay closure or opening when the set current level is exceeded. These ruggedly built industrial control devices utilize a current to voltage "thru hole" toroidal transformer to sense the line current. The (CT) current transformer's output is fed to a control box which contains the signal conditioning circuitry and relay. Uses include overload and underload detection, ground fault monitoring, power failure, etc.

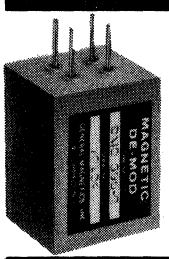
Solid State Magnetic Demodulators

FREQ. RANGE 20 Hz to 100 KHz



G/M MAGNETIC DEMODULATORS are solid state circuits for converting phase reversing AC signal voltages into phase detected polarity reversing DC voltages; the amplitude and polarity of the DC output are directly proportional to the phase and amplitude of the AC signal.

High reference impedance resulting in very small reference power requirements.
Output as high as ±10 v. DC in present units.
Unit operation frequencies; 20 Hz to 100 KHz.
Operation over wide environmental range.
Very low DC offset null voltages (as low as 0.1% of full scale).
Signal and reference terminals may be isolated.
Low output impedance.
Small physical size.

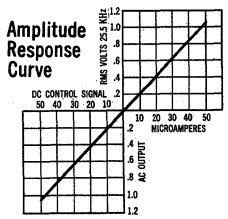
'Mag Mod' Micro-miniature Magnetic Modulators

... Design Analog Computers with Micro Magnetics

Withstands High Intensity Nuclear Radiation



Typical Performance Data — Model 748-3

- **Output distortion as low as 1%**
- **Electrical zero point and gain, repeatability and stability over the entire service life**
- **Extremely broad bandwidth**
- **Carrier frequencies as high as 5 MHz**
- **Input signal current resolution better than 0.001 μa**

Circuit Isolation — DC to AC Sinusoidal Conversion and Amplification

"MAG MODS" PROVIDE FOUR QUADRANT OPERATION, extreme stability with negligible change of phase, gain and zero position over a wide temperature range. Design is simple, featherweight and rugged — with no vacuum tubes, semiconductors or moving parts to limit life.

MICRO MAGNETIC MODULATORS FEATURE an essentially drift-free circuit with superior phase and gain stability over wide environmental ranges. All the ruggedness, dependability, wide dynamic range and stability that are characteristic of the larger magnetic modulators are engineered into this new magnetic circuit. MICRO "MAG MODS" are shock and vibration proof, provide infinite standby and service life. The micro modulators below are typical; for specifications on other models request literature.

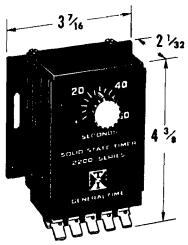
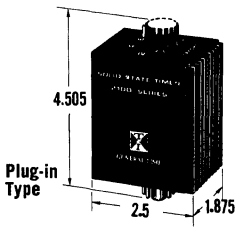
Solid State Timers



Rear Mount Type



Plug-in Type

Versatile standard timers meet the broadest range of applications. Plug-in or Rear Mount types; for delay, interval, or D.O.D. (delay on de-energization) timing modes. **Features:** Exceptional repeat accuracy; transient protection; eleven time ranges; isolated outputs; AC or DC input; low operating temperature and no first cycle effect. UL and CSA recognized. **Repeat Accuracy:** ±2% of set point under constant voltage and temperature; under 1 second, a constant of ±20 msec applies. **Temperature Range:** −10° C to +55° C ambient.

How To Order

SPECIFY SERIES: Series 2111 Plug-in Type or Series 2211 Rear Mount Type: DELAY Mode Timer. Delay period starts on application of voltage. At end of set delay, integral relay energizes. When input voltage is removed, the output relay de-energizes and timer resets.

Series 2112 Plug-in Type or Series 2212 Rear Mount Type: INTERVAL or D.O.D. Mode Timer. For these modes; input voltage is supplied to timer always with interval mode, on closure of a momentary or sustained switch, integral relay energizes the load for time period selected; at the end of timing period, the relay de-energizes and load is removed from line. In D.O.D. mode, on closure of a control switch, the output relay energizes; timing period begins when control switch is opened; at end of timed interval, the relay de-energizes.

ADD INPUT SUFFIX: Suffix-**1P** for 117 volts AC/DC, 50/60 Hz and 3.5 watts max.; e.g., 2111-**1P**.

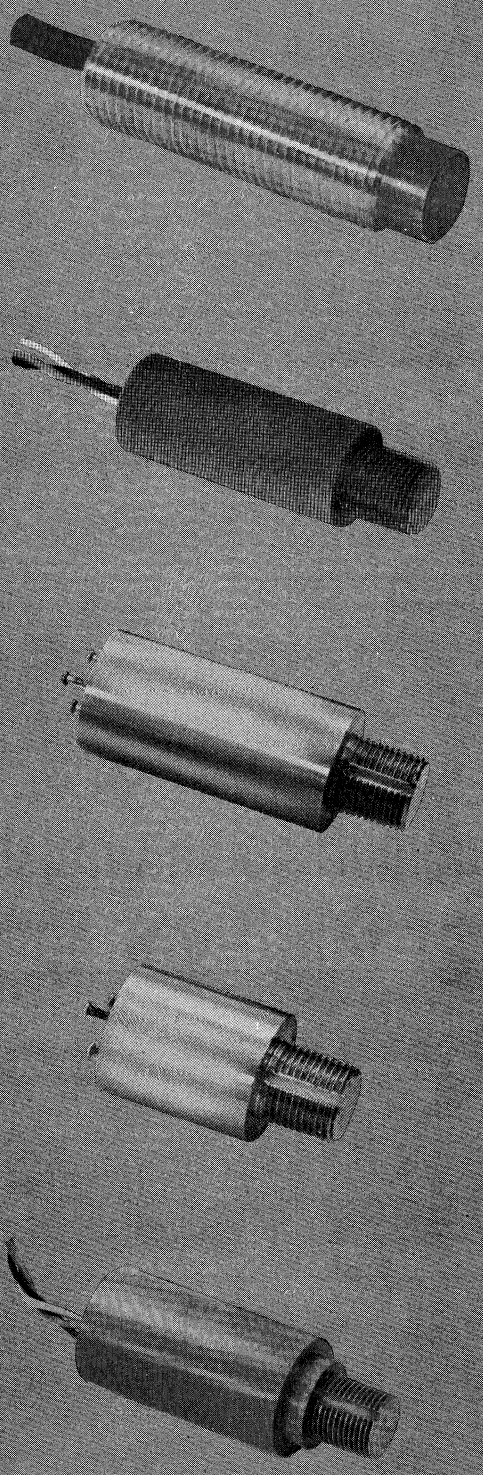
SPEED INDEPENDENT MAGNETIC PICK-UPS



The ISC*Magnetics family of Magnetic Pick-Ups are devices having output voltage amplitudes that are independent of the rate of change to the external magnetic field. This characteristic results in a device ideally suited for use in a multitude of static as well as dynamic sensing applications.

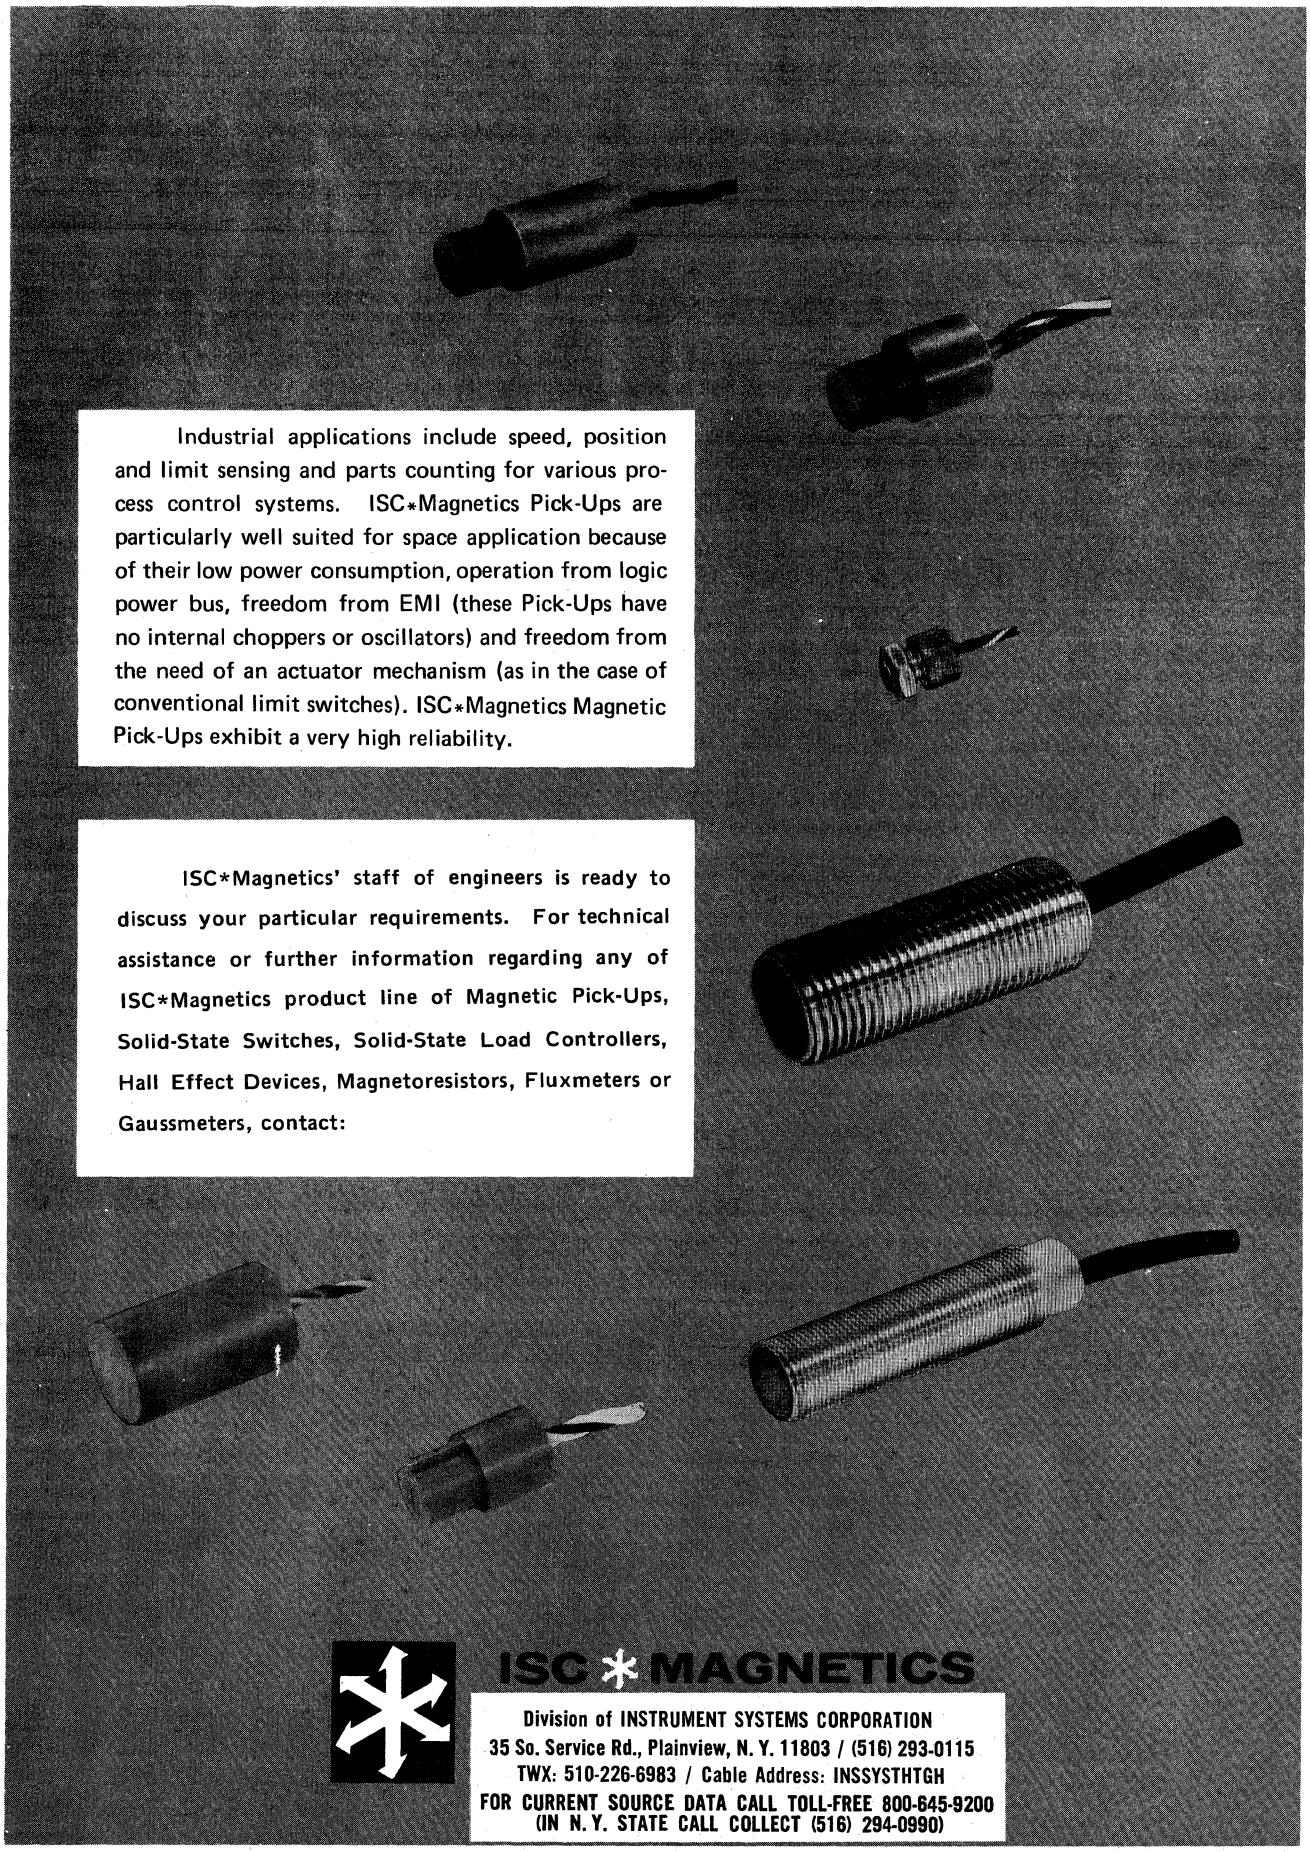
The applications for ISC*Magnetics Magnetic Pick-Ups encompass the limited environment of computer peripheral equipments, the rugged environment of internal combustion engines, as well as the extreme reliability requirement of aerospace. New variations are being developed in answer to new potential applications.

Computer applications include sensing of indexing marks for the drive mechanisms in card readers, magnetic tape memories, and the paper roll drive and character selection in printers, as well as contactless limit switching. Economically priced, these units can be used in many applications previously employing photo sensors.

Transportation applications include wheel speed sensing (for skid-controlled braking systems), ignition system timing, vehicle sensing (traffic control). Ruggedly constructed, suitable for vehicle axle mounting and operable from noisy and widely varying power sources, these units simplify many designs.

PATENTS PENDING

ALL MAGNETIC PICK-UPS ARE SHOWN ACTUAL SIZE



Industrial applications include speed, position and limit sensing and parts counting for various process control systems. ISC*Magnetics Pick-Ups are particularly well suited for space application because of their low power consumption, operation from logic power bus, freedom from EMI (these Pick-Ups have no internal choppers or oscillators) and freedom from the need of an actuator mechanism (as in the case of conventional limit switches). ISC*Magnetics Magnetic Pick-Ups exhibit a very high reliability.

ISC*Magnetics' staff of engineers is ready to discuss your particular requirements. PREDETERMINING COUNTERS

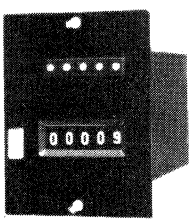
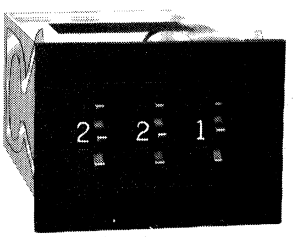
EVS13.11 **EVS15.13**
These two predetermining counters count down from the manually preset number to operate a built-in SPDT switch as the number wheels pass from all zeros to all 9s. Manual or optional electrical or automatic reset returns wheels to preset number and counter is ready to start again. Numbers are preset by holding in reset button, lifting locking bar and indexing up number wheels to preset position with small rod supplied or by built in pushbuttons.

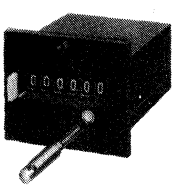


EVS25.13
This counter operates just like the two at left except that it has a presignal-SPDT switch-set at the factory to operate a fixed number of counts before the final number of counts before the final or end SPDT switch is operated.

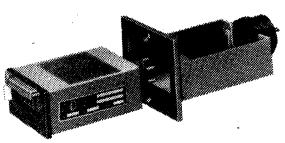


TW-3
For use where batch size or preset number is changed frequently. Operator manually sets in thumb wheels to preset no. The counter wheels then count down to actuate a SPDT 5 amp switch at 0. Preset number must be then set in again. Adding version permits starting at any number and counting up.

Some Optional Features



Spade key reset to prevent against unauthorized reset.



Plug-in mounting provides easy removal

POWER MONITORS

Logitek Power Monitors are used to sense voltage, frequency and phase characteristics of single or three-phase power lines, allowing normal operation of system loads when the power line characteristics are within predetermined limits. In the event that either voltage (any phase) or frequency is not within specification limits, or the phase sequence is other than ABC, the relay de-energizes to operate alarm indicators or system shut-down contactors.

AC VOLTAGE SENSOR

Logitek Voltage Sensors are used to sense voltage on single or three-phase power lines, allowing normal operation of system loads when the voltage characteristics are within predetermined limits. In the event that the voltage (any phase) is not within specification limits the relay de-energizes to operate alarm indicators or system shut-down contactors. Voltage sensing is accomplished with the use of an "RMS" type detector and is insensitive to line distortion.

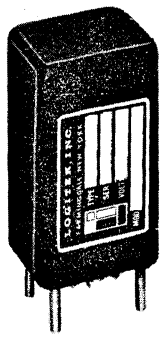
DC VOLTAGE SENSOR



These Voltage sensors are used primarily as D.C. voltage monitors to provide alarm or power disconnect when the voltage is beyond pre-determined limits. They may be used to operate a power disconnect contactor or to provide signal voltage to a control panel warning light, and are designed so that normal voltage transients do not falsely trigger alarms or cause equipment shut down.

❶ WHAT IS AN E-CELL DEVICE?

An E-CELL device is a new kind of circuit element that looks like a discrete electronic component but does the work of a complete electro-mechanical assembly. Its main functional part is a center "working" electrode, which is surrounded by an electrolyte. The unit's metallic container also serves as the second ("reservoir") electrode. Functionally, an E-CELL unit is a reversible micro-coulometer. By plating the "working" electrode, it converts electrical current-time integrals (up to several thousand microampere-hours) into equivalent integrals of a mass of metal. Exactly one atom is transferred for each electron impressed on the E-CELL unit. Power drain is normally in the microwatt region. If the "working" electrode is then deplated at a known current, the deplating time will be proportional to the original integral. When a known mass is given as part of the initial condition (i.e. is preplated on the "working" electrode), this same process generates a precise time interval. The unit abruptly changes from a low-resistance to a high-resistance circuit element when its "working" electrode is completely deplated.

❷ HOW DO YOU USE AN E-CELL DEVICE?

An E-CELL device has two generic functions: integration and timing. In both areas, the device is characterized by: electrical stability; small size; insensitivity to the physical environment; compatibility with the low current and voltage levels of modern circuitry; and the ability to operate over an extremely broad time domain. Compared to conventional mechanical and electro-mechanical devices which perform similar functions, an E-CELL device is much lower in cost.

For integration applications, an uncharged E-CELL unit accepts d-c, periodic, or random inputs in any waveshape — and stores the integral of these on the "working" electrode. To read out the stored value, the mass transfer process is reversed. The measured time to reach the point of the abrupt voltage swing, multiplied by the read-out current, gives a precise value which represents a total count of the stimuli presented to the unit. The Model 300 EDR Digital Readout Instrument provides a convenient means of making these measurements.

Operation in the timing mode is essentially the same as that for integration. The E-CELL unit is pre-charged with a known mass of plating material. In operation, this mass is transferred to the "reservoir" electrode (container) at a constant known rate determined by the current value used. When the "working" electrode has been deplated, an abrupt voltage swing signals that the pre-set time has elapsed. This signal is normally used as a bias transition with semiconductor devices.

❸ APPLICATIONS

The scope of applications is as broad as counting and timing functions themselves. We have a repertoire of many convenient, economical circuit designs that have been proven in actual field use. Our experienced applications specialists will help you apply E-CELL coulometric techniques to your particular problems. Representative applications: **REPETITIVE TIMING AND CONTROL** Repeat cycle timing for domestic and industrial appliances. **PULSE COUNTING AND MEMORY** Adding and subtracting pulses. Counting events for vending machines, traffic, etc. Confidential memory for security devices. **CURRENT-TIME INTEGRATION** Battery charging controls. Environmental monitoring. Data accumulation. Laboratory integration in physics, chemistry, meteorology, etc. **USE-TIME MEASUREMENT** End-of-life, elapsed time, and warranty indication. Use-accounting for office, automotive, or industrial machines. **TIMING** Ordnance, safing and armng devices. Sonobuoy scuttling. Long delays (months).

PANEL-MOUNT TIMERS

SERIES DPB — DELAY RELAY

A fully adjustable synchronous motor driven Delay Relay for front panel installation. May be wired as Delay Relay or as Interval Timer. Available in one or two pole models at 10, or 15 ampere switch capacity, in over one hundred time ranges from one second to one month.

Operator selects delay (interval) time by manually setting dial to desired value, which remains fixed until operator readjusts dial to new value, which may be done while motor is energized or reenergized.

Push on button causes clutch to disengage mechanically, permitting timer to back off of load and timer motor switch(es) and permitting spring-powered reset to set position. Removal of finger from button permits clutch to reengage and commences timing cycle (see Table A).

Please advise with your Order, your desired program for second switch of two-pole units.

SERIES FLR — PROGRAM TIMER

A simple cam program timer for front panel installations, with rotating dial indication of angular position. Synchronously rotating cam shift programs switches sequentially when motor is energized.

Friction clutch permits manual positioning, whether operating or deenergized.

One through five or more poles. Choice of 10, 15, 20, or 25 ampere switches. See Table A for available cam shaft speeds (Time per Cycle).

Cams are fully adjustable. Prices include settings to your Timing Diagram. May be wired for single-revolution-and-stop.

Use as programmer, flasher, interruptor, pulse accumulator, delay or interval timer, power operated sequencing or selecting switch, stepping switch, reversing timer.

Specify Series FLR (as shown) for repeat-cycle-construction.

Specify Series INM (similar) for manually settable Interval Timer construction with stop-pin at zero degrees of rotation (off position of Dial).

SERIES DRM — DELAY RELAY

A fully adjustable synchronous motor driven Delay Relay for front panel installation. May be wired as Delay Relay or as Interval Timer. Available in one, two, or three pole models at 10, 15, 20, or 25 amperes switch capacity. Available in Time Ranges 6, 12, 18, 25, 40, 75, 150, 300, and 500 seconds.

Operator selects delay (interval) time by manually setting dial to desired value, which remains fixed until operator readjusts dial to new value, which may be done while motor is energized or deenergized.

Operation is initiated upon energizing motor which causes timer to "time down" to zero transferring load switch. Timer backs off load switch and resets to set position when motor is deenergized, ready for next usage.

Please advise with your Order, desired relative time program among switches of multi-pole units.

At less cost, order Series DRF if adjustability is not needed. Identical to Series DRM, but delay time is fixed at factory to any value you specify between 0.5 and 500 seconds. No front dial.

SERIES IPB — INTERVAL TIMER

Yields a precise fixed timed interval upon operation of feather-touch pushbutton.

Transfers a snap-action load switch at start of fixed cycle when pushbutton is depressed. Return-transfers this switch at exact end of fixed time cycle. Time Ranges per Table A.

Select your choice among hundreds of available time cycles. Choice of one, two, or three poles. Choice of 10, 15, 20, or 25 ampere switch ratings. Prices of multiple units include timing to your Timing Diagram. Extra poles of multipole units may be within-cycle programmed.

Available on fast delivery from stocked and standard components and subassemblies.

SERIES PER — PERCENTAGE TIMER

Series PER Percentage Timer is a repeat-cycle timer with unique within-cycle adjustability.

A latching mechanism holds a load switch transferred during an adjustable percentage of each consecutive fixed-time cycle. Each synchronous rotation of timer's camshaft is divided by dial adjustment into "ON" time and "OFF" time of load switch, expressed as percentage of repeat-cycle time.

Either side of the single-pole double-throw load switch may be used for controlling "ON" or "OFF" a percentage of repeat-cycle time. Or both sides may be used, for proportioning or metering applications.

Series VPP Variable Pulse Programmer is identical to the above, but also incorporates an additional pole for straight programming functions, thus providing unusual system timing capabilities. Series VPP may be wired for single-revolution-and-stop operation.

Choice among hundreds of operating speeds (see Table A). Choice among 10, 15, 20, or 25 ampere load switches.

Series DPB, FLR, INM, IPB, PER, VPP

- Employ Inductor Motor Type A.
- "H" dimension is 7/8" nominal (1 3/16" for speeds slower than 1 R.P.H.).

Series DRM, DRF

SOLID STATE AUDIO INDICATORS

These are highly reliable audio indicators. There are no moving contacts; therefore, problems of arcing, electrical interference or RF noise are eliminated. *Operation:* A semiconductor drives a vibrating reed coupled to a plastic diaphragm; the coil is enclosed in a magnetic pot core. An audible warning is produced as soon as the voltage is applied. Sound output is in the range of 400 Hz to give extra audible penetration.

Typical Applications: Automotive and other vehicular warning systems, metal detectors, fume detectors, depth finders, audible tuning devices, monitoring systems, SWR alarm circuits, continuity test sets, timers, medical instrumentation, telephone sensors, home alarm systems and many other devices requiring audible signals. Model GA 100-12 available for low temperature applications to −55°C.

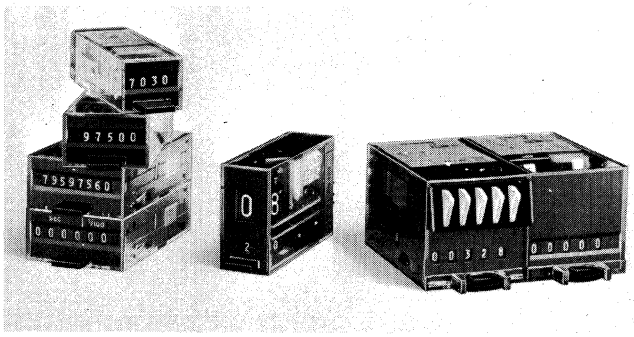
Guide to Sodeco impulse counters

✱The Sodeco R-Series: Up to 200,000,000 counts and speeds to 60 ips



Inside their rugged, clear packages, Sodeco's new R-series impulse counters pack many times the life of any other counter on the market. The most advanced counters you can buy, they're Swiss-engineered for greater precision, quieter operation, no missed counts. Instead of all the usual rattles, vibration and wear associated with standard ratchet mechanisms, our special escapement mechanism keeps them working better longer. Compact plug-in modules with power consumption as low as 0.8W are compatible with the most advanced solid state instruments and systems. Standard ± 15% voltage tolerances and a capacity for operating with a wide variance of pulse waveforms provide a maximum safety margin. For more details on R-Series counters check the asterisked items in the application categories below.

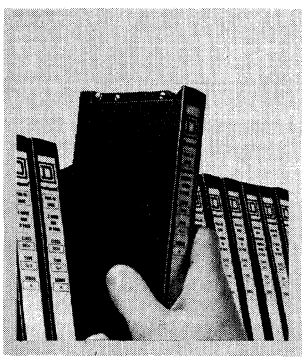
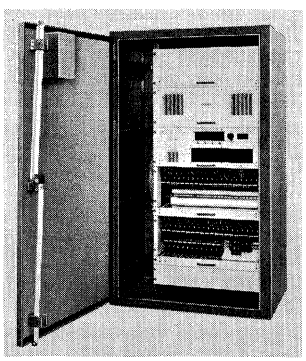
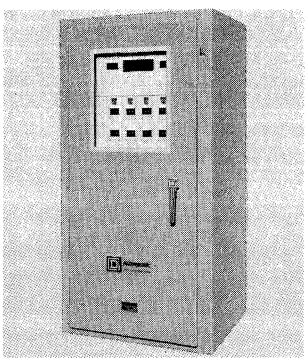
Complete control systems capability.



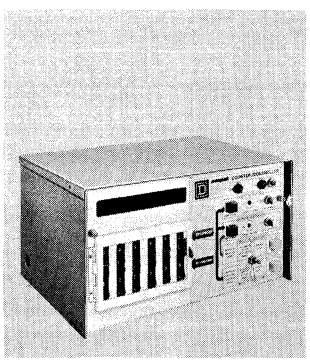
Plug-in NORPAK® is an advanced solid state logic system that provides many convenience and reliability benefits. Plug-in modules are easy to replace. All interconnections are in the back plane but wire changes are still easily accomplished. Plug-in components are protected by a phenolic case that is held in place by two captive screws. Plug-in NORPAK provides maximum design flexibility for fixed sequence control, data storage or counting functions. A complete line of logic functions and accessories are available.



The Program Sequence Controller is an inexpensive solid state controller, quickly and easily programmed to handle a wide variety of control problems. It accepts multiple inputs and produces multiple outputs in any sequence. It is modular in design and expandable to suit most applications. It has up to eight different time delays with individual adjustments. It requires no special programming language and can be programmed for alternate sequences. The Program Sequence Controller can be re-programmed and the modular components can be easily replaced. It can be linked to a computer for monitoring purposes.



NORPAK® Demand Control is the way to reduce monthly electric bills. Savings are generated by limiting the power usage in peak demand intervals throughout the billing period. The limiting is accomplished through automatic load control. Typical controlled loads might be electric furnaces, electric heat, electric boilers, air conditioning, or other loads which, when shed, will not affect user efficiency. NORPAK Demand Controllers are available in two sizes: Commercial, for one controlled load and Industrial (pictured above), for multiple loads.



NORPAK® Solid State Counter/Controller is the economically priced answer to industrial bidirectional counting applications requiring high speed, precision and reliability. It comes completely assembled and ready to work. Plug-in decade modules allow tailoring to the job. Three to six decade versions with in-line readout as standard. Power supply has extra capacity to drive rotary pulse generator circuits or additional NORPAK logic. Solid state amplifiers, rated 1 ampere continuous at 120 volts ac, supply an adjustable timed output pulse of up to one-half second. Table-top, rack or cabinet mounting. Anti-bounce circuits for contact inputs. Both automatic and manual reset.

GLOSSARY and GENERAL INFORMATION

THYRISTOR: POWER

A switch that is either on or off (bistable). A semiconductor, solid state switch with no moving parts . . . capable of operating at extreme speeds with excellent electric power capabilities, both voltage and current, under either continuous or high surge conditions. An hermetically sealed switch, silent in operation, static, compact and free from the effects of ambient shock and vibration levels. When correctly chosen and utilized with proper protection, thyristor switches possess practically unlimited operating life even under the most severe environment. Available from ½ amp. to 1,700 amp. steady state and to 14,000 amps. non-repetitive inrush and up to 2,500 volts. Thyristor switches may be turned on with only a few millionths of a watt and a few millionths of a second turn on signal. Thus, for example, one part signal can control ten million parts power. This most amazing characteristic enables the control of very high power circuits by means of inexpensive, low level sensors, such as light sensitive cells, heat sensitive resistors, magnetic sensitive resistors and countless other devices. For many applications, thyristor switches represent the most economical, versatile and reliable means available. Power thyristors are three terminal p-n-p-n regenerative feed back pairs and classified as either unidirectional or bidirectional reverse blocking triodes. More common designations are SCR and TRIAC.

THYRISTOR: CONTROL

A switch that is either on or off and may serve to control a power thyristor or other solid state or electro-mechanical applications. A specific threshold switch that triggers when the control force exceeds the threshold level. A semiconductor, solid state switch with no moving parts operating at high speed and the lowest power levels. Silent, sealed, free from the effects of shock and vibration, extremely low in cost and possessing almost unlimited electronic control application capabilities. Control thyristors are available for every application . . . commercial, consumer, aerospace, industrial and military. Some control thyristors are as follows: 1. PUT, Programmable unijunction. 2. DIAC, Bidirectional diode. 3. LAPUT, Light activated programmable unijunction transistor. 4. SBS, Silicon bilateral switch. 5. SUS, Silicon unilateral switch. 6. ASBS, Assymetrical silicon bilateral switch. 7. LAS, Light activated reverse blocking diode. 8. LASCR, Light activated silicon controlled rectifier. 9. SCS, Reverse blocking tetrode thyristor. 10. LASCS, Light activated silicon controlled switch.

THYRISTOR: HYBRID

Thyristors used in combination with other solid state components either discrete and/or I.C. or with electro-mechanical devices to provide a variety of power controls most efficiently at low cost.

PHASE CONTROL

A system of fast ON-OFF switching of a power thyristor connected between alternating current supply and load providing supply for a controlled part of each cycle. An efficient system for controlling average power to lamps, heaters, motors, transformers, power supplies, etc. A control thyristor, usually a unijunction is used to trigger the power thyristor at the exact time into the phase angle of the AC wave. The power thyristor will then latch into conduction and stay on for the remainder of the half-cycle. Phase control is available from almost zero to full power either half or full wave.

PHASE CONTROL: SYMMETRICAL

Phase control in which the negative and positive portions of the wave are equal thus excluding DC components which could cause problems when phase controlling inductive loads such as transformers, due to saturation of the iron core. It is most important therefore, that applications for inducive loads not use ordinary light dimmer type circuits when symmetrical phase control is indicated.

ZERO VOLTAGE SWITCH

An on-off switch that turns on when AC voltage is near zero at the start of the half cycle and turns off when the voltage is at zero at the end of the half cycle. This technique eliminates radio interference and other noises that are produced from random turn on or off electric loads. This is particularly pertinent where frequent recycling occurs, as for example, heater loads controlled by slow acting thermostat switches. Thyristor systems are ideal for eliminating interference problems due to current interruptions since these systems can only turn off when on state current is at near zero, regardless of power factor. Similarly, they can be made to latch on when the current begins to flow.

PROPORTIONAL CONTROL

Control in which the amount of corrective action is proportional to the amount of error. This control can be achieved either from a control of the phase angle as in phase control or from the fast periodic switching on-off as in zero voltage control. Typical applications are heaters and air conditioners. Important parameters in the design of proportional control systems are: 1. Type of load. 2. Tolerable RFI level. 3. Proportional band. 4. Sensor time constant. 5. Switching period. 6. Differential. Thyristor systems are ideally suited for these applications.

SOFT START-STOP

The gradual application or reduction of line voltage to a motor, transformer or other inductive load in order to limit inrush current, transients or other shock factors resulting from abrupt changes. For example, inrush current to transformers, especially hypersil and those with little "air space," can rise to nine times steady state current. This excessive inrush can cause damage to switches, transformers, etc. An automatic soft start system applies a linear voltage ramp and limits currents to the proper level. Thyristor systems are ideal for this application.

PULSE

A momentary, sharp change in a current, voltage or magnetic field that is normally constant. Thyristors are readily triggered on from pulses of short duration such as those delivered by charged capacitors and unijunction triggers. This characteristic enables easy thyristor isolation by means of pulse transformer. Other advantages are precision control, compactness, control from low energy sources and overall economy.

SENSOR and TRANSDUCERS

A device that senses a change in a physical parameter such as light, temperature voltage, current, etc. and converts the change into a useful input signal for control purposes. One classification is the resistance type . . . that is, the resistance varies with the physical parameter. This includes thermistors, magnistors, light sensitive resistors, etc. A second classification includes energy producing devices such as piezo-electric, electro-dynamic, electro-chemical, photo-electric, thermocouple, etc. All sensors and transducers make excellent primary detecting elements for low cost thyristor control.

SOLID STATE RELAYS & HYBRID RELAYS

Triac Electronic Systems specializes in the design and manufacture of Solid State Relays & Hybrid Relays. The genuine thyristor is the heart of all such devices.

Solid State Relays are indicated in applications where long life cycling or high inrush currents, or great speeds or sophisticated design such as zero voltage, phase control or soft start is required.

It is essential when choosing a solid state relay to work closely with a knowledgeable supplier. Solid state relay design is an area of expertise unto itself.

Triac truly majors in this field, providing the most advanced state of the art and OEM design at low cost. A solid state relay should be designed for your exact application to avoid unnecessary "extras." Perhaps a hybrid would better suit your requirements?—A relay with electro-mechanical input, such as a reed relay to gate the triac? Or should the output be shunted with mechanical switching closure? Or perhaps both? These are some of the questions to be answered.

Triac is prepared to assist you in these design questions, makes available to you their diversification and field experience and welcomes your inquiry.

You can choose from a broad line of designs, sizes, mountings, configuration, speed, termination and specialized applications. Solid State Relays are available for phase control, soft start and zero voltage switching.

TIMERS: ELECTRONIC

Triac Electronic Systems timing relays provide the most advanced state of the art industrial timers at low price levels.

Through improved genuine thyristor circuitry, many problems often encountered with conventional R-C timers have been eliminated. Timers are available all solid state or in combination with electro-mechanical components.

Triac diversification and volume in thyristor system design enables it to set new standards for OEM design at low cost. For example, the newly developed TTB simple timer for P.C. board application is as low as $4.00 in 1,000 qty. At slightly higher cost is a two stage timer switch designed for the automation industry, where a fixed output pulse is required regardless of duration of input pulse. These modules are compact, reliable and truly economical. In addition, a most comprehensive line of conventional and special timers are available as follows: SIMPLE DELAY . . . OFF/ON DELAY . . . SEQUENCE and MULTI-STAGE SYNCHRONOUS . . . PRECISION . . . SINGLE SHOT CONTROLLED PULSE . . . REPEAT & RECYCLE . . . ZERO VOLTAGE . . . PHASE ANGLE . . . SPECIAL INDUSTRIAL . . . SPOT WELDER SEQUENTIAL . . . CASCADING and MANY OTHERS.

We can satisfy the most versatile design requirements such as: timing range, operating voltage, current switching capability, accuracy, mounting, packaging, environmental condition, protection from line transient and noise, etc. We can probably fulfill your exact requirement without imposing unnecessary "extras" thus providing substantial savings to you.

Triac manufactures a series of automatic multi-function programmers combining thyristor technology with electro-mechanical devices. These programmers provide automatic sequence control for automation and industrial process. Stepping action is based upon time interval or any other physical parameter such as speed, acceleration, temperature, pressure, level control, etc. Interlocks, safetys and other controls may be programmed.

Triac offers its complete design facilities to you to help solve your particular application and welcomes your inquiry without obligation.

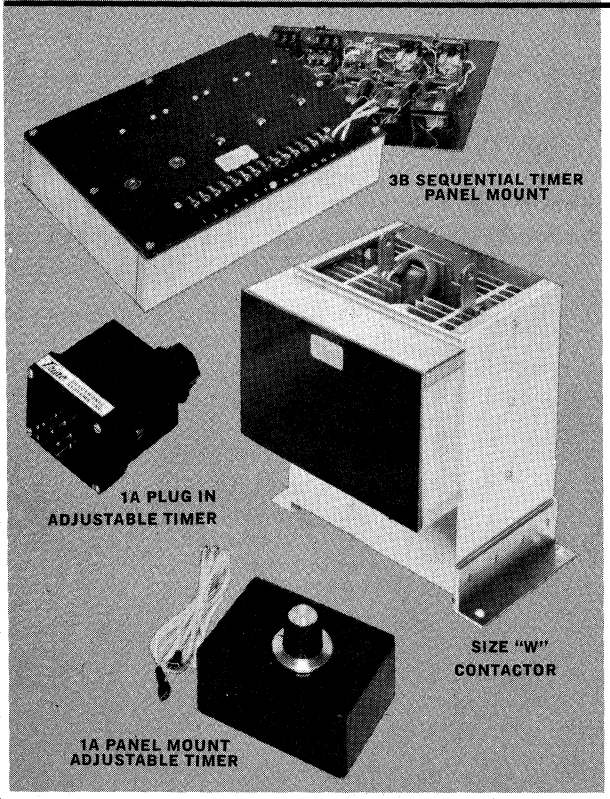
SOFT START. The gradual, automatic application of line voltage to mechanical or electrical "inertia" application in such a manner as to limit inrush and provide gradual starting. Triac provides a variety of soft starts utilizing genuine thyristors for motor control, transformer switching, incandescent networks, etc. Also available are economical up and down "ramps" for lighting aesthetics and psychodelics.

PHASE CONTROL & VARIABLE TRANSFORMER. Equivalent to auto-transformer application except that size, weight, cost and versatility are superior. Manual and automatic systems featuring genuine thyristors are available from ¼ to 1,000 amps at all voltages.

POWER LINE BOOSTER. Transformer and genuine thyristors provide automatic line voltage corrections in case of "brown outs". Particularly suited for sensitive power equipment such as computers, air conditioners, medical electronics, machine tools, etc. Voltage deficits automatically or manually brought to full level thus insuring continued operation regardless of "cut back" by the utility. These line boosters are manufactured in a variety of sizes for single or three phase. They are extremely reliable and relatively inexpensive.



WELDING POWER CONTROLS... SYNCHRONOUS & NON SYNCHRONOUS

Resistance welding control combinations with built in heat control, automatic power factor correction. Modular industrially proven design. Genuine thyristor contactors. Soft start techniques. Triac Electronic Systems' extensive involvement in the science and volume production of high current AC switching systems enables it to offer sophisticated electronics to the welding industry at a dramatically lower cost than specialized suppliers. In many instances prices are no higher than obsolete mechanical contactors and lower than ignitrons. Thyristor contactors are available from 8 to 300 KVA at all voltages. Three phase conversion systems are also available.

These contactors are essentially equivalent to the broad line of Triac HIGH POWER THYRISTOR SYSTEMS.

WELDING CONTROL TIMERS. Triac Electronic Systems manufactures a comprehensive line of specialized timers for the resistance welding industry. Sophisticated technology plus volume applications to all industries enables Triac to offer a vastly superior timer at low cost. Every timer is protected from inductive "kicks" caused by transformer transients and is reliable and accurate. Timers are all solid state or in combination with mechanical relays. Types include, 1A, 2A, 2B, 3A, 3B, Butt, 5 Pot, etc. These timers are available as modular plug in, panel or combination packages. In addition, custom designs are readily produced. Also available are synchronous and precision types.

Triac Electronic Systems provides substantially more per dollar compared to specialized manufacturers who supply the resistance welding industry exclusively. The rapid pace of development and obsolescence, the immensity of the electronics industry and the high cost of development make diversification and volume imperative for value and reliability. Triac Electronic covers the full spectrum of thyristor electronics and passes the benefit to you.

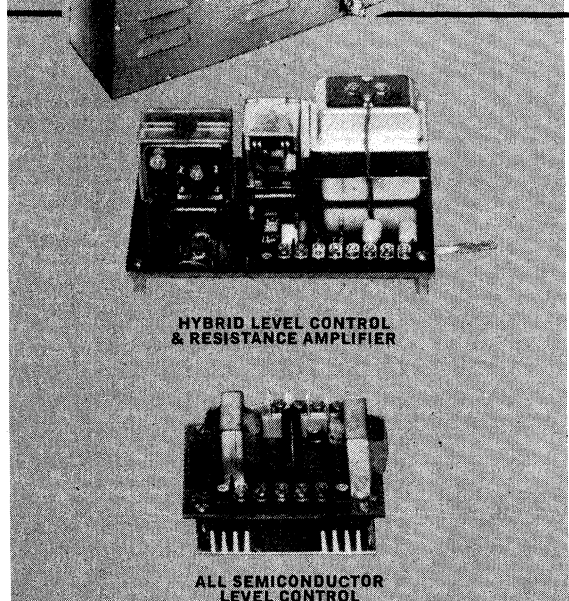
BOILERS — STEAM GENERATORS

Triac Electronic Systems manufactures several electronically controlled small boilers with a variety of steam pressure and temperature capabilities. The use of thyristors to control boiler water level, on/off switching and proportional steam control from electric power represents advanced state of the art resulting in economy of operation, versatility and high safety margins. In addition, an important advantage of the sophisticated low cost electronic system is the ability to control superheated steam and the precision flow of steam where steam itself is used as an energy or control source. The fluid and high energy nature of steam properly controlled and implemented is in natural simbiosis with thyristor electronics. Many frontier applications are available to this combination which neither energy system could fulfill alone. Triac is involved with many of these systems and invites you to explore their possibilities.

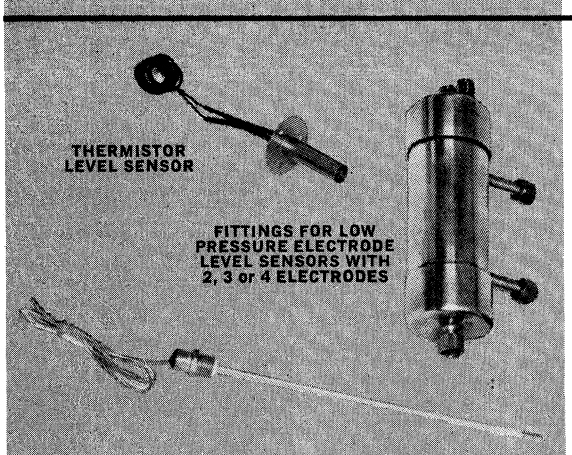


BOILER LEVEL — RESISTANCE LIQUID LEVEL CONTROL — RESISTANCE SENSING AMPLIFIER

Genuine thyristors make ideal components for boiler water level control, liquid level control and resistance sensing amplification. High reliability, low cost, amplification factor and direct "in line" capability make these devices the almost perfect component to control liquid level. The absence of water or other liquid resistance denotes low level and can trigger the thyristor to turn on pump or solenoid directly, sound alarm or give visual display. Triac can provide a number of low cost level systems, complete with stainless steel or platinized titanium sensors for almost any fluid. For non-electrically conducting liquids or for gasses, Triac can supply thermistor controlled level systems. Operation is based upon a calibrated energy supply to the immersed thermistor sensor and the ability of the specific heat of the media level to influence the equillibrium of the thermistor. Ordinarily involved circuitry is required, but with genuine thyristors this becomes simple and inexpensive. Level systems can be provided with offset or time interval differential. Interface with other sub-systems such as flame or smoke control is easy. Alarm, safety or manual reset are standard. Reliability and low cost are well indicated.

In addition, these controls make inexpensive resistance sensing amplifiers. When the external circuit resistance exceeds the set point a signal triggers the thyristor on or off and control is achieved. Sensors may be photoelectric, thermistor, magnistor, etc. Resistance ranges in Ohms, are: 10, 100, 1000, 100,000, and 1,000,000.

Triac welcomes your inquiry and is ready to assist you.



LIQUID LEVEL ELECTRODE SENSORS PROBE ASSEMBLIES — FITTINGS

Triac manufactures a wide line of liquid level sensors and probe electrode assemblies to accommodate corrosive and non-corrosive liquids for a variety of temperatures and pressures. Electrodes are available with pressure tight assemblies for vertical suspension from top positions or with pressure tight fittings for side mountings. Such fittings can contain one to four electrodes of specified length. Housing is made from cast iron, aluminum or stainless steel. Bottom blowdown and gauge glass fittings are also supplied. Electrodes are metallic rods of non magnetic stainless steel, platinized titanium, or platinum wire. These rods are fitted with double layers of Teflon (Du Pont registered T.M.) sleeving for maximum reliability and performance. Except for the mechanical trim adjustment access screw, the entire oscillator package is hermetically sealed to assure long term reliability. Standard options include choice of operation on either 12 Vdc (±5% regulation) or 5 Vdc (±1% regulation) supply voltage. All standard units are designed for mounting on PC boards. Custom options include special case sizes, mounting brackets and output terminal configurations.

VOLTAGE CONTROLLED (VCXO) CRYSTAL OSCILLATORS

Bliley voltage controlled crystal oscillators combine inherent crystal stability and voltage controlled frequency deviation in a single solid state device. Performance characteristics are realized through careful selection of crystal parameters together with the associated oscillator and reactive components. Center frequencies may be specified in the range 1-50 MHz with performance characteristics as listed in the following table:

CRYSTAL FILTERS

BLILEY CRYSTAL FILTERS are custom engineered devices that may be supplied with a wide variety of characteristics over the frequency range in which quartz crystal resonators can be produced. With over forty years of experience in the design and manufacture of quartz crystal resonators, Bliley offers a unique combination of crystal technology and filter design capability for your custom applications.

A general guide for determination of bandwidth limits is presented in Table 1. The chart on Page 9 of Bulletin 529K provides greater detail for various segments of the frequency range. Selectivity (the ratio of 60 db bandwidth to 6 db bandwidth) is generally a compromise between desired performance and economics. Typical selectivity is 2, with requirements of 1.5 not uncommon. Passband ripple, for narrow band filters, is normally 0.3 db with 1 db maximum over the temperature range −55° to +90°C. Wide band filters typically exhibit 0.5 db ripple and very wide passbands may exhibit 2 db ripple at temperature extremes.

TABLE 1 Range kHz	Bandwidth % at 6 db Min.	Max.
100-250	.05	6
200-400	.04	5
300-600	.035	5
1000-5000	.01	2
5000-20000	.02	2
20000-30000	.03	1

The following listing presents a sample of typical Bliley filters showing performance characteristics that have been established. Our design range covers Butterworth, Gaussian (linear phase), Chebyshev, band reject, and comb sets including contiguous comb sets.

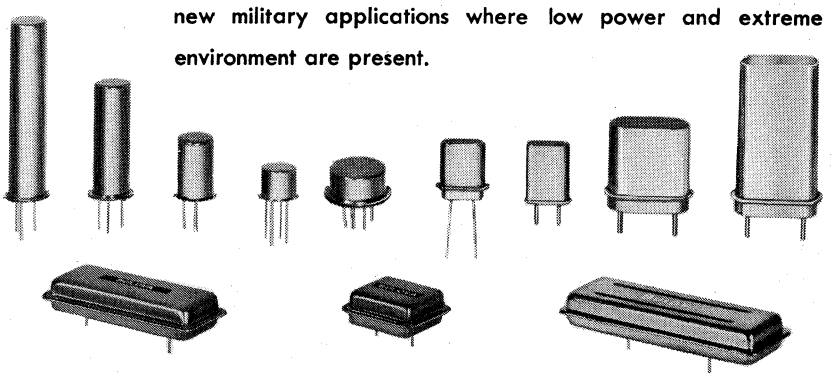
- Motional parameters of L and C can be held to within ±3%.

A COMPLETE LINE FOR ALL APPLICATIONS IN A FREQUENCY RANGE OF 2,000 Hz THRU 180 MHz

Commercial: Crystals for Aviation, Marine and Data communications equipment. Manufactured to the highest quality in standard type holders or modified to suit special designs.

Military: Bulova produces all the standard military "CR" types and is Q.P.L. on most of the current "CR" types. Designs crystals for new military applications where low power and extreme environment are present.



Coldweld Sealed Crystals—

Bulova has extended the developmental perimeter of coldweld types to provide a more miniaturized package with a broader frequency output. A support facility has been built capable of handling volume production. Series 100 coldweld holders consists of twelve (12) configurations which include the seven (7) main military types. The military crystals fit within the dimensional requirements of the military drawing.

Features:

- High Quality-High Reliability
- Tolerances as close as 3 ppm of nominal can be held on initial adjustment.
- Aging rates up to 3 pp 10^8 per week.
- Small package/broad frequency capability.

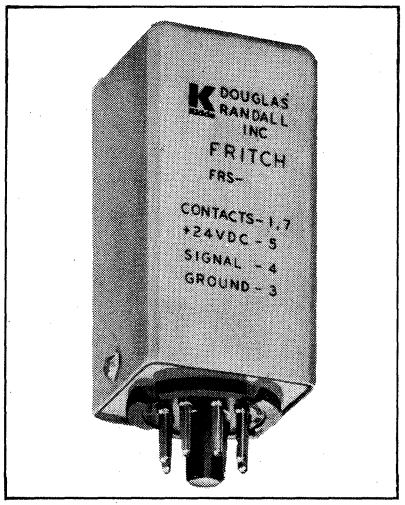
FRITCH® — Frequency Responsive Switch



The FRITCH is a sensitive rapid tone decoder. Frequency detection is accomplished by active filters, and a reed relay provides the output on standard units. Custom units are available with solid state switching.

Two basic types are supplied — Type I for single tone use and Type II for use where several tones are present simultaneously.

FRITCHES are available in octal plug housings or for P.C. boards.

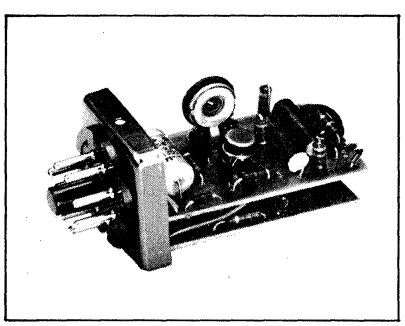
Oscillators



Douglas Randall Oscillators are solid state RC devices. The oscillator circuit operates continuously. The output stage is gated to a low impedance driver circuit, insuring extremely rapid signal response and freedom from frequency shift due to keying. Keying is accomplished by connecting the proper terminal to the power supply common (see schematic). The oscillators have reverse polarity protection incorporated in the unit to protect them if improperly connected. Single, double and triple tone versions are available in standard octal plug housings. They are also available for P.C. Mounting.

Soul Source

AND, in many instances*, "sole source", as well. Particularly, when **all** of the fine-print parameters must be met. Our customers will attest to the fact that we've been soul source because we understand their problems, requirements and specifications. We're completely responsive to their needs. When they've a problem in systems implementation, time, temperature, frequency, crystals, filters, oscillators, controlling or counting, people usually call us first. After all, solving problems in these areas . . . or telling people that we can't . . . is how we've built our reputation. Both customers and non-customers will tell you it's true. And, it's good to be true.
Matter of fact, we're seriously thinking of adopting a customer's suggestion for the slogan of our company: "People doing things that matter . . . imaginatively!"

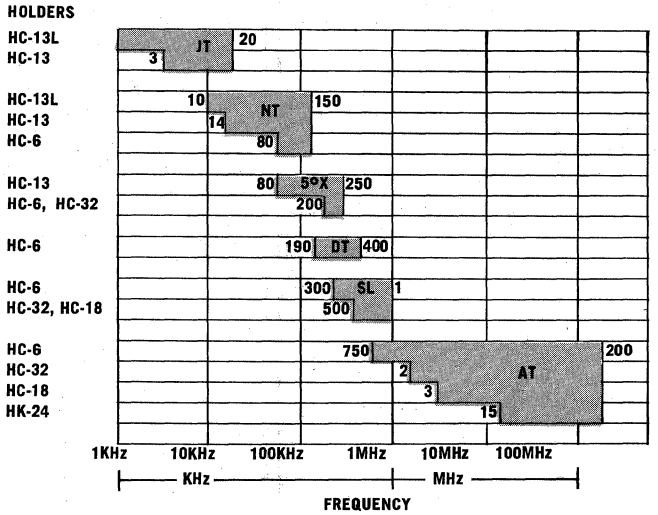
QUARTZ CRYSTALS

MAJOR CRYSTAL TYPES—FREQUENCY vs. HOLDERS



The JT Cut and the Reverse JT manufactured by Erie Frequency Control covers the frequency range from 400 Hz to 20 KHz providing low resonant frequencies and a small temperature coefficient making this product extremely important to the stability of audio frequency controls. Crystals are manufactured to full compliance with CR-88A/U specifications covering this frequency range.

Erie is proud that one of the predecessor firms to the Erie Frequency Control Division was Hill Electronics, Inc., with specialized capabilities in the manufacture of JT crystals, both for their own use in single and very narrow multiple frequency filters, stable regulation of sonar frequency oscillators and for use in military communication gear. Erie believes it is the leading producer of audio frequency crystals. Many thousands of these units have been made for military as well as tight commercial requirements. Erie has made over 100,000 units in the 4.000 KHz to 4.4057 KHz range alone and has unique capabilities in their application to filter design.

HOW TO USE eem

electronic engineers master

1973-74

Need directory information?

EEM contains four complete directories which provide the most up-to-date information available. These directories are listed and described at the right. They appear in all three volumes, with the exception of the Trade Mark Directory which appears only in Volume 1. Directory references to Volume 4 indicate the 1973 edition, which you received in January. That copy of Volume 4 should be retained to complete the 4-volume set.

Add Volume 4/1973 to your copies of Volumes 1, 2 and 3 to make a complete set of **EEM** for 1973-74.

UNITED TECHNICAL PUBLICATIONS

Included in this volume are:

The Product Index and Directory

The Product Index and Directory (green section, page 9) lists more than 6,000 types of electronic products alphabetically, by product. Under each product heading is a complete, alphabetical listing of manufacturers who make that product. **Bold face** listings indicate which manufacturers have provided catalog data on that product in the white pages.

The Manufacturers and Sales Office Directory

The Manufacturers and Sales Office Directory (starts yellow section of each volume) lists more than 3,000 manufacturers of electronic components, materials, instruments, assemblies, systems, and key services. Provided are complete addresses, phone numbers, sales managers' names, names of application engineers, TWX numbers where applicable, selected distributors. **Bold face** listings indicate that manufacturers have provided catalog data in the white pages and that sales offices are listed.

The Distributor Directory

The Distributor Directory (yellow section, page 1594, with black edge marking) lists more than 1,000 electronic distributors and branch locations, alphabetically by distributor's name, geographically by state and city.

Need catalog information?

For complete catalog information on any product, refer to the Product Index and Directory (green section, page 9, all volumes) which provides a complete listing of all the manufacturers who supply a particular product. Those manufacturers listed in bold face with page and volume number references have provided catalog data on this product in the catalog section (white pages) where you can find the information you need. References to Volume 4 indicate the Volume 4 you received in January and which should be retained to complete your 4-volume set of EEM.

Need additional information in a hurry?

Two special telephone services are being maintained for EEM users to provide extra information you need. If you need to determine a local source of supply, just **D.I.A.L. EEM.** This toll-free service (**D**istributor **I**nformation **A**nd **L**istings), provides you with the name of a sales office or distributor in your area who can provide a needed product.
For up-to-the-minute listings of manufacturers who provide certain IC functions, **call the IC UPDATE HOTLINE.** Listings of IC functions are updated daily by manufacturers throughout the country. For information in a hurry, **just D.I.A.L. EEM** — call toll-free 800-645-9200 (in N. Y. State call collect (516) 294-0990). Or **call The IC UPDATE HOTLINE,** Dial toll-free 800-645-9201.

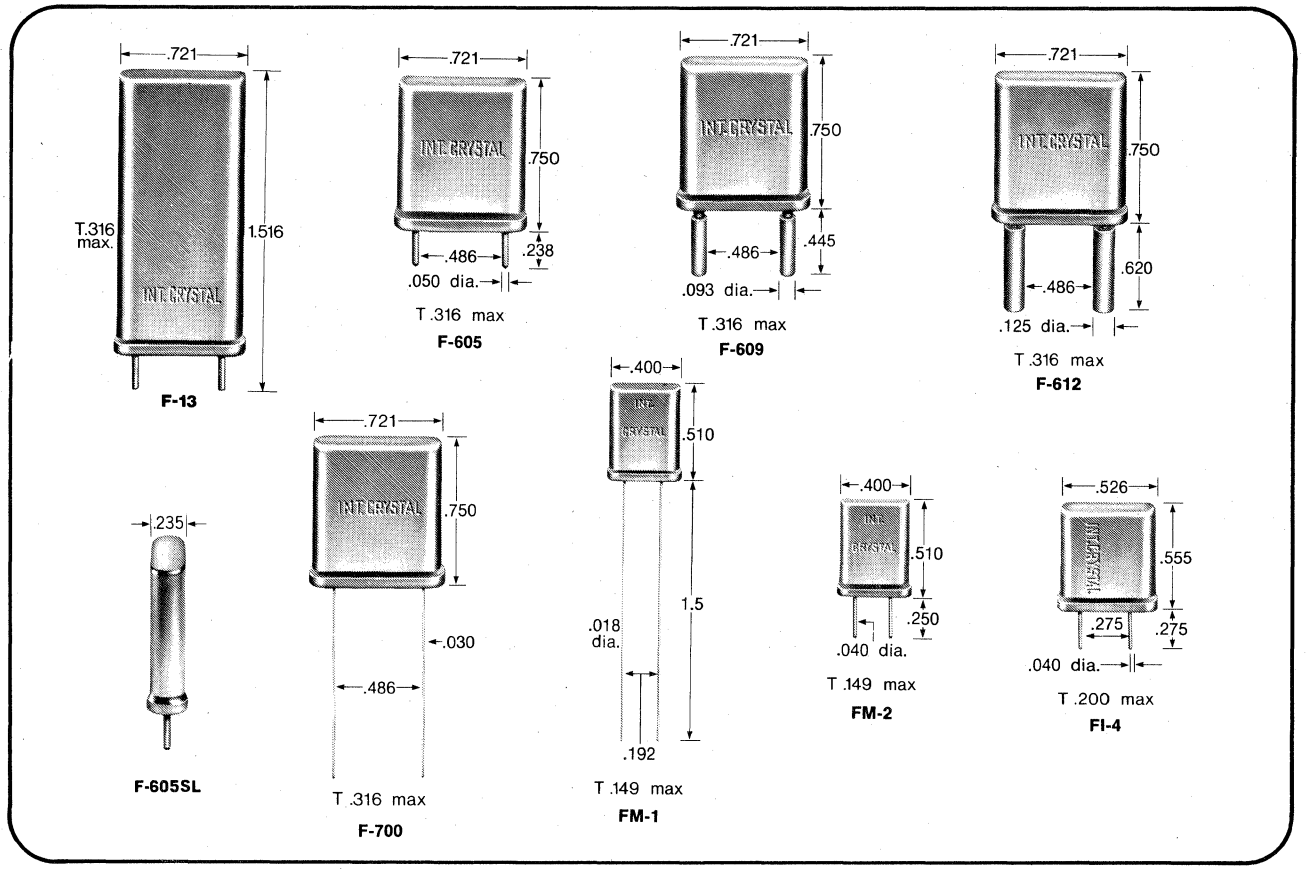
Crystals



Low frequency 70 KHz — 999 KHz

On this page we present our four* most popular crystal mountings and the data for the crystals available in these mountings according to the various frequency ranges.

mode of oscillation

70-184 KHz	Length shear 5°X
185-599 KHz	Edge shear CT & DT
600-999 KHz	Face shear AT

shunt capacitance 7 pf (Max.)

70-200 KHz	10000- 7000 ohms
200-500 KHz	6500-11000 ohms
800-999 KHz	625 ohms

drive (Max.)

70-499 KHz	2 milliwatts
500-999 KHz	10 milliwatts

REMEMBER: Just any crystal and just any oscillator will not combine to produce designated spot frequencies!

DESCRIPTION AND DATA: All of these crystals are of the plated, wire-mounted type. Low drift AT-cut blanks are used in these units above 600 KHz, and low drift CT cut blanks are used in units below 600 KHz; any crystal can be supplied for operation with or without an oven.

TYPE SPECIFICATIONS

1. **General Purpose** (GP) crystals will be calibrated to within ±.02% of frequency when operated into the customer's specified fundamental load capacitance only (32 pf will be used when none is specified). GP crystals 500-900 KHz will hold temperature tolerance of ±.005% from −30° to 60°C and ±.02% for frequencies below 500 KHz.
2. **Commercial Standard** (CS) crystals will be calibrated as noted below, as specified for operation in customer's load. CS crystals will hold temperature tolerance ±.003% −30° to 60°C above 500 KHz and ±.02% below 500 KHz.

CIRCUIT: As specified by customer. Crystals are available for all major two-way equipment and in most cases the necessary correlation data is on file. Where circuit is not specified, the crystal will be calibrated for operation into a load capacitance of 32 mmf. Typcal circuits for the different frequency ranges are shown on the following page.
The CS series of crystal units is available to commercial or military specifications demanding tight frequency tolerance, long term stability and low frequency response.

WHEN ORDERING — SPECIFY THE FOLLOWING FOR EACH CRYSTAL

A. Crystal frequency
B. Type GP or CS
C. Calibration temperature (Room Temperature or Over 60°C)
D. Holder (see above)
E. Circuit load and correlation data
Note: For GP specify 10, 20 or 32 pf. Do not specify equipment types in the case of GP crystals. These are made only to 10, 20 or 32 pf load. When circuit load is not specified crystals will be correlated for a 32 pf load.
F. Special holder markings (not available on GP type)

Consult our crystal sales engineers for special applications.

FUNDAMENTAL TYPE

TYPE SPECIFICATIONS

1. **General Purpose** (GP) crystals will be calibrated to within ±.01% of frequency when operated into 10, 20 or 32 pf load capacitance only (32 pf will be used when none is specified).
   GP crystals will hold temperature tolerance of ±.005% from −30° to 60°C.
2. **Commercial Standard** (CS) crystals will be calibrated to either .0025% or .001% as specified for operation in customer's load. CS crystals will hold temperature tolerance ±.003% −30° to 60°C.
3. A calibration tolerance of ±.001% (or special) can only be obtained when a definite circuit load capacitance and drive level are specified. Where a definite load capacitance is not specified and correlation is required from a copy of the intended circuit a tolerance of ±.01% should be expected.
4. **High Accuracy** (HA) crystals are for use in circuits where tolerances better than ±.002% −30° to 60°C are required. Tolerances of .0005% over the range −30° to 60°C will require circuit compensation. Without compensation the range will be limited to −10° to 60°C. Compensators are not included with the crystals and tolerance is for crystals only and does not allow for any change in circuit parameters over the temperature range.

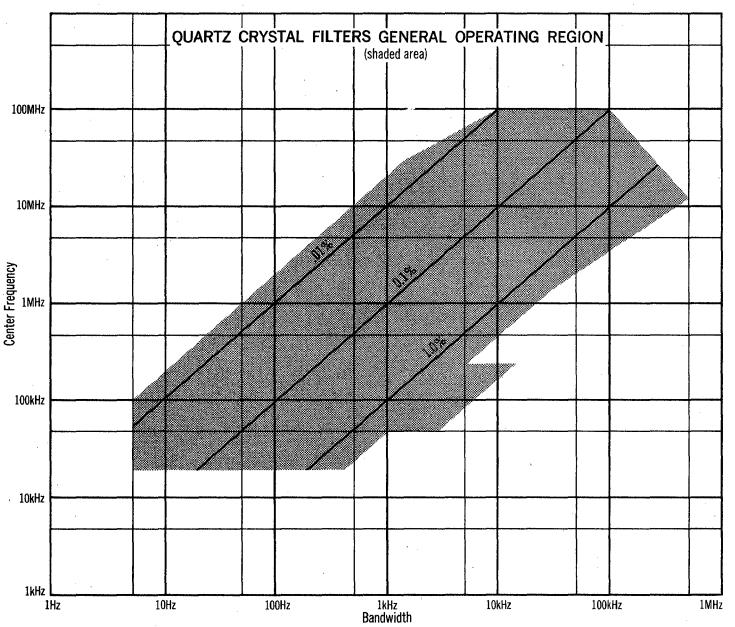
CRYSTAL FILTERS

As the nation's leading supplier of precision crystal filters, Hughes offers years of technical experience backed by the industry's most advanced production and test facilities. Thousands of Hughes crystal filters are currently in use in missiles, space vehicles, radar systems and communications equipment. Available in various frequencies, sizes and environmental standards, Hughes filter types include bandpass, single sideband, band rejection, contiguous comb doppler and thin-film monolithic.

Bandpass & Single Sideband Filters. Narrow passbands, steep shape factors and low insertion losses are characteristic of all Hughes bandpass and single sideband filters. General specifications include:

Center Frequency Range	250kHz to 100MHz
Fractional Bandwidth Range	0.002% to 6%
Shape Factor (60 db/3 db ratio)	As low as 1.15 to 1
Insertion Loss	Down to 0.1 db
Passband Ripple	Down to ±0.1 db

Note: Refer to the General Operating Regions Chart (right) to determine producible design combinations of bandwidth and center frequency.

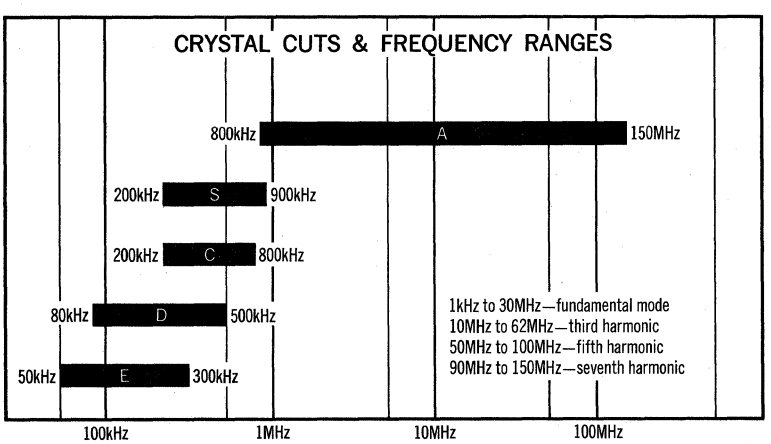


QUARTZ CRYSTALS

Hughes supplies a full range of low and high frequency quartz crystals from 250kHz up to 150MHz. Both standard and custom units in prototype or production quantities can be supplied for a variety of precision, frequency control applications.

Military Standard Crystals. Manufactured to MIL-C-3098E, Hughes military standard quartz crystal units are offered in a full range of low and high frequencies.

Coldweld Sealed Crystals. For applications requiring exceptionally high reliability and long term frequency stability, Hughes employs the Coldweld process for hermetically sealing the crystal enclosure. Only pressure is used in welding the cover to the base, thereby eliminating all possibility of contamination from fluxes, sparking or heating. Hughes Coldweld quartz crystals are available in 250kHz to 150MHz frequencies and in TO-5, HC-6 or HC-18 Coldweld holders.



Hughes is the country's leading supplier of precision crystal filters and related frequency control devices. A partial list of major programs using these products includes BMEWS, Apollo, Pioneer, Syncom, Surveyor, Mauler, Hawk, Minuteman, Talos, Phoenix and Standard Missile. A staff of competent engineers backed by the industry's most advanced quality control and test facilities, stands ready to handle your toughest assignment. PLUG IN CRYSTAL OSCILLATORS (DIP) 5404 AND 5405

FREQUENCIES FROM 80 KHZ TO 50 MHZ

The 5404 and 5405, oscillator modules in the frequency range of 80 KHz to 50 MHz, are socket pluggable. Operating from +5 volts, they deliver outputs for DTL/TTL, and with the use of filters, can provide sine waves.

The 5404 generates a specified frequency from 5 to 50 MHz with an accuracy of ±.005% over a 0 to 65°C temperature range The 5405 generates a specified frequency from 80 KHz to 4.99 MHz, with an accuracy of ±.02%. All units can drive 10 TTL loads (7400 TTL). Units above 10 MHz can drive 10 TTL loads (74H00 TTL).

The higher frequency 5404 takes only the socket space of one IC DIP package, so it can be used to plug into standard sockets, such as those made by Barnes, Elco, Augat, etc. The 5405, which generates the lower frequencies, is approximately twice the size of the 5404, and occupies the space of two DIP packages, fitting directly into two DIP sockets which are spaced 0.5" apart. Both units will mate into the Augat High Density Packaging panels (8136).

Both 5404 and 5405 are economically priced, with inherent reliability. The accuracy specifications of ±.005 and ±.02% for the 5404 and 5405 respectively is probably adequate for 95% of all applications, and removes the requirement for an adjustment control. This realistic frequency tolerance is a contributing factor in lowering the price and increasing the reliability through parts reduction.

LOW FREQUENCY QUARTZ CRYSTALS

"Low Frequency" at McCoy is defined as the ten (10) variations of cuts that are used in designing crystals from 700 Hz to 700 KHz. The ability to meet sophisticated electrical and environmental requirements reliably has highlighted the growth of our low frequency capability and is the most complete offered in the industry today. Listed below are typical tolerances and holders available.

All units are custom designed and manufactured, and innovations are our specialty.

CRYSTAL FILTERS

It is most difficult indeed to cover McCoy's capability in crystal filters in a few pages. Conventional narrow, mid, and wide band filters from 1 KHz to over 200 MHz, and monolithic devices utilizing modern computer-assisted designs are produced to demanding specifications in miniature packages. Linear phase, switchable bandwidths, single side band, and notch filters are designed under the auspices of professional design engineers possessing years of experience, thus permitting maximum latitude in meeting difficult requirements.

Listed below is a brief cross section of the devices recently produced at McCoy Electronics, along with charts establishing guidelines for bandwidths available over the center frequency ranges produced.

This logarithmic chart indicates the practical and theoretical possibilities in crystal filters. Read center frequency along X axis, bandwidth along Y axis. As a rule, filters selected near the middle of the "narrow and intermediate" band can be produced with the greatest variety of characteristics. Darkest areas show new bandwidths and higher frequencies available now.

KOLDWELD STABILITY RELIABILITY CRYSTALS

Monitor's KTO Series Frequency Control Crystals are an extension of Monitor's capability in applying KOLDWELD techniques to crystal packaging. These high reliability, low aging crystals offer precision frequency control in a subminiature package (TO-5 transistor package). The KX type crystals conform to the dimensions and requirements of standard military type HC holders and are idealy suited to extreme environments. The KX type can be used as replacements for standard HC-6, HC-18 and HC-13 mil-spec units.

MONITOR ALSO MANUFACTURES A COMPLETE LINE OF CRYSTALS (HC-6/U, HC-18/U, HC-13/U, HC-25/U) TO MIL-C-3098 (4 KHz-200 MHz). WRITE FOR OUR 40 PAGE CRYSTAL SPECIFICATION HANDBOOK.

FILTERS/CRYSTAL & LC

ORIGINATORS OF THE "INITIAL FILTER ANALYSIS CONCEPT."

Monitor's "Initial Filter Analysis Concept" can save you many hours of time, and money when specifying crystal filters.

With the increasing complexity of today's communication requirements, the initial specification of filter characteristics becomes difficult. Over or under specification can lead to significantly increased costs in the end item. Misconceptions between supplier and customer as to the exact letter of the specification can also be costly.

Purchasing's job becomes almost impossible when price versus capability must be evaluated. It can be extremely costly to choose the lowest bidder if he does not understand and have the capability of producing the network required.

To this end, Monitor would like to present for your consideration, the INITIAL FILTER ANALYSIS CONCEPT. Essentially, the concept entails taking the preliminary filter specifications based on system requirements, and designing a device to best approximate or completely satisfy the specification.

With the "INITIAL FILTER ANALYSIS" the customer receives a computer analysis in plot and tabloid form, ending in recommendations and a summary. The following is a typical "INITIAL FILTER ANALYSIS,"

Figure 1	Plot and tabulation of Amplitude, delay, phase and impedance driving point. (Note examples below.)
Figure 2	If required or desired, complete pulse response in plot and tabulation. (Note examples below.)
Summary & Recommendations	Comments are supplied as to considerations that should be taken for environmental extremes, size, packaging conditions, and if appropriate, recommended modifications of specification for cost reduction.

With Monitor's "INITIAL FILTER ANALYSIS CONCEPT," confidence of design can be assured. Please call or write Monitor Products for complete details.

MONOLITHIC CRYSTAL FILTERS

For the best in monolithic and tandem monolithic crystal filters, talk to the leader and only specialist in the field. If you're now using standard crystal filters, or if you've been holding off because of cost, size or performance, we'd like to show you how monolithics can do the job better for less. We've been making them longer (since 1967) and making more of them than anyone else.

STANDARD MODELS

For low cost, take our 10.7 MHz and 21.4 MHz integrated crystal filters. All models are available off-the-shelf. All feature tandem monolithic construction for minimum size and high stopband performance. Our 10.7's and 21.4's are available in upright, flatpack, p.c. assemblies or sets of monolithic units for assembly on your own board.

PTI also offers standard models at many other popular frequencies including 5.26, 6.46, 8.0, 16.9, 20.0, 30.0, 32.0, 75 and 156 MHz.

CUSTOM MODELS

The same cost saving techniques of PTI standard integrated crystal filters can be applied to your high volume custom requirements in I-F filtering, spectrum clean-up, parametric up-conversion and front-end filtering, just to name a few. PTI engineers will work with you from start to finish to meet your specific requirements from 5 to 300 MHz. They'll be glad to discuss performance characteristics, packaging and cost. Prototypes are usually available within 4 to 6 weeks. Specification forms are yours for the asking. Write or call. If you have questions about monolithics, we've got the answers.

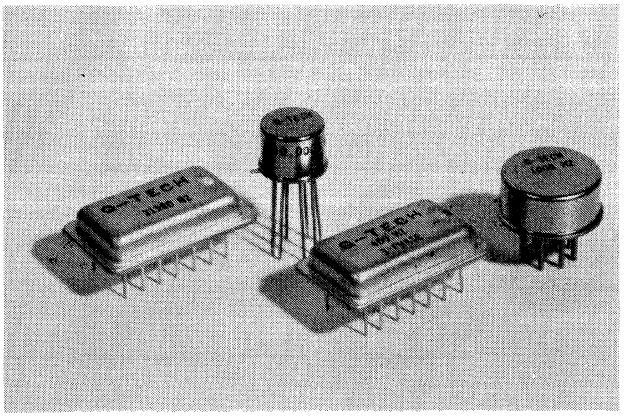
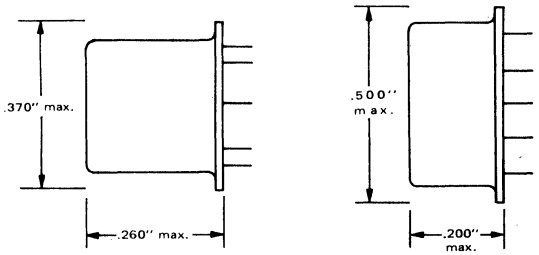
MINIATURE CRYSTAL CONTROLLED OSCILLATORS





TO-5

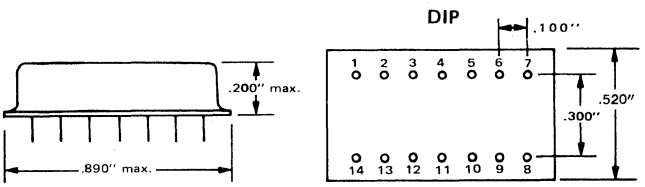
DIP



A unique design technique has been utilized to produce these reliable crystal controlled clock oscillators which have an output capable of driving a multiple TTL or CMOS load. Q-Tech clock oscillators will start under any combination of temperature and voltage. The use of hybrid technology, combined with thin film circuitry, results in an exceptionally high degree of reliability. This, together with optimum three and four point mounting of the quartz crystal results in a unit capable of withstanding high levels of shock and vibration. Life tests at 85°C resulted in 300,000 hours MTBF.

Q-Tech Clock Oscillators are available in 3 types: TO-5 (8 lead), TO-8 (12 lead), and DIP (14 or 16 lead). The TO-5 unit covers a limited frequency range, while the TO-8 and DIP both have an extremely wide output frequency range for an extensive variety of applications.

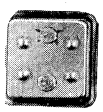
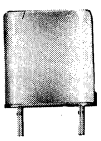
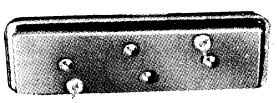
QUARTZ CRYSTALS







Frequencies from 15 KHz to 100 MHz manufactured to the highest tolerances and hermetically sealed with the latest methods.

Torotel's cold welding process provides crystals to the most severe Tolerances in the HC-38/U, HC-39/U and HC-41/U crystal holders. These holders are checked for helium leaks in 10^{-9} CC per second. Crystals packaged in this manner are especially suited for PC board mounting.

Resistance weld sealing is available **at no extra cost** in the HC-6/U, HC-18/U, HC-25/U and HC-33/U standard holders. This process uses an electrical weld to seal the crystal unit in a helium-nitrogen atmosphere. Solder balls and aging due to flux contamination are completely eliminated.

QPL-3098

In house laboratory facilities can perform testing to MIL-C-3098F. Many standard types are QPL approved and custom designs are available on request.

CRYSTAL FILTERS

Crystal filters from 10 KHz to 30 MHz are computer designed for maximum performance. Custom designs are considered a challenge. Contact Torotel's engineering staff for assistance.

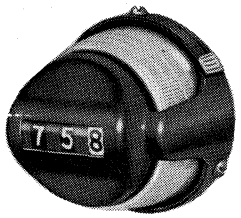
MICRODIAL® COUNTING DIALS

BUNKER RAMO AMPHENOL



1300 Series, Digital

Gives you fast, accurate indication of shaft position up to 1,000 turns. All models (3-digit 10-turn, 4-digit, 100-turn, and 5-digit 1,000-turn) mount directly on shaft to be controlled, eliminating backlash. Speed: up to 6,000 counts per minute.

Large, contrasting numerals readable even from angular view because convex windows reduce glare, reflections. Rugged, dust-sealed construction includes Cycolac[1] counter wheels, Nylatron[2] GS gear assemblies, knurled aluminum control knobs. Brake optional. Special readouts are also optional. All models conform to military requirements.

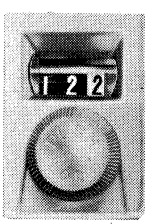
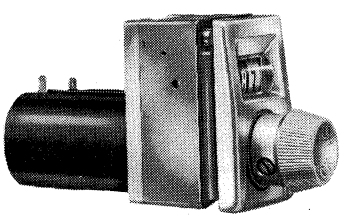
1330 Series, Digital

You get straight-on or angular readout with this illuminated turns-counting Microdial. One-piece lens/window magnifies numerals 1.5x. In exactly 10 turns, unit counts from 000 through 999. Fingertip brake locks settings in place.

This Microdial is sealed against dust yet its snap-on cap makes lamp replacement easy. Standard finishes for color coding: dark or light gray, red, white, and black; other colors and special read outs available on request.





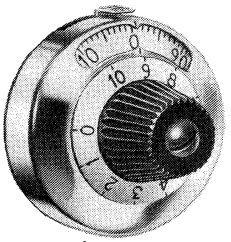
3100 Series, Digital

Remarkably accurate (1000:1 indexing accuracy) miniature 3100 Series dial almost makes a standard circular dial look gigantic by comparison. This Microdial measures only $1\frac{1}{8}$ x $1\frac{21}{32}$ inches and protrudes only $\frac{25}{32}$" from a panel.

Digits (with illumination optional) are magnified by a convex lens in recessed window. Three-digit, ten-turn dial rotates continuously clockwise or counter clockwise with push-pull fingertip brake to lock settings. This 3100 miniature Microdial will mount on panels from $\frac{1}{16}$" through $\frac{3}{16}$" thick.

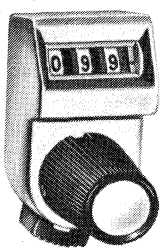
Standard color: natural brushed aluminum finish.

Amphenol's Dial-Pot assembly saves you time and money... eliminates costly mounting and phasing. If you now buy pots and dials separately, but for the same application, Amphenol can prephase and pre-assemble the 3100 dial to any potentiometer at no extra cost. You simply mount the assembly from rear of panel and wire into your circuit.



1320 Series, Concentric

The 1320 series is a $1\frac{3}{4}$ inch diameter 10 turn concentric scale dial with extra large numerals and a wide variety of color combinations including gloss and dull black, satin chrome, and bright chrome. Incorporating Amphenol's exclusive continuous inner dial movement, the 1320 is offered with or without brake. This dial is a rugged, long lasting, highly accurate unit which will meet your most demanding requirements.



DFD Series, Digital

- **250 PPM Reading Accuracy.**
- **High-Density Packaging — Up to 72 Per Sq. Foot!**

The DFD is a precision mechanism that provides a direct manual drive for a panel-mounted ten-turn potentiometer and an associated 3-digit readout that registers the drive-shaft rotation in turns, to three significant figures, a vernier wheel providing four graduations intermediate between adjacent digits on the least significant digit counter wheel permits interpolating to 250 parts per million, or less — fully compatible with the resolution and linearity of the average ten-turn precision potentiometer.

The entire assembly is less than one inch wide and less than two inches high, making it feasible to mount up to 72 controls per square foot of panel space, yet the digital display is comfortably readable at all times. It is not hidden by the operator's hand during adjustment and is equipped with a magnifying window that significantly enlarges the numerals and vernier scale for easy viewing from all positions.

Special Options

Amphenol, with the broadest and most versatile concentric scale and digital dial lines in the industry, offers you more than standard units. An example is the 1300 and 1330 series digitals which can be modified to give you such special features as index lines, internal illumination and special readouts. Contact your Amphenol area representative for full details on these and other optional features available to solve your design problems.

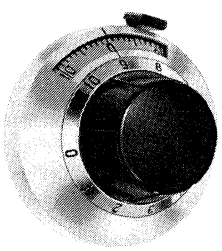
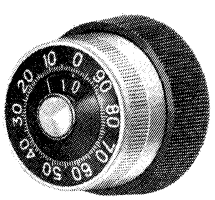
1370 Series, Concentric

Only ⅞" diameter (1" with finger brake), this 10-turn Microdial® projects 2$^{9}/_{32}$" from panel. Don't let the small size of this dial fool you. It has the same silent gear action of the conventional size Amphenol dials. It indicates angular position of potentiometers and multiturn devices of 10 turns and less with 1000:1 indexing accuracy. Inner dial counts turns, outer dial counts hundredths. Locks rigidly onto shaft to eliminate backlash. Epicyclical internal gearing assures readout accuracy. Finger-tip lever offers positive brake action without disturbing critical settings.



1350 Series, Concentric

The 1350, 1$^{13}/_{16}$" diameter, indicates angular position of potentiometers and multiturn devices of ten turns and less with 1000:1 indexing accuracy. Inner dial counts turns, outer dial counts off hundredths. Locks rigidly onto shaft to prevent backlash. Internal gearing is epicyclical type so you always know exact reading. Fingertip brake holds shaft position until reset.

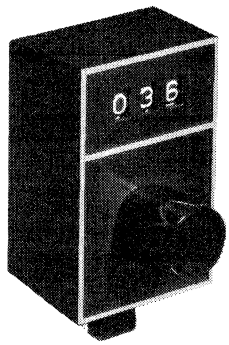


3000 Series, Concentric

Only 1-inch diameter (1$^{5}/_{32}$" with finger brake), this 10-turn Microdial projects 1$^{5}/_{16}$" from your panel. Without brake, array of these units can be mounted on 1¼" centers. And the digits are as large and as easy to read as some dials twice the size.

Clear plastic dial face is sealed and angled to prevent reflections. You can color-key dial functions by choosing from 5 standard brake knob colors and different combinations of numeral and background colors.

Don't let the small size of this Microdial fool you. It has the same silent gear action of the conventional size Amphenol Microdials.

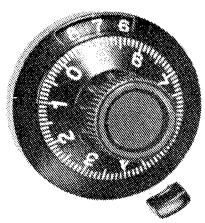


1380 Series

FEATURES . . .

- **Precision digital dial designed for precision potentiometers up to ten turns — yet exceptionally low cost.**
- **Zinc die cast housing and rear cover for demanding applications.**
- **Indexing accuracy is 1 part in 1,000.**
- **Modern styling and small size.**
- **Easy mounting . . . A single set screw mounts dial to potentiometer shaft.**

Amphenol's new 1380 Series miniature digital dial is available in a black finish model 1381 or a fine black-grey hammer finish model 1385. The 1380 accepts a ¼" shaft diameter and modification for a ⅛" shaft diameter is available as a special option. Fingertip brake assures maintenance of critical dial settings. And the 1380 offers you ultra-modern styling to compliment any panel layout.



DFA Series, Concentric

- **1 Part in 1000 Reading Accuracy.**
- **Up to 99 Dials Per Square Foot of Panel Space!**
- **Satin Chrome on Black Finish.**

The DFA is an excellent answer to the need for a precision setting and indicating device for use with multi-turn potentiometers, particularly in control-console and computer applications, where the multiplicity of control elements is a significant factor in the total investment, and panel space is often at a premium.

The dial control knob couples directly to the potentiometer shaft, hence there is no backlash in the control of the actual resistance setting. A single numeral in the window above the knob indicates the number of completed turns of the shaft, and the graduated dial integral with the knob indicates in tenths and hundredths the percent of partial turn of the shaft enabling an accuracy in setting of one part per 1000.

Two standard models are available in this control series: The Model DFA-N with satin chrome finish and Model DFA-NB with white numbers on black finish. They feature constant torque that allows easy adjustment, yet maintain settings under conditions of extreme vibration. Both models include a flip-lock lever that applies 25 inch-ounces of torque against accidental displacement, in the locked position, yet allows high-speed rotation and setting when unlocked. The units are only 1.06 inches wide, with a body height of 1.25 inches (1.63 inches including lock lever) enabling grouping of miniature ten-turn potentiometers in control banks of up to 99 elements per square foot of panel space.

CHICAGO MINIATURE LAMP WORKS

Subminiature Incandescent Lamps

SELECTING A MINIATURE OR SUBMINIATURE INCANDESCENT LAMP.

Your lamp and lighting requirements should receive careful consideration in order to take full advantage of the wide range of miniature and subminiature lamps available from Chicago Miniature. Most of the lamps listed are Industry Standard lamps. Non-standard lamps are identified by a CM7-, or a CM8-, preceding the part number. We recommend the use of Industry Standard lamps whenever possible. If a standard lamp cannot be found in the following listings contact your local Chicago Miniature representative or Chicago Miniature direct.

Chicago Miniature has over 4,000 lamps plus the capability of engineering and manufacturing to provide special lamps to meet your specific needs.

DEFINITIONS

MEAN SPHERICAL CANDLEPOWER (MSCP): A measure of total luminous light output traceable to the National Bureau of Standards.

LUMENS: A measure of light output traceable to the National Bureau of Standards and relatable to MSCP by factor of 4π
(Example: MSCP X 4π = Lumens).

LIFE (HOURS): The rated average life of a lamp in hours. Rated life is determined by testing a group of lamps on constant AC voltage under laboratory conditions at room temperature. DC aging vibration and high ambient temperature (220°F and over) can each affect actual service life.

T—1 & T—1-1/4 Helium Retardant Lamps

These lamps are intended for use in Helium filled aircraft instruments where optimum resistance to Helium permiation and associated lamp darkening is required. To specify a specific MSCP tolerance add AS (aged and selected) and ± 25% or ±15%, whichever is applicable. (Example: 6809AS15%).
(All Chicago Miniature T-1 and T-1¼ Helium Retardant Lamps are aged prior to current (±10%) and candlepower (MSCP).).
All Chicago Miniature T-1 1/4 Helium Retardant Lamps are inspected for current and light up.
Other selection tolerances are available on request.

SPOT CHARACTERISTICS

Spots produced by lens-end lamps vary in shape from elliptical to round. Lamps supplied with specific spot characteristics are defined in the following manner and noted above:

1. With the lamp .375" from tip to surface, the spot shape is defined within the limits shown. The filament positioned in the vertical plane and the solder spot (grooved base) should be within 25° from the vertical axis. The spot must completely cover the specified diameter circle.
2. Within the specified diameter circle a minimum of 750 foot candles must be maintained when operating at 2.5 volts and at a distance of .375".

THE REVOLUTIONARY METHOD FOR MARKING ELECTRONIC EQUIPMENT

JUST RUB and it's PRINTED!

Sharp • Clean • Fast • Not a Decal • No Water • No Tapes

INSTANT LETTERING® marking kits bring you all the necessary elements for completely marking electronic equipment, prototypes, drawings, etc. in this fast new easy-to-use form. There's even a new drafting symbol kit for better more readable schematics.

Words, letters, numerals, switch patterns, arcs, drafting symbols, etc. are printed on a special transparent carrier film. Rubbing over one of these elements with a ballpoint pen releases it from the carrier film and adheres it to your working surface.

INSTANT LETTERING® words and symbols transfer to almost any surface including glass, plastic, even painted and bare metals. Now you can quickly mark all panels, even especially calibrated two-color nomenclatures, pilot light jewels, sub-assemblies, circuit boards, etc. Reproduction quality **INSTANT LETTERING®** transfers are clean and sharp, leave no background haze or film, make prototypes look like finished production equipment and give all equipment and drawings a professional look.

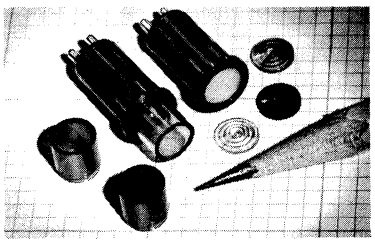
Indicator Lite selection trade-offs got you stymied?

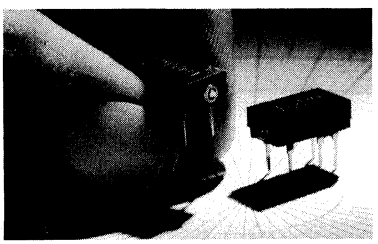
Turn to Eldema/Genisco for single-source solutions

Whatever your design requirements—miniaturization; economy; long-term reliability; mounting flexibility; solid-state, incandescent or neon light sources—You'll find the optimum answer in Genisco's extensive Eldema's indicator lite line.



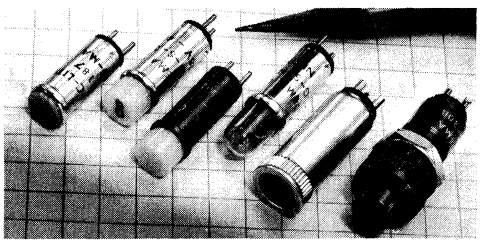
RIB-LOC® MINIATURE LITES. They're low-cost and convenient to install from the front of the panel. No mounting hardware needed. Their rugged polyamid molded "ribbed" housings fit firmly in 0.312" punched holes. Heat resistant polycarbonate lenses in standard colors are available. They use either long-life incandescent (T-1 3/4) or neon (NE-2H) lamps.

For details request Catalog BP-100.



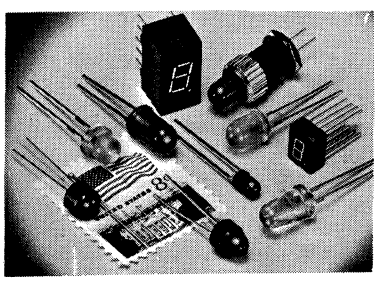
ID SOLID STATE STATUS INDICATOR. Compatible with IC logic levels, its MINI-DIP housing with 0.200" terminal spacing is designed for easy P.C. board mounting. Its LED lamp employs a unique lens to provide wide-angle viewing (160° or more). High brightness is achieved from only 5 VDC/10mA. The glass-filled phenolic molded case includes a built-in series resistor.

For details request Catalog ID-100.



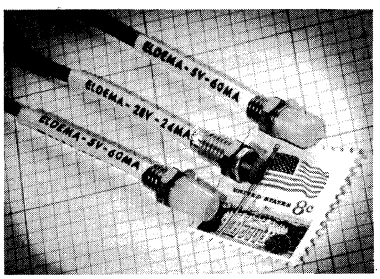
C-LITE CARTRIDGES/D-HOLDERS. Originated by Eldema, this concept has proven a reliable, space-saving and versatile solution for a host of applications. The 2-pin C-LITE cartridges are easily insertable, from the front of the panel, into single or multiple mating D-HOLDERS. They come in LED, incandescent or neon lamp versions. A complete range of plastic lens shapes and colors and standard lamp ratings from 3 to 28VDC are available as well as higher voltage and extended-life types. They meet MIL-L-3661 requirements.

For details request Catalog CD-100B.



LED LAMPS/NUMERIC DISPLAYS. Eldema's broad line of LED lamps/numeric displays cover most requirements. They come in a wide variety of packages. Their low power consumption is compatible with IC outputs. High intensity, ultra-long-term operation is assured by their all-solid-state construction. They provide optimum viewing angles. The 7-segment numeric displays come in .122" and .270", nom., character height versions. Eldema also offers a low-cost mounting kit that allows lamp insertion from the panel front.

For details request LED Data Sheets.



J-LITES—Subminiature, high-reliability types. Meets requirements of MIL-L-3661. Their long-term reliability, low power requirements, resistance to shock and vibration, combined with easy, trouble-free installation and small size make them ideal for most any critical miniaturized application. They come in flat, dome or Fresnel dome lens configurations. Insulated wire leads simplify circuit interconnection. Front panel mounting in 0.193" holes. Available in LED, incandescent or neon lamp versions.

For details request Catalogs J-200, JD-100.

100 and 500 series thermoplastic control knobs, designs patented

NOBEX offers the designer the most comprehensive selection of matching instrument quality control knobs in the industry. This wide variety of sizes and types, many not offered anywhere else, represents an expanding line of products for an ever changing electronic industry.

NOBEX firsts include the patented Color Coding Cap system for use with the 100 Series Knobs. NOBEX is still the only manufacturer to offer a Miniature Series of 7/16" through 5/8" base diameter knobs. Many items standard with NOBEX would be expensive "specials" with our competitors.

The control knobs shown below are available in the 100 Series (plain top) or in the 500 Series (with decorative aluminum cap) from factory and distributor inventories. The drawings and charts to the right of each knob contain the sizes and part numbers of the knobs available in each style. Control knobs are stocked with two (2) set screws and shaft diameters indicated in the charts.

alpha-numeric display bezels

DIGIBEZEL®

The first and only low cost, easy to assemble standard bezel for alpha-numeric displays. DIGIBEZEL will enhance the front panel lines of instruments and systems incorporating digital displays while providing maximum contrast in high ambient light conditions. DIGIBEZEL is a three piece assembly consisting of a front panel bezel, retaining frame and a circular polarized filter in one of four colors. Rear mounted spring clips eliminate visible mounting hardware. Seven standard sizes accommodate the most commonly used display devices in the industry, including the latest L.E.D. displays.

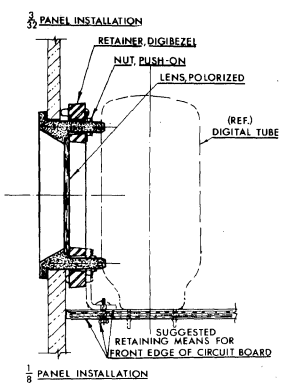
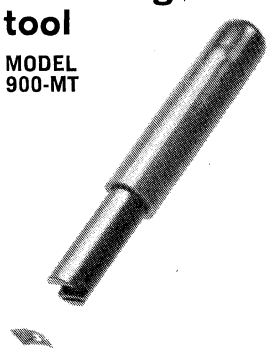
installation



DIGIBEZEL is easily installed to the panel of the instrument by placing the back side (with bosses) through the rectangular hole cut into the front panel with "top" and "bottom" markings appropriately located. After the front bezel has been placed in the location the polarized filter is then inserted from the back into the recess provided. The DIGIBEZEL retainer is then placed onto the rear bosses using the correct side for appropriate panel thickness (Side 1 for 3/32", Side 2 for 1/8" thick panel) to secure the filter and bezel to the front panel. All three parts of the assembly are held together and in place by rear mounting spring clips.

mounting tool

MODEL 900-MT



An optional mounting tool is available from NOBEX for added convenience with DIGIBEZEL installation. The mounting tool is specifically designed to be used with the spring clip hardware supplied with each DIGIBEZEL assembly. The tool is manufactured of aluminum with an easy grip handle.

Logic units provide constant current drive for the LEDS; they are designed for easy system interface.

The externally-driven displays, encapsulated in clear plastic, are compatible with most TTL and DTL decoder circuits, and have low power requirements.

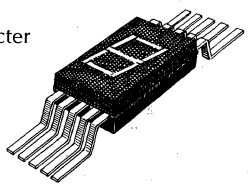
Displays

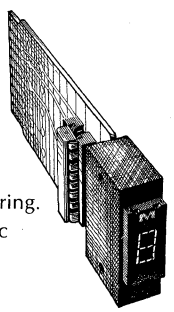
We pioneered the 7-segment display field with the MAN1. We also have the MAN7 and MAN10A—lower cost, brighter than ever.

For smaller character requirements we have the MAN3A, .115" character height, red epoxy lens.

We also have displays with character heights of .127", .190", and .350" and in different package configurations.



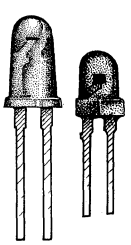
Display Module



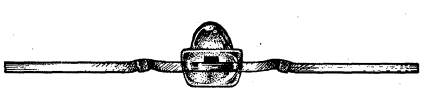
Monsanto display modules, with complete driving circuitry built in, save design time and money. This option provides a clean "building block" approach with minimum engineering.

Available for 7-segment or alpha-numeric displays, in many sizes.

Visible and IR Discretes



The MV5020 series GaAsLITEs feature many lens design configurations and solid state reliability. All come with a snap-in clip for easy panel mounting. Also available—illuminators, diagnostic lamps, red, yellow, and green colors.



The MV50 gives you an extremely bright source in a small package. It can be mounted on 100-mil centers and features long-life and low cost.

We have many more visible GaAsLITES available, as well as a full line of infrared light emitting diodes. They all have Monsanto's experience and dependability behind them.

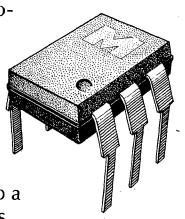
GaAsLITE Update

LITE Heavyweights

Monsanto has produced more GaAsLITE products than all other manufacturers combined. We're pretty proud of that: it means experience, production capability, reliable products. Take a look at some of the LITE Heavyweights available at distributors near you.

Opto-Isolators

Monsanto has a full line of opto-isolators that couple light emitting diodes to photo-transistors, photo-diodes, photo SCR's, and photo-darlingtons. The new MCA2 Photo-darlington coupled pair can be used to replace reed and mercury wetted relays and pulse transformers.



Our MCT2 couples a GaAsLITE emitter to a photo-transistor for use in many business machines, computers, and control applications.

There are many more products in our coupled pair line. Complete information is available in our new catalog.

Arrays

Our custom array product group is available to you for all types of specific array applications. We offer 3½ and 4 digit arrays and multi-diode linear arrays. If you have a requirement, we invite your inquiry.

LITE Heavyweights — on the shelf at our distributors — in quantity. Call today to order or to discuss product applications.

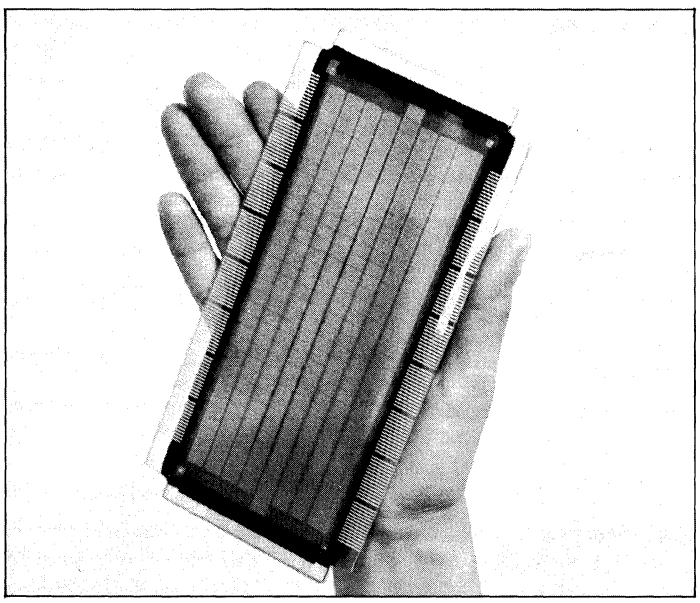
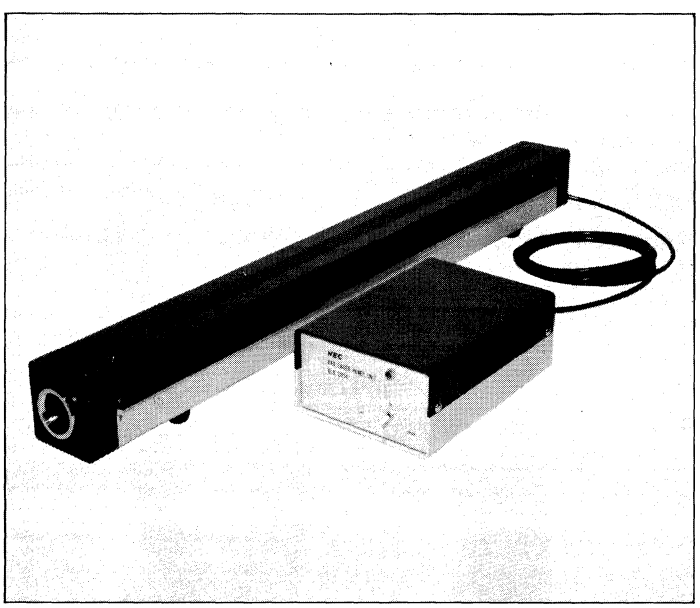
New Directions in Gas Laser and Plasma Display Panel-By NEC



New Type "UTOVUE" Dotmatrix type Plasma Display Panel

Capable of reproducing any letter in the alphabet or any number. The display panel is equipped with a transparent electrode to ensure unusual brightness. It is a decided improvement over conventional types. Featuring a refresh-type operation, this versatile panel can be applied for all kinds of terminal equipment such as computer, data transmission electronic calculators and instrumentation and industrial machines. Sample will be available this fall.



15 mW He-Ne Gas Laser GLG 2040

NEC's new 15 mW He-Ne Gas Laser offers two distinct improvements from conventional ones—greater stability and extra-long operating and shelf life, with no heat run necessary during storage. Output power, for example, is remarkably stable within ±2%/hour after a 30-minute warm-up. Cavity spacers are made of ultra-low-expansion "Neoceram" glass rods. Moreover, the brewster windows are sealed with glass rather than adhesives. That's why NEC guarantees it for the first full year following delivery.

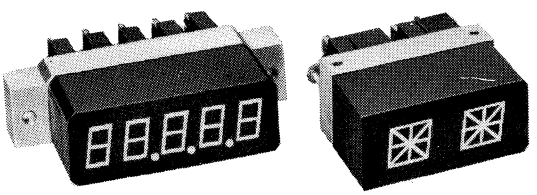
This Tung-Sol development, which created a whole new set of digital display standards, is now made in a narrower configuration that reduces the space required for array applications. Low voltage, low power drain (25 V and 1.6 V) is ideal for low signal level requirements, especially battery-operated equipment. Digivac S/G displays meet MIL specs. They employ standard miniature tube bases and have inexpensive logic/driver requirements. Display is single plane with space-age-type segmented characters. Solderable-lead option provides for circuit board mounting. Common filters provide unlimited color selection for identification, or to heighten contrast. Illustrated types are standard. Other symbols on special order.

INCANDESCENT TYPES

7 Segments, 16 Segments, Stacked, Integrated, Status Indicators



Designed to provide optimum contrast under ambient light conditions. Light shades are not needed. Tung-Sol displays function in extreme environmental conditions. The 20 mA and 70 mA lamp banks are mechanically interchangeable.

7 Segments—Display 0 through 9.

16 Segments—Full alphanumeric display.

Integrated—Monolithic construction requires less width per character. Individually replaceable lamp blocks, or individually replaceable lamps.

Status Indicators—Fixed messages, or symbols, to specification. Supplied readable when off, or completely blank.

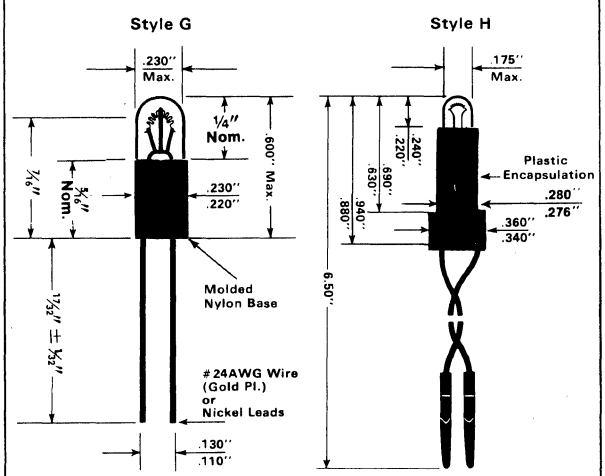
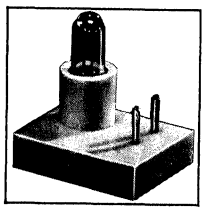
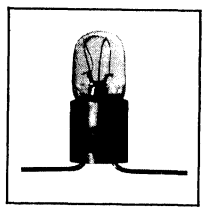
These lamps may be mounted on a variety of simplified terminals. AMP Inc., Harrisburg, Pa., makes several types.





Plug-in module activates photo-electric sensor in high speed check sorter.



Molded base permits bending lead wires at acute angles.

The molded base lamp provides important advantages that simplify production and contribute added reliability to the end product. The molded base is permanently bonded to the bulb. It replaces the previously cemented-on metal base. The former receptacle that had to be wired into the circuit is completely eliminated. The molded base lamp is self-mounting. In fact, the Tu-Pin lamp can be applied with automated equipment.

The molded base technique makes it possible to provide a wide variety of lamp packages—built-in key ways, plug-in types, unusual positioning of the leads and multi-purpose configurations.

Strip-mounted, grain-size, 21-mil lamps snap into molded plastic holder to form a condition monitor for computer circuit boards. Lamp sockets are numbered to correspond to individual circuits. Space for test probe contacts is provided. Units can be operated in either normally "on" or "off" condition and can be wired to a door switch or test push button.

CUSTOM-BUILT BANDPASS L-C FILTERS

PROTOTYPES OFTEN DELIVERED IN LESS THAN 3 DAYS

Types: Butterworth, Tchebycheff, and Elliptic Function.

Frequency Range: 400 Hz to 30 MHz.

Impedance Range: 50 ohms to 10K ohms.

Construction: Epoxy encapsulated or sealed in metal can.

The bandpass filters listed below are typical units that we build. We do manufacture filters with cut-off frequencies in-between those listed. We also deliver bandpass designs with better shape factors than those listed below.

INSERTION LOSS

The column marked **db** in the table of basic part numbers is the insertion loss at a frequency of 150 kilohertz. Insertion loss is a measure of the effectiveness of a filter at a particular frequency. The insertion loss is the logarithmically adjusted ratio of signal input to signal output measured in a standard circuit of 50 ohms input and output impedance. The larger the number of **db** the greater is the signal reducing ability of the filter.

All the **db** figures in the chart represent the insertion loss for each filter at 150 kilohertz. A complete description of insertion loss requires a graph or a tabular chart showing a number of **db** readings at frequencies spread throughout the useful range of the filter. The filters in this catalog have a useful range from below 150 kilohertz to above 250 megahertz. They have been designed to maintain approximately the stated level of insertion loss in the frequency range of 150 kilohertz to about 10 megahertz and then to follow a gently sloping reduction maintaining effective levels of insertion loss to between 250 and 400 megahertz. This corresponds to the normal frequency distribution of radio interference generated by most electrical machinery, electromechanical devices and a great deal of electronic equipment.

The tubular filters are designed for more severe requirements and will maintain the stated level of insertion loss from 150 kilohertz to greater than 10,000 megahertz.

CURRENT & VOLTAGE RATINGS

Filters are rated for continuous use at a maximum ambient temperature of 85°C (185°F). They are made to withstand occasional momentary surges for normal motor starting, etc. If you have an intermitten duty problem contact factory for a suitable rating.

The filters are rated for continuous use at the specified voltage at temperatures up to 85°C (185°F). Filters with a dual voltage rating (e.g. 400 VDC/150 VAC) are rated for the higher voltage only in direct current applications. The rating drops to the lower value for alternating current applications. Any filter may be used at a lower voltage than its rating.

All filters are designed to have a voltage drop of low value so that they will not interfere with proper operation of the equipment in which they are installed. The 70 volts D.C. series has a maximum drop of 0.3 volt when operated at full rated current. The 400 VDC/150 VAC and the 600 VDC/250 VAC have a drop of less than one percent of the AC rating when carrying full rated current.

ALL-TRONICS RFI/EMI TESTING LABORATORY

In addition to manufacturing the Standardized Filters shown on these pages and the additional lines described below, ALL-TRONICS also maintains a complete laboratory facility especially for RFI-EMI testing. Large modern RFI shielded rooms, the latest interference and field intensity meters and top level know-how provides a testing service that covers all the latest requirements and compliance with FCC regulations and/or military specifications including MIL-STD-220A, MIL-STD-461A, MIL-I-6181D, MIL-STD-826A and MIL-I-16910C. In addition to RFI/EMI interference levels caused by your equipment ALL-TRONICS can also perform susceptibility tests to determine the effects of RFI/EMI emissions on your product. Test plans per MIL-STD-831 and consultation on test methods for your products are also available.

BULOVA LC FILTERS/MAGNETIC COMPONENTS

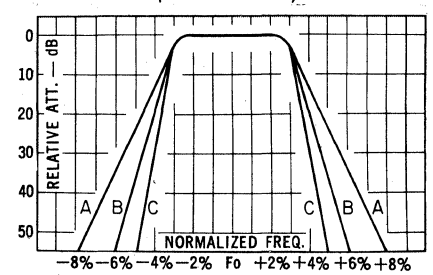
Computer Designed for Maximum Performance—To Your Spec—DC to 80MHz

Pioneers in Time/frequency product design, Bulova has developed a diversified L C Filter product line that features ● Computer programmed performance characteristics ● Competitive pricing ● Custom product sophistication ● High-use, long-life reliability

A continuing effort in L C filter design for the selection and shaping of frequencies has culminated in the development of a unique series of filters, particularly engineered for spectrum analysers.

Filters With Excellent Shape Factor

High frequency filters with 45db/3db shape factors between 1.5/1 and 2.3/1. They are designed to operate between 100 ohm impedances and exhibit excellent temperature stability.



Comb Filters

Useful for such applications as spectrum analysis and available as standard items in contiguous banks from 10 Hz to 10 MHz.

IRIG BANDPASS FILTERS—Available from 400 Hz to 165 kHz with attenuation at ±7.5% of center frequency within 3 db in 21 channels. Eight other standard channels are available in frequency from 22 kHz to 165 kHz at ±15% 3 db points.

IRIG LOW PASS FILTERS—Low Pass and Linear Phase Low Pass filters are available in IRIG frequencies. The low pass are intended to attenuate the 2nd and higher harmonics of the incoming signal. Bulova's linear phase low pass filters attenuate the higher harmonics and provide minimum phase distortion and therefore low transient response. These filters are for 10k ohms terminating impedances.

TONE CHANNEL FILTERS—Designed for data transmission systems, Bulova offers a wide selection of special (and standard) tone filters (band pass and low pass) featuring high stability, small package size, a wide variety of center frequencies and shape factors, phase linearity, etc. Range: 10 Hz to 10 kHz; Stability: better than .1%; Bandwidth: as narrow as 1% can be supplied.

TUNABLE, MULTI-FREQUENCY TONE TRANSFORMERS—Tone Transformers are ideal components for communication equipment, using tones to accomplish signaling functions. To cover a wide range of applications, these transformers are available with 4 to 10 terminals, suitable for printed circuit mounting.

BAND REJECT FILTERS—Some of the outstanding features of Bulova LC Band Reject Filters are their high discrimination and stability. This type of filter is available in a wide range of frequencies and shape factors . . . Bulova also specializes in LC and RC Notch Filters.

LUMPED CONSTANT DELAY LINES—Bulova custom designs Delay Lines to cover any practical impedance range. Keeping physical dimensions at a minimum, these networks feature low signal attenuation, excellent thermal stability, low pulse distortion and extended band width, achieving high delay-to-rise-time ratio.

EQUALIZERS—Maintaining narrow tolerances, a wide selection of custom designed Amplitude and Phase (Delay) Equalizers have been developed to be used with transmission lines, amplifier networks etc. Bulova's engineering staff is always available to consult with you on design problems. Additional information on all networks is available upon request.

90-150 HZ DUAL BAND PASS FILTERS FOR AVIONIC SYSTEMS—Designated Series 3300, the units are designed for application in Instrument Landing Systems. The primary features of the Bulova Band Pass Filters include high frequency stability over temperature (−10°C to +50°C) and exceptionally accurate output tracking (within .1 db over temperature range).

RFI Powerline Filters

B Series These powerline filters effectively provide RFI control of both line to ground and equipment generated noise in a small size at low cost. All are recognized by UL. **K Series** These powerline filters are similar to the B Series. They have the added feature of being extremely effective in the control of line to line as well as line to ground RFI interference. They are particularly suited to applications where pulsed, continuous and/or intermittent RFI interference is present. All are recognized by UL. **EF International Series** These filters incorporate the special IEC (International Electrotechnical Commission) connector which complies with all requirements for equipment where a detachable powerline is part of the equipment design. Pin configuration in the connector conforms to proposed European specification of 4 mm. minimum. All electrical specifications are in accordance with IEC, BSI, CSA, VDE and American Standards Association specifications. **R Series** These dual T section RFI powerline filters provide premium performance at moderate cost and are well suited for low impedance loads. At frequencies as low as 150 KHz, the R Series has an insertion loss as high as 45 DB. They control pulsed, continuous and/or intermittent interference, insuring protection of equipment from powerline noise in addition to protecting the line from equipment noise. The dual T type provides extremely low leakage yet without deterioration of insertion loss characteristics. All B, K, EF and R Series Filters are recognized by UL.

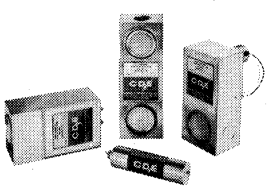
COMMUNICATION & SIGNAL LINE FILTERS



Cornell-Dubilier Communication and Signal Line Filters are designed for use in telephone, teletype, and digital communication networks for the purpose of making possible secure communication installations in accordance with the security requirements of DCA RED/BLACK ENGINEERING — INSTALLATION CRITERIA (U) per DCA CIR C175-6A.

Through the application of the SDS 940 computer system in conjunction with unique network synthesis and analysis capabilities Cornell-Dubilier Electronics is able to offer a product line consistent with minimum cost and optimum size and electrical characteristics.

Due to the vast number of different applications, each having unique physical and electrical requirements, only a few of the many types of security communication filters have been shown.

Notes:

1. The CDFS Series is a high reliability filter designed to meet the applicable portions of MIL-F-17533/MIL-F-18327 for metal encased, hermetically sealed units.
2. Exterior finish is fused electro-tin-plate.
3. Operating temperature range is rated at —55°C to 85°C.
4. Case temperature rise is less than 20°C.
5. Insulation resistance is in excess of the requirements of paragraph 3.11 of MIL-F-15733E.
6. Dielectric withstanding voltage may be tested in accordance with paragraph 4.6.5 of MIL-F-15733E.

INSERTION LOSS	Curves 1 through 9 published in the EDPF Catalogue are plotted per MIL STD 220 A impedance settings and plotted in a "Real World" impedance setting.			

The CDE publication, *EMC Compatibility Solution,* details the electrical and mechanical parameters of the entire series. In general, the needs of the EDP industry seemed best served by five standard circuit configurations; four basic combinations of circuits, in four standard packages:

Circuit configurations:

"L" circuit
"π" (pi) circuit — BAL. L (European)
"T" circuit — BAL. T (European)
2 L circuits — BAL. 2L (European)
2 T circuits

Circuit combinations:

single circuit
2 circuits—normally used for single phase applications
Three circuits—used for both single phase and three phase applications
Four circuits—used for three phase plus neutral coil applications

Mechanical configuration:

single circuit—tubular
two, three and four circuit units:
open terminal
or bulkhead mount
or enclosed terminal

The tubular and bulkhead mounted mechanical configurations can be supplied with either a capacitor or an inductor input, as defined by the user. The open terminal and enclosed terminal configurations can be oriented with respect to input, as needed.

Insertion loss has been diagrammed two ways—within a Mil-Standard 220A (under load) condition and within a typical impedance setting for primary circuits. The assumptions for the latter were, a source impedance of .001 ohms, and load impedance determined by the voltage and current rating of the filter. Note that the EDPF series is rated 250 VAC. (Example: a 50 amp circuit yields a 5 ohm load; 250 VAC/50 amps = 5 ohms.) The "real world" condition further takes into account saturation within the inductors due to current flow.

It has been typical to specify filter **voltage drop** assuming the load to be purely resistive—which is rarely encountered. Therefore, the EDPF series is designed with voltage drop not exceeding 1 per cent of rated voltage—at full rated current—and having a lagging power of .8 to 1.0.

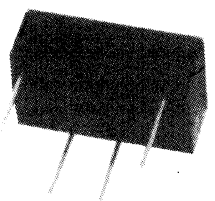
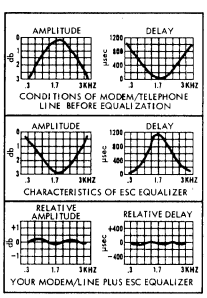
ESC Dual-In-Line Filters

Five series of filters, three low pass and two high pass filters are listed in this catalog available upon request. A bandpass filter can be formed by tandem connection of a lowpass and highpass (minimum bandwidth is one octave). Full specification for attenuation and typical characteristics such as phase shift, group delay and pulse response are presented in catalog. Frequency range covers 1 Khz to 10 Mhz and Impedance from 50Ω to 5000Ω. Epoxy cast in DAP cases, size is only .46 x .76 x .25.

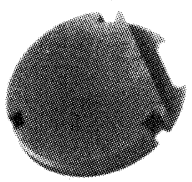




ESC Compromise Equalizers for Telephone Line Modem Designers

ESC produces custom designed compromise equalizers for modem manufacturers to correct for transmission line and modem produced amplitude and phase (delay) distortion. Equalization allows modem sets to be used at highest possible rates with minimum distortion. Contact ESC for your specific requirement.

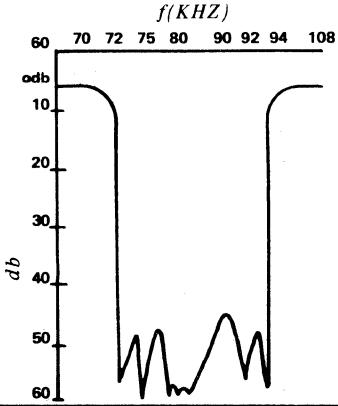
Sonar Filters in Phase and Amplitude Matched Sets

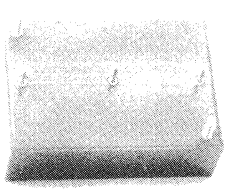


Linear phase bandpass and lowpass filters, with phase and amplitude matched passbands. Matching can be accomplished for any number of channels; generally three filters made a set, but as many as 900 have been phase and amplitude matched. ESC produces filters for Sonobuoys and audio comb analyzers.

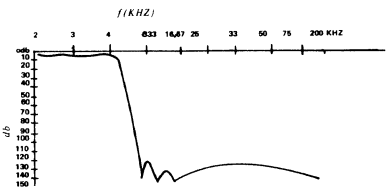
High Speed Data Modem Filters in 60 Khz 108 Khz Range

ESC produces a series of lowpass, bandpass and band suppression filters for use in high speed (150 Kbps) data modems. Filters have very sharp attenuation characteristics and are made in compact size for PC board capability.





Toll Free 800-631-0853 except N.J.

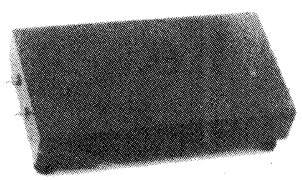


140 db Aircraft Radio Low Pass Filter

Provide 140 db attenuation of harmonic frequencies in audio band. Filters have controlled minimum phase shift, are miniature in size and fabricated in mu-metal cases for minimum external magnetic pickup. Size is only 1.2 x 1.0 x .58.

ESC Telephone Line Simulators

ESC Simulators are passive, stable LC Networks. They provide voice-band data system users with nominal worst case conditions of amplitude and envelope delay of Bell Telephone voice bandwidth data channel 3002 and C1, C2 and C4 conditioning. ESC will also design simulators to satisfy other custom requirements. Write for ESC Brochure on Telephone Line Simulators.

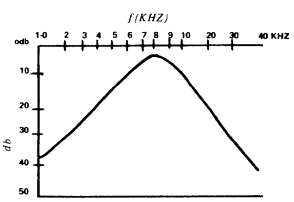


70 MHz Bandpass Filters for Modem and Microwave Links

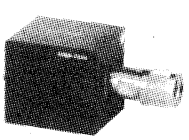
ESC produces 70 Mhz bandpass filters with 3db bandwidth in the range of 5% to 70% of 70 Mhz center frequency. Filters have a minimum group delay error and sharp attenuation response, typically with a ratio of 40db/3db bandwidth of 3:1.

High Reliability Miniature Filter to NASA Requirements

Filter is intended for use in equipment where extreme environmental conditions are encountered. Components in filter meet high-rel NASA requirement NPC 200-3.



Broad Band Video Transformers



Series of extended wide band transformers covering frequency ranges up to 8 MHz. Applications include impedance matching, interstage coupling, phase inversion, and elimination of ground loop problems encountered in video transmission. See photo and write for more details

The filters described above represent only a small segment of our total design capability. ESC also designs and manufacturers, typically. . .

Video	Fixed programmable and mechanically-variable delay lines for the TV broadcast industry, including video cable simulators and voltage variable delay lines.
Hi-Rel	Proven design, manufacturing capabilities, and facilities encompassing all quality levels dictated by MIL-I-45208 and MIL-Q-9858A.

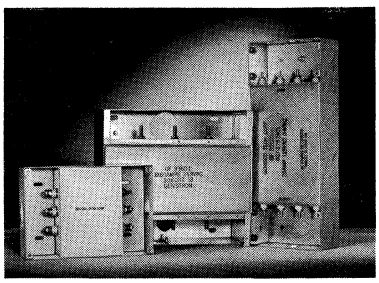
Noise pollution problems got you perplexed?

Get with Genisco's filter knowhow for the right answer.

Almost 20 years of technological leadership in design, fabrication and testing takes the guesswork out of getting "best-fit" filters at economically feasible costs.

COMPUTER-PERIPHERAL RFI/EMI FILTERS



These heavy duty units have been awarded both UL and VDE* recognition. They encompass a wide range of ratings: 10-to-100A/115-to-480VAC from DC to 400Hz. Their unique circuitry has been specifically developed to interface with stringent "clocking frequency" requirements. They feature a dielectric strength of approximately 10 times the rated line-to-ground voltage; a voltage drop of less than 1% of the line-to-ground voltage at power frequency; continuous duty operation to +85°C; low leakage—5.0mA, max.; insertion loss vs. frequency range of 1-to-100MHz. They come in single or multi-circuit configurations.

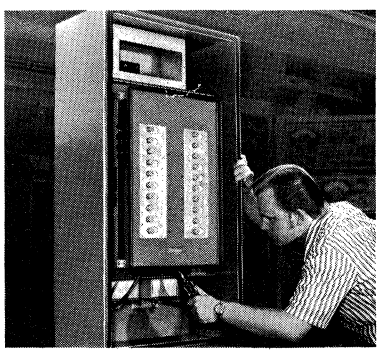
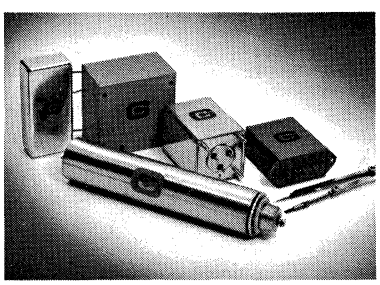
HEAVY DUTY POWER-LINE FILTERS



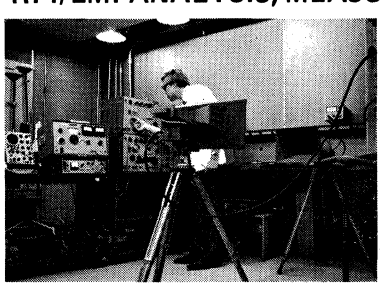
Tailored to specific requirements, using computer-aided design and advanced inductor and capacitor technologies, Genisco Power-Line Filter Assemblies provide optimum long-term dependable performance under stringent "real world" conditions. They're designed, built and tested to meet or exceed DCA/NEMA enclosure and MIL-F-15733 filter requirements as well as other applicable equipment specs. They are available with current ratings to 1,000 Amps and voltage ratings to 480V RMS (0 to 400Hz). They can be provided with circuit breakers and/or electronic surge arrestors in single and multi-filter shielded enclosure configurations. These assemblies provide over 100 dB isolation from 14 KHz through 1,000 MHz, and operate over a temperature range of -55 to +65°C.

HIGH-EFFICIENCY SIGNAL LINE FILTERS



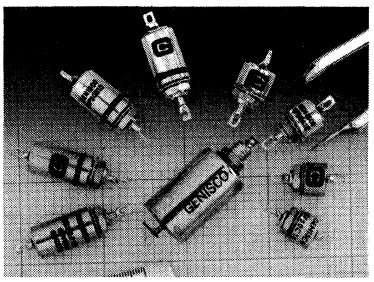
Packaged in a broad assortment of MIL-spec hermetic cases, they serve in such varied land line communication applications as telephone, teletype, carrier current, data-phone and computer link filtering systems. Their transmission loss, in the pass-band, is 1 dB or less. They also feature isolation of over 100 dB at frequencies ranging from 14KHz to 1.0GHz. Although designed for balanced transmission line systems, they still operate efficiently with mis-matches of as much as 2 to 1. Single or dual-line versions are available. These units meet applicable requirements of MIL-F-18327 and MIL-F-15733.

RFI/EMI ANALYSIS, MEASUREMENT, ENGINEERING SERVICES



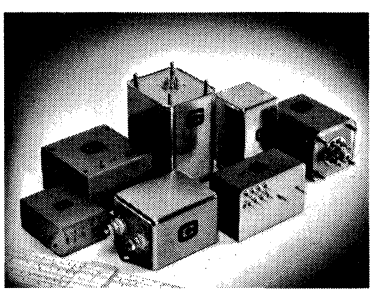
Genistron's long-term leadership in RF and EM interference technology, coupled with the most extensive independent test and evaluation facilities of their kind in the U.S., results in faster, more accurate and economical solutions to your noise interference compatibility problems. The all-inclusive service is conduced by experts in the RFI/EMI field using the latest in precision instrumentation as well as measurement and computer analysis techniques. Tests are conducted in a specially designed 4-room "screen room" suite. Contact us for a sample procedure and cost evaluation quotation.

RFI/EMI MINI-FILTERS



Make the most of your miniaturized filtering designs' performance with Genisco MINI-FILTERS. You'll not only save on space and costs, but also worries about long-term reliability. They're available from stock to assure fast deliveries. They come in a wide range of current handling values—from 10mA-to-10 Amps; and four voltage ratings—50, 100 or 200VDC and +28VAC (up to 400Hz). You can choose from 4 standard circuits—the "L", that's low in cost yet has excellent rejection capabilities; the "2L", which has the sharpest cut-offs and more low-frequency attenuation; "π" capacitive and "T" resistive input types, and their hermetically sealed cases meet MIL-F-15733. They operate from -55 up to +125°C.

WAVE FILTERS



All of Genisco's expertise has been employed to provide a broad spectrum of precision wave filtering units that are relatively inexpensive. They include a wide range of both high and low pass, as well as band-reject and band-pass types; single side-band; RF, AF and IF; equalizing and harmonic types; linear-phase units; telemetering, telegraph tone, and band-elimination types. These wave filters meet or exceed the requirements of MIL-F-18327 and the quality standards of MIL-Q-9858 as well as NASA's NPC 200-3. Their hermetically sealed cases conform to MIL-F-18327. Many of the types have Federal Stock Number assignments.

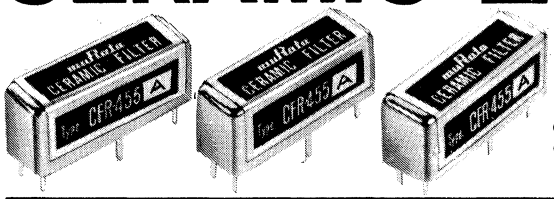
CERAMIC LADDER FILTERS



Murata ceramic ladder filters provide their outstanding performance and selectivity through the use of a piezoelectric effect on leadziroconate — titanate ceramics. Each filter consists of multiple ceramic elements coupled electrically in a ladder network. The various filters listed below differ only in selectivity characteristics and size, both of which depend upon the number of ceramic elements utilized in each type. Complete technical data is available from Murata Corporation of America.

INTERSTAGE AND LINE FILTERS

Available in stock frequencies listed below (numerical part of type — number is cutoff frequency in Hz). Compact shielded cases hermetically sealed to MIL-F-18327C specs. BMI, LMI, BML Cases: 1 3/16″ x 1 1/16″ x 1 5/8″ h.; wt., 6 oz. HMI, HML, LML Cases: 1 3/16″ x 1 1/16″ x 2½″ h.; wt., 9 oz. The BMI filters are band pass interstage units designed to operate between a vacuum tube plate (or 10,000 ohms) and a grid. They provide a gain of 2 at center frequency. BTI units are same as BMI, but 10,000 ohms output. BML band pass filters, similarly, work into a grid, but have an input impedance of 500/600 ohms. They provide a gain of 9.

HMI filters are high pass interstage units.

LMI filters are low pass interstage units.

HML filters are high pass with input and output impedance of 500/600 ohms.

LML filters are low pass filters with input and output impedance of 500/600 ohms.

LLP low frequency low pass filter, loss of less than 40 db at 20 Hz. Source and load 100K ohms.

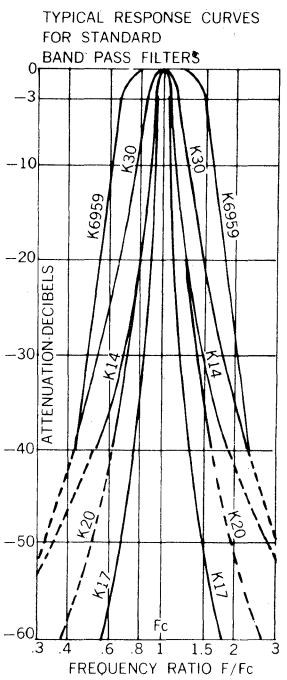
The bandwidth for any of the above filters can be increased or decreased to specification.



WIDE BAND FILTERS: Bandwidths of ±16% or greater can be obtained by ordering TTE standard High pass and Low pass filter sections as a composite network. Select numbers from the Series H and J listings on the next page which give the desired attenuation slopes and combine these numbers. For example to obtain a slope of 40db at 0.65 of the lower freq. cut-off, F_{c1}, (High pass section) and 40db at 1.6 of the upper freq. cut-off, F_{c2}, (Low pass section) use H69B and J59B. Specify the two as K6959. **The high pass series number is first, followed by the low pass number.** Types with dissymmetrical attenuation slopes can be combined. Also specify the three db down cut-off frequencies F_{c1} and F_{c2} and impedance. The price is the sum of the HP and LP section prices.

Telemetering: Refer to series K20, K21A, K30 or K31A. TO ORDER specify IRIG Channel number, source and load impedances.

TO ORDER BANDPASS FILTERS — Specify (1) TTE Series No., (2) minus 3db frequencies, (3) source impedance, (4) load impedance.

INSERTION LOSSES for bandpass types between equal terminations are from 0.5 to 6db depending upon bandwidth, frequency and size. K10 and K11 types have about 10 db, and K12 types about 5db flat loss. **SPECIALS** are available for center frequencies from 10Hz upward and 40db to 3db bandwidth ratios as sharp as 1.2:1. **TO ORDER** Specials, also specify (5) bandwidth and (6) stop band attenuation required.

Twin-T prices and cases apply to all filters using capacitor values from 0.1 MFD to 500 pF. $C = 1/8.85\ F_{Hz}\ (R_{source}\ R_{load})^{1/2}$. C is in farads. Filters with null frequencies as low as 1 Hz are available. Terminations are regarded as resistive unless otherwise specified.

Ceramic Communications Filters

Miniature, lightweight and rugged / Steep-sided selectivity / Large range of bandwidths / *Fixed-tuned* / Immune to magnetic fields / High stopband rejection and clean response / Highly stable with temperature and time.

These are prime characteristics of *ceramic* filters—first introduced by this company in 1958—which distinguished them from tuned-LC, mechanical and other varieties. They are also major reasons why Vernitron ceramic filters have been widely adopted for the best in land-mobile, airborne, marine, computer and data-communications systems, whether military, commercial or home-entertainment.

Vernitron engineers are specialists in filter design, with the latest in computer-aided facilities. Your inquiry will receive immediate response.

In addition, this network provides a voltage divider (R_1 and R_2) to supply the 150 mV Threshold level required for the 3208A. The Beckman Series 899-40 uses standard 5V TTL power for the threshold setting network.

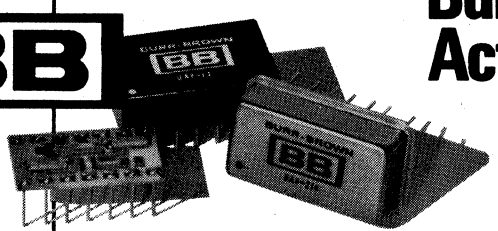
BB Burr-Brown Active Filters



ATF 76 SERIES
This series of active filters is available with low pass, band pass, and band reject characteristics. These are complete factory-tuned units requiring no external components. They operate from ±15 volt dc power over a temperature range of −25°C to +85°C.

LOW PASS
Sixteen low pass active filter models are available in the ATF76 series. These are available with Butterworth (flat amplitude), Bessel (linear phase) or two choices of Chebyschev (sharp cutoff) responses with 2, 4, 6, or 8 poles. The cutoff frequency is user specified with standard values in the range of 0.001 Hz to 20kHz. Price (10-24) $25.50 to $116.00 depending on characteristics.

BAND REJECT (Notch)
The ATF76 series includes three standard notch filters with Q's of 2, 5, and 10 over the frequency range of 1 Hz to 20 kHz. At the users option the center frequency can be externally adjusted. Price (10-24) $36.00 to $40.00 depending on frequency.

BAND PASS
Ten standard "Q" selectivity band pass active filter models are available with single-tuned or stagger-tuned responses. Band pass filters are available with center frequencies (fc) from 1 Hz to 20 kHz and Q's from 1 to 50. Price range (10-24) $33.00 to $51.00.

UAF 10 and UAF 20—HYBRID UNIVERSAL FILTERS
These filters employ a multiloop negative feedback circuit which allows easy synthesis by the user of low pass, band pass, band reject, and high pass filters. The data sheet provides extensive applications information and tables of pole locations for standard filter responses (Bessel, Butterworth, and Chebyschev). All UAF's are available in either a 14 pin epoxy or a metal hermetic package with dual-in-line pin spacing.
UAF10 Standard Frequency
Range: DC to 20 kHz
Price (100-249) $16.00
UAF20 Wideband
Range: DC to 200 kHz
Price (100-249) $32.00

HIGH VOLTAGE RESISTORS*

These modules were especially designed for color television to perform the following useful functions:

- Provide a load on the CRT high voltage supply to improve high voltage regulation and thereby aid peak voltage limiting to help TV manufacturers meet the government's X-ray radiation limitations.
- Provide a focus voltage for the CRT from a tap between the two resistors in the module.
- Discharge the high voltage supply when the TV is turned off.

Other applications include: CRT terminals, x-ray equipment, electrostatic copy machines, and many applications requiring high voltage resistors.

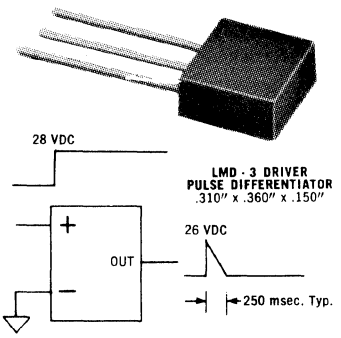
Microelectronic pulsers, drivers & regulator circuits

Control time intervals, convert a low level input control signal into a high level output signal, or convert positive step voltages into differentiated positive output pulses.

Ledex standard microelectronic pulser and driver circuits give you the interface to drive solenoids, stepping switches, stepping motors and other electromechanical products.

Ask for Catalog E-4600.

LMD-3 DRIVER PULSE DIFFERENTIATOR



Hybrid microcircuit converts a positive step voltage into a differentiated positive output pulse. Useful as a driver for stepping switches and latching relays to reduce the average power or hold-in current when driving units with pulses of long duration. Upon application of an input pulse or voltage, a differentiated output pulse is produced which returns to zero, maintaining negligible standby power for continuous application of input voltage. Negative differentiation is inhibited on removal of applied voltage.

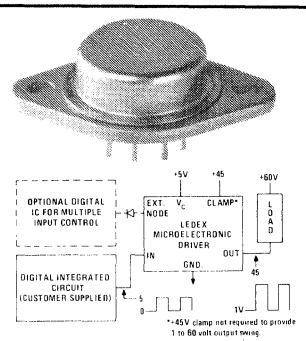
LMD-5 POWER DRIVER
Switches 325 Watts



Hybrid power driver, up to 7 amperes, converts low level input signals into levels high enough to drive heavier loads, such as solenoids and motors. Includes conventional DTL input with non-inverting sinking output stage, expander node terminal for logic input control from other sources of system, and negative-going-transient protection in output circuit.

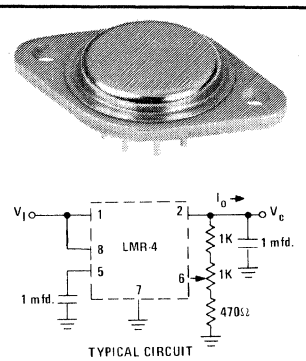
LMR-4 VOLTAGE REGULATOR
Regulates up to 150 Watts; Optional Built-in Rectifier



When you need a precision voltage regulator with a typical line regulation of 0.02%, try the LMR-4. This low profile TO-3 thick film hybrid circuit consists of an adjustable series regulator capable of regulating 8 to 50 volt DC power supplies. It includes an internal FET current source to give you excellent ripple rejection (40 db minimum). The LMR-4 permits the use of smaller filter capacitors. It can also be used as a driver for higher current regulators.

The PECL II series of monolithic integrated logic circuits are a direct second source of the Motorola MECL II series. The family has been designed as a non-saturating form of logic so as to eliminate transistor storage time as a speed limiting characteristic and permits high speed operation.

PECL II circuits feature fast propagation delay times with commensurate rise and fall times, simultaneous complementary outputs, and excellent noise immunity as a result of near constant power supply drain.

FEATURES

- Propagation typically 4ns per logic decision.
- Excellent noise immunity characteristics
- Simultaneous OR/NOR outputs
- High fan-in and fan-out capabilities
- Internally temperature compensated

The SP1600 is a very high speed emitter coupled logic (ECL) range employing transistors in the non-saturating mode, and using Plessey Bipolar Process III technology is inherently the fastest type of integrated circuit logic series available. It is characterised by propagation delays around 1 nS and transition times less than 1.5 nS with 800 mV logic swing and offering a power delay product of 55 pJ.

The 'B' range of devices are a direct second source of the MECL III range whereas the 'A' range has improved dynamic performance. This ensures that the SPREAD in switching parameters is less under any drive conditions. This is a very important consideration in any logic system design.

TUNABLE BAND REJECT FILTERS (5-2000 MHz)

Tunable multicontrol band reject filters provide high rejection of more than one and up to eight unwanted signals, or, extreme rejection of one. Low insertion loss and sharp skirt selectivity in the band reject region. Eight knobs and counter readout allow continuous tuning.

General Characteristics:
- Center Frequency: 5-2000 MHz
- Out-of-Band Insertion Loss: 0.5 dB
- Notch Bandwidth: narrow as ¼ % fo
- Notch Depth: 20 dB/section
- VSWR (outside of notch region): 1.5:1
- Size: 24" x 2" x 8"
- Connectors: BNC

Daico RF Mini-Systems

IF SERIES DIODE SWITCHES AND RF RELAYS

Multi-position diode switches contribute the lowest switching transients and insertion loss consistent with speed and RF power. All of these items can readily be provided with T²L logic and internal driver.

Daico Industries' RF relays employ hermetically sealed switching elements which provide extreme resistance to the severe environments encountered in military aircraft and communications systems.

DROP-IN SWITCHES
The Daico Industries' switch designs are available with coaxial pins or solder tabs which can be mounted directly onto a system PC card.

RF SERIES — DIODE SWITCHES
Switch designs SPST, SP2T, SP3T and Transfer have been optimized for performance over the 1-3 GHz regions. These units utilize the latest in RF stripline techniques to provide maximum isolation with insertion loss below 1 db.

STEP PHASE SHIFTERS—IF SERIES
The IF series multi-bit phase shifters are also available with solid state or relay combining elements. The relatively narrow band device uses various lengths of coaxial line to vary phase.

STEP ATTENUATORS — IF SERIES
Programmable attenuators are available with both solid state and relay combining elements. 0.1 db steps through 25.5 db, 1 db steps through 127 db.

HIGH POWER DIODE SWITCHES
These switches have been successfully employed in numerous CW and pulse systems. CW power levels to 400 W are available in frequency ranges from 20-1100 MHz. Pulse power levels to 8 KW are available in frequency ranges of 50-1500 MHz.

SWITCHING MATRICES
RF switching matrices are offered with both solid state and relay elements. These sub systems are provided with power supply, decoding logic and local or remote control capabilities.

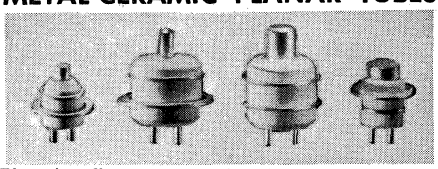
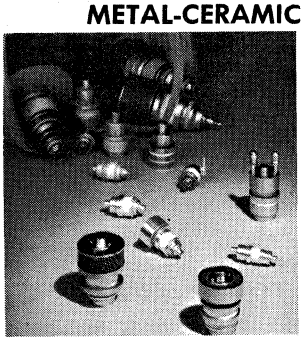
MICROWAVE DEVICES AND ELECTRON TUBES

METAL-CERAMIC PLANAR TUBES



General Electric offers an extensive line of planar tubes in diode and triode designs for oscillators, amplifiers, mixers, detectors, and many other high-reliability applications from d-c to 10 gc. Unsurpassed tolerance to environment as adverse as 3000 G's impact at 3-5 ms, 30,000 G's centrifuge, up to 48 G's RMS vibration (100-2000 cps, 3 min each plane) and −55 C to +400 C temperature. Have also withstood 10^{18} NVT and 10^{7} R/sec nuclear radiation. Minimum noise, in fractions of a db. Power outputs from low mw to 8kw peak. Tailored for CW, plate-pulsed, and grid-pulsed applications. Highest available ratio of power, efficiency, and gain-bandwidth to size and weight.

METAL-CERAMIC COAXIAL TUBES

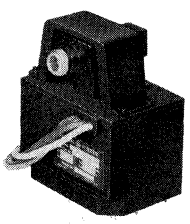


GE has the exact coaxial triodes and tetrodes for advanced VHF-UHF, RF power amplifiers, oscillators, or broad varieties of transmitter equipments to meet your most demanding application requirements. Advantages: high power gain, efficiency, voltage hold-off, duty factor; broad electronic bandwidth; long pulse-width life; reliable grid-pulsed amplifier or oscillator service.

VTM's

Miniaturized shielded

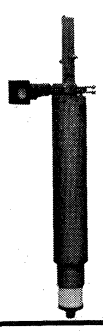
Magnetic and RFI shielded



Magnetic shielding and integral isolator

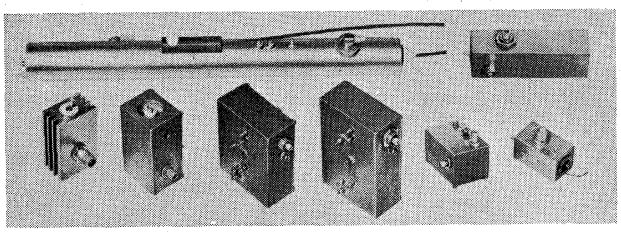
Voltage Tunable Magnetrons (VTM's) are high frequency, continuous wave oscillators operating in the microwave region. GE VTM's cover a wide range of frequencies — from 700 to over 5600 megacycles, with feasibility existing in X-band and down to 100 mc. Low power (up to 1 watt) for low-noise local oscillators, signal generators. Medium power (1-10 watts) for altimetry, telemetry. High power (over 10 watts up to 100's of watts) for broadband transmitters, barrage jamming, airborne applications. Also magnetically shielded VTM's at 1000-2000 mc and 2000 to 4000 mc (1 watt) for driver applications.

KLYSTRONS



GE has over 15 years experience in custom design, manufacture and repair of high-power, multiple resonator, amplifier klystrons and capability to produce klystrons for **specific** applications. The units, constructed of metal and ceramic, use ion pumps to maintain excellent vacuum conditions. Tunable types are designed so each cavity tunes at the same rate for perfect gang-tune tracking across frequency band. Broadband types are tunerless; flat freqency responses are rigidly, permanently determined during manufacture. Tunable and broadband pulsed ampilfier klystrons available in L, S bands.

MCM's*



***Microwave Circuit Modules with planar tubes or solid-state devices. May be used as Oscillators, Amplifiers, Multipliers, Detectors, Mixers, Integrated Isolators and Circulators.**

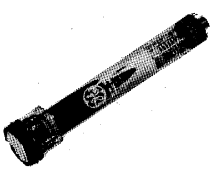
General Electric puts nearly 3 decades of commercial and military microwave component experience into the MCM. Designers can benefit from an unequalled output of highest performance active components including coaxial and planar gridded tubes. One source provides "in-house" ferrite know-how, critical testing experience and facilities, and full R&D back-up. Now, optimum integration of active devices in packaged circuits can help reduce design cycles, provide retrofit capabilities and lead to improved system performance with lower over-all cost.

MCM's with planar tubes or solid state are available.

CIRCULATORS AND ISOLATORS

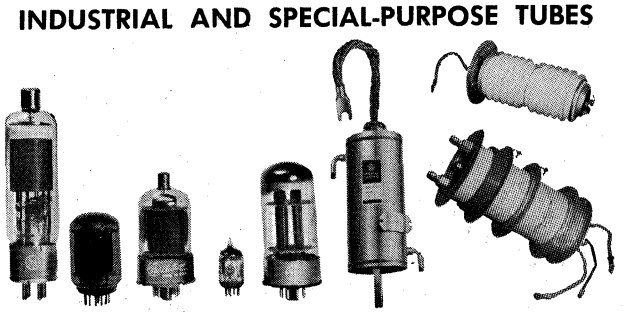
GE coaxial, stripline circulators and isolators can typically handle 100 to 500 watts CW and more, and are capable of operating under severe environmental conditions. All frequencies from 0.3 to 5.5 GHz are covered, and typical bandwidth in these frequency ranges is approximately 20 percent with greater bandwith available. Magnetically shielded and miniaturized units are available, with unique terminations and connections a specialty.

IMAGING AND DISPLAY DEVICES



GE offers industry's finest line of high-quality imaging and display tubes... including: image orthicons; industrial and commercial vidicons.

INDUSTRIAL AND SPECIAL-PURPOSE TUBES



General Electric offers an extensive line of reliability-proven industrial and special-purpose tubes including the following popular types: ceramic, communication, Five-Star, glow tubes, ignitrons, industrial receiving, rectifier, thyratrons, transmitting tubes and triggered vacuum gaps.

UNITRODE

MICROWAVE PRODUCTS

The Unitrode fused-in-glass process results in a highly-reliable, voidless, hermetic package and is now available for both high and low power PIN diodes. Our unique construction assures the lowest possible thermal resistance and series resistance compared to diodes of conventional construction.

Our process utilizes symmetrical full-faced metallurgical bonds to both surfaces of the silicon chip and results in peak and average power dissipation capability never before possible in PIN diodes. Also, the monolithic construction greatly minimizes the normal parasitic inductance and capacitance found in conventional diodes which employ straps, springs, whiskers, and ceramic packages.

Diodes of the Unitrode construction have stability and reliability proven by millions of device hours in systems of all types. Also, environmental performance is unparalleled as they can withstand thermal cycling from $-195°C$ to $+300°C$ and exceed all military environmental specifications for shock, vibration, acceleration, moisture resistance and solderability.

Long carrier lifetime permits low distortion of RF signals and consequently results in low harmonic generation and intermodulation. Although switching time is dependent upon carrier lifetime, it is possible to obtain speeds on the order of 10% of the lifetime through the proper choice of bias and driver conditions.

Each series offer 4 or 5 standard packages all built from our basic diodes (style A), and offers a tradeoff of series resistance, capacitance, lifetime and parallel resistance. High and low voltage diodes are available in each series.

Ordering Instructions

Part numbers of Unitrode Pin Diodes consist of the letters UM followed by four digits and one or two letters. The first two digits indicate the diode series, the next two digits specify the minimum breakdown voltage in hundreds of volts. The remaining letters denote the package style. Reverse polarity (anode on stud end) is available in C and D Styles and denoted by adding second letter R.

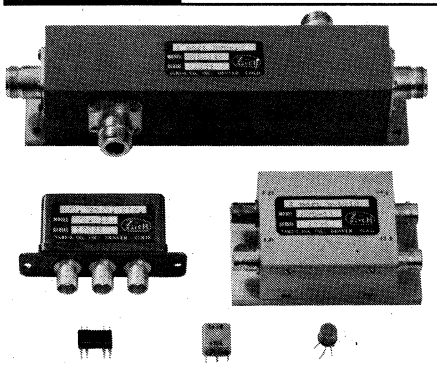
Z-MATCH

WIDE BAND HYBRID POWER COMBINERS/DIVIDERS



Hybrids can combine vectorially two signals from an antenna or other source, can function as directional couplers, and may be used as the input and output coupling means in balanced mixers and phase detectors. Z-Match hybrids fall into two basic categories: (1) balun devices, which are essentially well balanced, DC isolated wide band transformers with impedance ratios of 4:1 (Ref. Figures 5 - 6 with N = 2) and (2) combinations of two or more transformers to comprise hybrids with equal 50 - 75 ohm impedances on all ports (Ref. Figures 5 - 6 with N = 1).

Combinations or tandem arrangements of the models listed in the table may be used to form 2, 4, 8, —— 2^n way divider/combiners for equal, isolated signal distribution or multicoupler systems. The isolation properties of a hybrid minimize oscillator pulling or intermodulation while combining signals vectorially with small (3 dB in a single 2-way) signal loss.

All models listed in the table below are capable of meeting the specified limits over a temperature range of −55 to +100°C. and are designed for military environments. Additional information as well as data on 90° hybrids is given in Bulletin 111.

Low Intermodulation Products

Mixing two signals to produce a sum and a difference frequency requires a square-law device, and a diode has long been used for this purpose. Because it departs from true square-law behavior over much of its range, it produces products other than those desired, and it also feeds energy through from one port to another. The balanced mixer was developed to overcome these shortcomings, and its advantages are so numerous that it has become a standard component in most high-performance receivers. It is also valuable in the design of such high-reliability items as aircraft navigational equipment, microwave links, spectrum analyzers, etc. It would be out of the question to meet modern military equipment specifications, particularly as regards oscillator radiation from the antenna and intermodulation distortion, without the doubly balanced mixer. These advantages would also be desirable in equipment such as television receivers, CATV distribution circuits, and amateur communications receivers, but high cost has been a deterrent to using balanced mixers in such service. In recent months Vari-L Co., Inc. has been making strides toward a marked cost reduction in the device, and we invite inquiries from set designers who might like advance information.

NEW HIGH LEVEL DOUBLY BALANCED MIXERS

Recently balanced mixers have been developed containing networks which greatly improve their ability to handle, linearly, high RF signal levels. These designs (see Type 1 Mixers, Page 6) have lower harmonic spurious outputs as well as improved odd order intermodulation production. Other characteristics parallel the low level types except that higher local oscillator drive levels are recommended.

APPLICATIONS:
MODULATOR

Because one port is coupled to DC, the doubly balanced mixer may be used as a pulse modulator with unlimited pulse duration. RF input is made to port L, modulation to port X, and the output from port R. Total current should not exceed 50 ma. The modulator has a 35 dB on/off ratio at f_{max} (greater at the lower frequencies) and a turn-on/turn-off time of less than one nanosecond. As an AM modulator, with the X port used for the modulation-signal input, the mixer has excellent carrier rejection at high frequencies. The carrier may be reinserted after the modulator, or will feed through the mixer in controlled amounts if a DC bias (suitably isolated from the modulation source) is introduced into the X port.

CURRENT-CONTROLLED ATTENUATOR

By the use of a DC bias as described above, the mixer can function as a current/voltage controlled attenuator. With zero current into the X port the attenuation of an RF signal of frequency up to the specified f_{max} will be at least 35 dB, reducing to approximately 3 dB when the bias current is increased to 10 ma. Response time is less than one nanosecond. The signal is introduced to the R port and the output taken from the L port.

PHASE DETECTOR

Because the X port is DC coupled, it is possible to extract a DC voltage as a function of the phase difference between two signals. Minimal I/f noise is introduced, because of the inherent low-noise quality of the diodes, and their superior balance makes a DC adjustment of the phase detector unnecessary. The DC output is approximately 0 VDC when the L and R port signal phase relationship is $\phi = 90°$, and approximately $\pm.4$ VDC for $\phi = 0$ or 180° phase conditions.

CONSTRUCTION

Z-match mixers are packaged in several case styles allowing the design engineer maximum layout flexibility. Most types are encapsulated to withstand severe environments and handling. High-rel screened diodes are employed throughout, as well as approved design tested materials. Complete details are included on all types in Bulletin 106.

Figures 8 and 9 are performance curves which are useful in selecting a mixer for a given application. See also Fig. 12, Vol.2•626.

TYPICAL MID-BAND HARMONIC INTERMODULATION PRODUCT ATTENUATION

Figures to the left are for Type 1 mixers, and figures to the right (in parentheses) are for Type 2. Values shown in the table are obtained with clean, filtered input signals to the mixer. Suppression values given indicate the product amplitude in dB below the $f_L \pm F_R$ output level, using an f_R level for Type 1 mixers of 0 dBm and for Type 2 mixers of −10 dBm. The LO drive level is as shown in Figure 9, Page 5. This table should be treated as a design guide only; values given are normally within 10% of actual performance for models listed for service below 1 GHz and within 20% for models designed to operate above 1 GHz.

ALTERNATE MIXER STYLES

The mixers shown in the table below were designed at customer request to replace existing packages. This list of exact replacements gives specifications for units which are completely tooled in our shop and are available on a 2-3 week basis on special order. All are Type 2 units. (See explanation at end of table in Vol.2•625.)

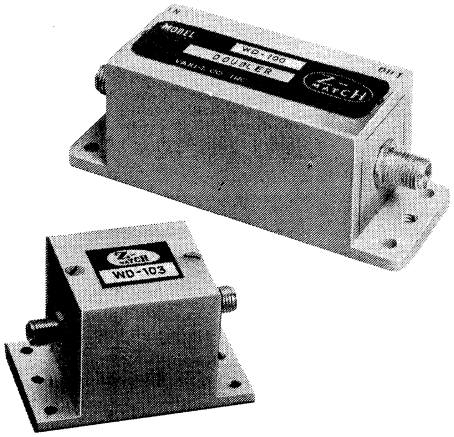
WIDE BAND FREQUENCY DOUBLERS



Models WD-100, 101, 102 and 103 were developed as components of laboratory equipment to double the frequency of high-level sweep generators, thus extending their range of usefulness. Since the output of the doubler is of relatively high level, the signal obtained is comparable to that of an expensive BWO unit, and a set-up can be made with existing equipment and appreciable savings are effected. The units, being quite small and compact, are often used as part of the local oscillator source for receivers, so they are recommended both as components of larger equipment and as laboratory test devices. The doublers are housed in extruded aluminum cases and are fitted with 3.6 mm. input and output connectors and have 50 ohm input and output impedances. The circuit employs a custom-designed Z-Match input transformer and carefully matched Schottky barrier diodes. The output circuit (Model WD-100 only) is isolated for DC by a special chip capacitor. The circuit elements and supporting structure are encapsulated in high-temperature polyurethane foam. Full electrical specifications are listed in the table below. Operating temperature range is −55 to +100°C. Complete specifications in Bulletin #102A.

Z-MATCH SWITCHES, PHASE DETECTORS, CHOKES

The new SS series of RF switches marks a significant breakthrough in switches exhibiting high isolation at all ports.

All types exhibit less than two nanoseconds switching speed, high level (+10 dBm for .1 dB compression) signal handling, and large on-to-off power ratios. Bulletin 109 details complete specifications on several types. Data on typical types is shown for reference below. All types are designed to meet MIL environments from −55 to +100°C.

(1) Fundamental feedthrough component at the output when a sine wave producing ±20 mA is used to switch the unit.

(2) Typically low repetition rate switching will produce very little feedthrough. For example, switching noise power at the output is −100 dBm maximum per 100 MHz of bandwidth when driven with a 3 KHz square wave, $T_r = T_f = .5\ \mu sec$ producing ±20 mA control current.

HIGH LEVEL PHASE DETECTOR

Model PD-100 is the first in a series of new high DC output phase detectors offering more than twice the voltage sensitivity previously obtainable with a balanced mixer approach. In addition, this new device will handle inputs up to +17 dBm linearly and provide precise zeroing for minor system balance by means of an accessory trim potentiometer. RF input ports impedance 50 ohms; temperature range specifications, −55 to +100°C; maximum total input powers, +17 dBm each R port.

(1) Output characteristic is nearly Z shaped, load for all specifications 1000 ohms resistive.

(2) PD-100 is offered in the SPA package .250 high — see mixer outlines.

(3) Model PD-101 is electrically the same as above, but is offered in style CA case with BNC connectors. See mixer outlines. Full specifications are contained in Bulletin 110.

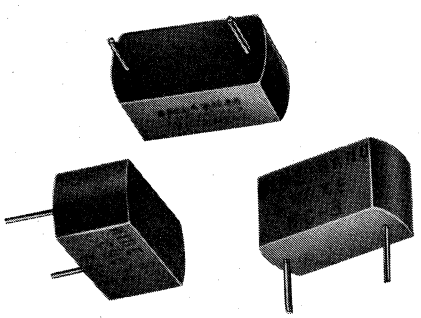
WIDEBAND R.F. CHOKE



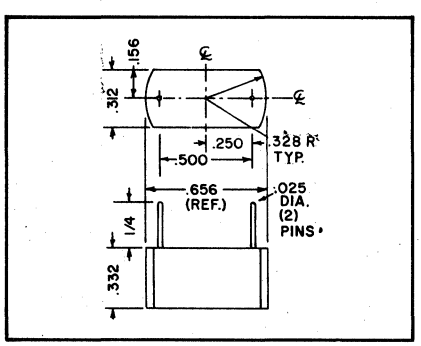


FIGURE 21
CHOKE OUTLINE DRAWING

An RF choke for VHF-UHF circuitry should present a constant high impedance over a wide band of frequencies and should be non-lossy. Ordinary chokes made by winding a few turns of wire on a powdered iron or ferrite core do not fulfill this requirement because their impedance peaks sharply, and even though the actual resonance is placed outside the band the high order of impedance change over the band can be troublesome.

The chokes described below have very low loss, are virtually non-resonant and have a constant impedance over a very wide range of frequencies. They all have DC resistance of less than .1 ohms and will handle up to 2 amperes of current. Despite their small size they are suitable for use in high-power transistor oscillators and amplifiers, where they serve as RF isolators in the DC supply. Additional applications which have been tested are offered in Bulletin 104.

A. DC isolation in wide band circuits employing Z-Match transformers.
B. RF decoupling.
C. Transient and RFI suppression.
D. DC burnout protection.

Price, 1-9, Models WC-1, WC-2, WC-3, WC-4: $10.50 each. General quantity discounts.

MICROTECH
RIGID AND FLEXIBLE WAVEGUIDE

At it s modern, 30,000 square foot plant in Cheshire, Conn., Microtech manufactures a comprehensive, quality line of flexible waveguides, solid state pin diode switches and attenuators. Microtech's flexible waveguides include:

The seamless corrugated type, which can be bent to small radii, is highly stable and assures superior, RF leak-free operation.

The soldered convoluted type, for maximum bending with minimum leakage, is excellent for misalignment applications where moderate vibration prevails. It is particularly efficient and economical in tight-bend radii installations.

The interlocked flexible type, the only flexible waveguide fully interlocked in all four walls, is the strongest type of flexible waveguide. It is excellent for high power applications and provides the added advantage of elongation and compression.

Microtech has deep engineering and manufacturing experience in combining flexible and rigid waveguides to achieve the optimum in a system.

Microtech designs and produces double ridged waveguide assemblies and components, which it supplies in both flexible and rigid types.

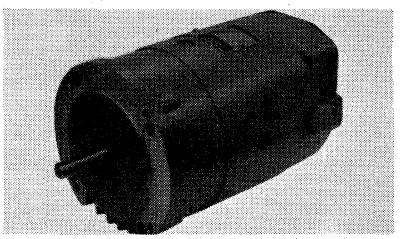
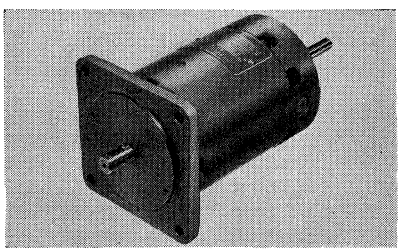
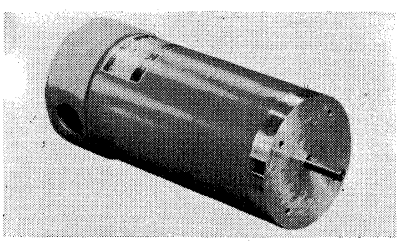
AC and DC MOTORS AND GEAR-MOTORS

DC Motors







For general duty on variable- or constant-speed applications where the power supply is d-c or where a-c/d-c conversion is used for controlled speeds. Also ideal for reversing applications. Type BC direct-current motors will start, accelerate, and run fractional-horsepower devices smoothly and easily. They are available in open, totally enclosed, explosion-proof, and severe-duty enclosures with solid base, round frame, or end mounting in most ratings. Special-purpose type motors are also available for full- and half-wave rectified power drives. For complete information, write for Bulletin GEA-8264.

Reel-Drive Motors

GE's full line of fhp direct-current motors includes three frame sizes widely used for reel drives: 3.4", 4⅝", and 6⅝" diameters. Special end mountings and shaft extensions meet exacting application requirements. Series, split-series, compound, shunt, and compensated-shunt winding designs offer a broad design choice. Stall torque ratings from 3 to 120 ounce-feet and higher span various application needs, and motor voltage requirements are normally matched to your system design.

New Permanent Magnet Motors

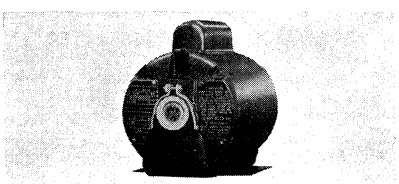
GE's new BPA-34 permanent-magnet motors are smaller and lighter than comparable wound-field motors of the same rating. Permanent magnets replace field windings, eliminating the need for field power supply and the chance of field-winding failure or burnout; and with battery power efficiency is increased, battery drain decreased. Two leads from power supply reduce connect and disconnect time. The motor features double shielded ball bearings and Class B-R insulation system that meets NEMA and USA Standards for Class B, and is recognized by UL for up to 130 C hot spot temperature.

In 3.4-inch-diameter totally enclosed frame, the BPA-34 is available in face, flange, or welded-base design for 115 volts d-c with modifications from 6 volts d-c. Speed-torque is linear, producing a d-c rating of about ⅓ hp at 3450 rpm, ⅕ hp at 1725 rpm, and 1/7 hp at 1140 rpm on a continuous basis.

The BPA-34 is ideally suited for such applications as copy machines, tape reel drives, printers, and filing equipment, and for any other equipment utilizing variable-speed drives or battery power where size and weight are critical.

NEMA 48- and 56-Frame A-c Induction Motors

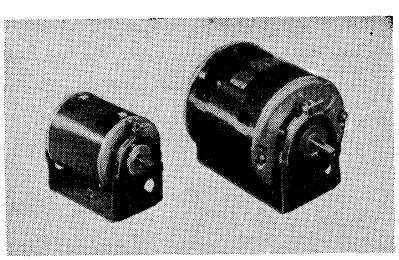
Dependable Form G Motors in Thousands of Variations



Form G a-c induction motors are available in most any electrical type, enclosure, and mounting in a variety of ratings from 1/20 to 5 hp for a complete range of commercial/industrial applications. For complete information write for Bulletin GEC-5000.

Small, Compact, A-c Induction Motors

Provide High Power in a Lightweight Package

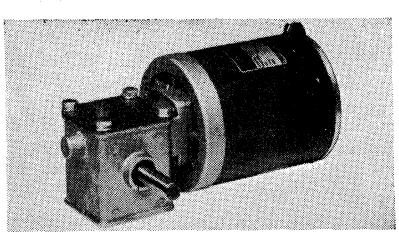


Small in size, but high in reliability, General Electric compact, powerful, a-c induction motors are available in ranges from 25 mhp to ½ horsepower. These reversible motors provide consistent, quiet, long-life operation in any mounting position. Synchronous motors for constant-speed applications are available in 3- and 3⅞-inch diameter models. Special designs can be provided for various torque motor applications such as tape reel drives. For dimensions, features, ratings, and application information, write for Bulletin GEA-8254.

Typical Electronic Applications: Computer memory drums, tape reels, capstans, disc filers, card stackers, card printers, card punchers, and data cells.

Mina-Gear™ Motors

Right-Angle and Parallel-Shaft



A compact, dependable, lightweight line of gear-motors with a flexible range of speeds, ratios, motor types, and frame sizes. Right-angle gear-motors are rated 1/40- to ½-hp with gear ratios of 102:1 to 11:1 with output speeds from 323 to 8 rpm. Parallel-shaft designs are of lightweight construction with aluminum gear housing and motor endshields. Ratings from 15 mhp to ⅙ hp with gear ratios of 195:1 to 4:1 and with output speeds from 417 to 8 rpm in two gear sizes. Mina-Gear motors offer you years of efficient operation, and are ideal for such devices as printing and office machines, medical equipment, door operators, and vending machines, and for many other applications requiring a compact design with relatively high-torque capability. For complete information on right-angle write for Bulletin GEA-7839; for parallel-shaft, Bulletin GEP-466.

SLIP RINGS Solid Coin Silver

Standard Coin Silver Slip Rings, both *cylindrical* and *flat* types, are illustrated at right. We recommend the cylindrical type rings with three brushes per ring . . . spaced at 120°. The cylindrical type are designed for press fitting over standard steel shafting. The flat type rings are designed for nesting either on an insulated plate or for molding into insulation. Insulated slip rings of either type or slip-ring assemblies can be furnished with leads attached.

No. 168 Series flat type **to 20" O.D.**

Standard "Flat" rings have ¼" radial contact surface and ⅛" radial spacing between adjacent rings.

No. 116 Series cylindrical type **to 36" O.D.**

Copper Slip Rings, flat or cylindrical, are available.

CONTACTS

GRAPHALLOY, because of its inherent non-welding and arc-quenching characteristics, is used widely for contacts. Ask for Data Sheet 950.

BUSHINGS, Oil-free

Replace oil-lubricated bushings in synchros, instruments, timers and missiles.

Advantages: 1) Lower friction at room temperatures. 2) No oil to solidify at low temperatures. 3) No oil to carbonize at prolonged elevated temperatures.

*Ask for Data Sheets 270 and 277 on Miniature Bronze-*GRAPHALLOY *Bushings.*

CONNECTORS

These silver-plated coil spring Connectors make for positive electrical connection to the brass body of the brush holder by snapping into the groove on the holder. The connecting lead can be pre-soldered to the Connector.

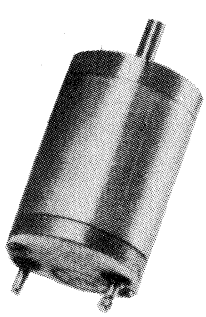
SIZE 9 PMDC MOTOR

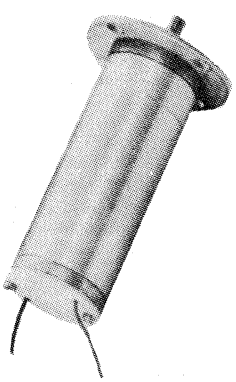
Super PMDC Motors



The Super ⅞ (Type 917) and 1¼ (Type 810) subfractional horsepower PMDC motors are equivalent in torque and output to many standard 1¼ and 1½ motors now available. The major advantages of these units are the savings in weight, space, and power consumption. In addition, for most applications they are considerably more economical than equivalent larger motors.

Designed for long life in both military and commercial applications, they feature rugged design, sturdy construction, and reliable performance. Seven bar commutation and stabilized high energy magnet insure smooth operation with a minimum of cogging.

⅞ PMDC Gearmotors



The Rotamec line of ⅞ PMDC Instrument Gearmotors is comprised of the standard, field-proved line of ⅞ motors in combination with Rotamec's comprehensive family of gearheads.

All **motors** feature 7-bar commutation, stabilized high-energy magnets, double shielded, life-lubricated ball bearings, stainless steel shaft and end bells, iridite treated housing, and armatures with fungus resistant varnish applied under vacuum impregnation. Minimum axial and radial shaft end play is standard.

Gearheads and options please consult the factory.

Precision miniature motors and miniature geared motors of the "Dunkermotoren" range offer an answer to almost every drive problem.

High performance battery motors (series GK) as d.c. motors with permanent magnet field and iron-free rotor (patented). Their high degree of efficiency makes these motors especially suitable for battery driven equipment.

Battery motors (series GVE) for normal requirements are d.c. motors with permanent ring magnet and iron armature with 8 coils.

D.C. motors (series GR) are constructed as iron armature units with permanent magnet field, having a shunt characteristic and a high efficiency. They are successfully employed where varying speeds and high starting torques are desired. These motors can be speed controlled by varying the supply voltage (contact-free by use of a.c. or d.c. tachogenerators).

All d.c. miniature motors are available as production models with various gear designs:

1. Spur gears in enclosed cylindrical housings with central drive (ZGR)
2. Spur gears in enclosed rectangular housings (ZG)
3. Spur gears in open rectangular housings (PZG)
4. Worm gears in enclosed rectangular housings (SG), also with angle drive.

The reduction ratios cover a wide range with precise staging.

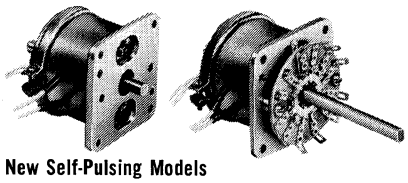
STEPPING MOTORS, SERIES 50

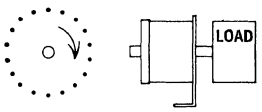
torque to 246 ounce inches



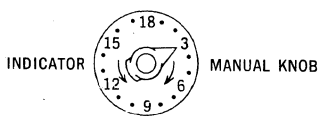
New Self-Pulsing Models

New Series 50/12S, 12-position, step motor has built-in pulsing contacts, so you simply apply DC voltage to make it step. Self-pulsing model is also available with notch control deck and flatted shaft extension. Add switch decks and you have a combination power positioner and self homing stepping switch. Details in Catalog D-7001.

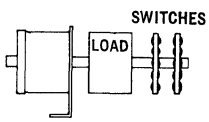
With a **unidirectional** Series 50 you can . . .



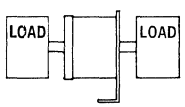
drive your load remotely through a series of short steps and stop at any one of 10, 12, 18, 24, or 36 positions.



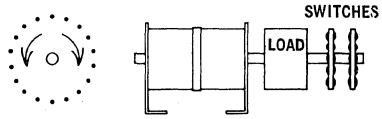
or add a knob for manual reset in either direction . . .



or add rotary switches for a combination power positioning drive and a step or program switch



or use shaft extensions on each end to direct-couple two loads and drive them in the same direction at the same time.



With a **bidirectional** Series 50 you can do all **this** . . . plus **remotely position** loads CW or CCW.

Top curve in each graph shows net starting or breakaway torque, typical when friction component of load is high in beginning — as in driving a valve. **Lower** curve applies when friction load is consistent throughout stroke. Dotted lines "A" show output at 1/4 duty, 84 watts; dotted lines "B" 1/10 duty at 210 watts.

All working parts are completely enclosed. Minimum life is 3 million steps. For bidirectional, 3 million in each direction. And, the Series 50 works on simple square wave input pulses . . . so you don't need expensive logic circuitry. Ledex Series 50 stepping motors are engineered for high torque-to-size, uniform stepping accuracy, construction simplicity and economy.

Newly developed tooth clutch drive gives positive grip stepping action (no slip) and doubles as a built-in electromechanical clutch brake to eliminate the natural tendency of overdriving at the end of a step.

Catalog D-7000 lists complete details on 51 stock models, performance data and engineering considerations.

PUSH & PULL SOLENOIDS

You name the job.
Short, medium or long stroke. High speed.
Tight space. Unusual load. Ledex has the solenoid for you, usually on the shelf. Expert design assistance for your toughest custom requirements.

Pancake shaped Ledex push/pull solenoids are built for high force to size and fast response. Better than 10ms response. Form factor minimizes size, provides maximum pole face surface for best efficiency. Two types available. Flat face is for short stroke, rapid response. Conical face gives more mid-range punch.

Quality engineered for efficiency and long term dependability, the Ledex long stroke solenoid has a built-in impact cushion pad to absorb energy at the end of the power stroke. For smooth travel and long wear, the solenoid plunger is electroless nickel plated. It rides in a smooth bushing track designed for positive alignment and low friction. Slotted and cross drilled plungers on all stock models simplify load attachment. Off-the-shelf models available for 12, 28 and 100 VDC operations.

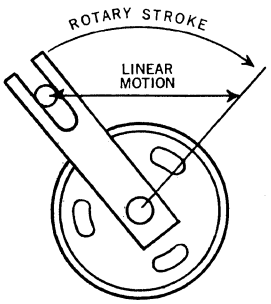
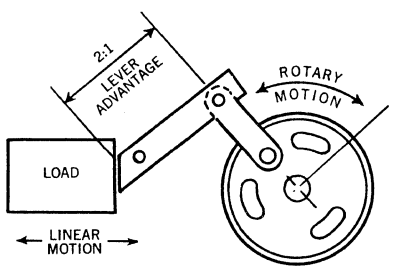
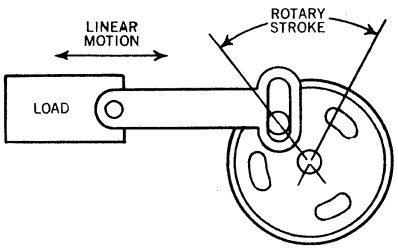
Rotary Solenoid as a Linear Actuator



SHAFT BAR LINK



ARMATURE LEVER



ARMATURE DRIVE PIN

When the stroke length is beyond the range of Ledex straight pull solenoids, a rotary solenoid may be the best solution.

Ledex rotary solenoids have raceways coined in the armature and stator. With precision ball bearings riding on inclined raceways, the solenoid provides direct, almost friction-free rotary motion. In the beginning of the stroke, where the output of a linear solenoid is low, the raceways are steep. Toward the closed end, where the magnetic attraction reaches maximum force, the raceways taper off. The effect is to evenly distribute the force.

Ledex solenoids can help you get a lot of work done in places where you don't have much room. We make both push/pull and rotary solenoids in a wide variety of shapes and sizes to solve just about any actuating problem you have.

Call Ledex when you need a lot of power in a small space to push, pull, turn, twist, step, index, hammer, punch or trigger. For a quick start on your prototype, choose from 230 different stock model designs. Or, send details and we'll custom design a space-saving solenoid for you.

Magnetic Technology®

High Performance DC Torque Motors.

Exotic one-of-a-kind motors as well as more than five hundred standard models combine high ratios of torque to power, speed and size with other desirable characteristics such as low electrical time constant and low ripple torque.

These are permanent magnet, armature excited motors that are furnished frameless for direct mounting to the driven load without gears. Large bore, minimum width and thin-ring configurations make possible compact system packaging.

Peak torque ratings of standard models range from 7 oz-in. to more than 120 lb-ft., OD's from 1.5 inches to more than 15 inches and armature bores to more than 10 inches.

These MagTech® designs have proven their merit in aircraft, missile and space applications.

Continuous Rotation Brushless DC Torque Motors

These motors have advantages over conventional brush-type DC torque motors in some applications. They provide

- reliability and operational life not affected by brush wear-out
- elimination of EMI problems associated with brushes
- no explosion hazard
- operation at higher rotational speeds
- fewer problems in preparation for outer space use

Motors can be furnished with two or more input phases for sine or square wave excitation. Motors are available with either the inner or outer member rotating.

Peak torque ratings range from 6 oz-in. to 14,000 oz-in. The motors are axially thin, ranging from .35 to 1.5 inch widths for OD's of 1.6 to 19.3 inches.

Magnetic Technology also can supply associated electronic drive and control systems. Such special features as constant speed or constant torque drives are available as are systems that exactly duplicate performance of a brush type torque motor.

Volume Produced, Low Cost Industrial/Commercial DC Servo Motors

Only subtle design, performance and materials variations distinguish these quality, direct drive motors from Magnetic Technology's established military grade motors. Yet, through volume production they are priced for industrial and commercial markets.

Features include fast response, high torque, precise positioning, high tracking accuracy, quiet operation, and relatively low ripple. Permanent magnet fields and moving iron design result in both higher efficiency and thermal inertia.

These servo motors couple directly to the driven load, eliminating the disadvantages of gears and gear trains in servo systems. System simplification is possible and excellent system stability results.

Applications for these units include disc memory systems, card sorters, tape transports and printers, N.C. machine table drives and feedback tachometers.

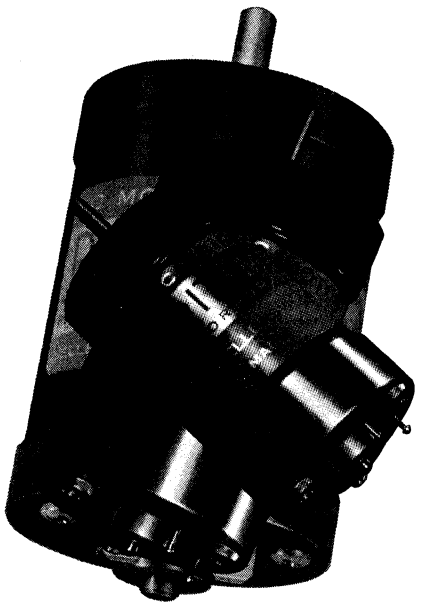
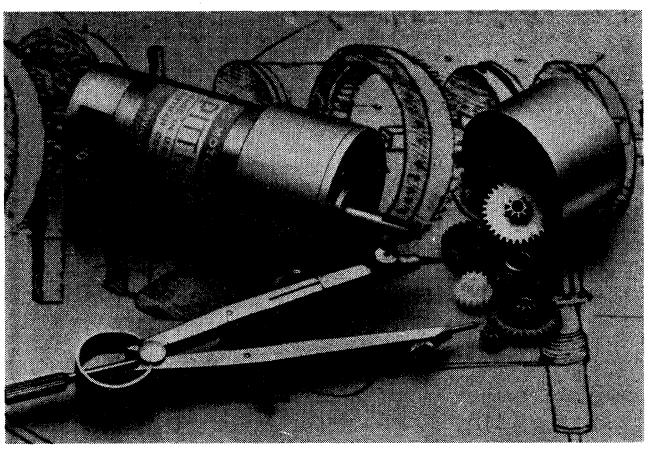
For cost effective solutions to your miniature D-C motor application problems...

Put Pittman's forty years of experience to work for you.



MOTORS: Three series of d-c motors having diameters of 1.27″, 1.63″ and 2.05″. Each in three lengths ranging upward from 2.2″ exclusive of shaft extension. Most models can be supplied for inputs from 6 to 48 VDC. Load speeds from under 1,000 rpm to approximately 10,000 rpm. Stall torques from under one oz.-in. to more than 70 oz.-in. Quality materials and construction ensure high performance and durability at moderate cost. All motors available with your choice of self-aligning oil-impregnated bronze bearings or double-shielded ball bearings. Custom modifications possible in production quantities.

LO-COG® servo motors are built in three series identical externally to the motors described above plus a fourth series 1.18″ in diameter exclusive of terminal block. These LO-COG motors offer exceptionally low magnetic cogging yet provide the desirable thermal characteristics and high torques of iron armature designs.



GEARMOTORS: PITMO® gearmotors have a gearbox diameter of 1.375″ with lengths from 2.99″ to 3.39″ excluding output shaft extension and pilot boss. Gears are sintered iron to AGMA 9E tolerances except for the first gear after the armature pinion. The latter is molded Delrin(1) acetal resin to AGMA 8E tolerances. Four standard gear ratios from 6.6:1 to 197:1 are available. Torque limit on the gearbox is 250 oz.-in. Motor sections feature LO-COG construction as described above under "MOTORS".

(1) TM of DuPont Company

MOTOR TACHOMETERS: Units in the current series of PITMO motor-tachs have a diameter of 1.18″ exclusive of terminal blocks. Their length is 3.66″ exclusive of shaft extension and pilot boss. Separate motor and tachometer-generator armatures are mounted on a single shaft and operate within two different field magnet systems. Standard 12-volt unit provides stall torque of 3.6 oz.-in. and No-load speed of 4,100 rpm. Tachometer gradient is two volts per 1,000 rpm with typical ripple of 5% peak-to-peak with no filtering. Other windings are available for both motor and tach.

Typical applications include digital tape cassette drives, chart and pen drives, and other velocity or position servo systems where accuracy of speed control or high damping is a requirement.

SLO-SYN® Synchronous/Stepping

M SERIES STEPPING MOTORS Shown in chart with M prefix. Represent the most advanced permanent magnet stepping motor design available and the most complete range in both torque ratings and size. Provide the highest torque per pound and torque to inertia ratios. Can be driven at rates above 20,000 steps per second with minimum of power input. Have Class B insulation and may be operated at ambients from −40°C to +65°C. Stepping increment is 1.8° using a 4-step input sequence; 8-step input sequence gives an 0.9° stepping increment. Step accuracy choice of either ±3% or ±5%. Chart shown gives off-the-shelf SLO-SYN drives for motors listed but custom drives can be designed by Superior Electric or built by the user if desired. For torque vs speed characteristics and complete ratings and specifications, request Superior Electric Catalog MSM1171.

PRECISION STEPPING MOTORS Shown in chart with HS prefix. Designed for phase-switched d-c stepping. Make 200 steps of 1.8° per shaft revolution. Each step is accurate within ±3% nonaccumulative. Can be used with SLO-SYN controls and drives or with user-designed and built drives. With proper circuitry, may be operated at speeds greater than 1000 steps per second without missing steps.

BIFILAR MOTORS Shown in chart with 4-number suffixes. Contain twice the windings of a 3-lead motor for better L/R time constant, better performance. Use simple drive circuitry or recommended SLO-SYN drives. Make 200 steps of 1.8° per shaft revolution except LS prefixed types which have a 0.72° step angle and TS prefixed types which have a 5° step angle. X prefixed are explosion proof. Step accuracy is ±5% nonaccumulative.

AC SYNCHRONOUS MOTORS

PERMANENT MAGNET A-C CONTROL MOTORS have no brushes, ratchets or detents feature extremely rapid starting, stopping and reversing characteristics. Need only a single-pole, 3-position switch for complete forward, reverse and "off" control. No excessive inrush current when energized because starting and operating currents are nearly identical. Can be completely stalled or overdriven without overheating and without harmful effects on components. Start or stop in less than 5° of shaft rotation; no need for electrical or mechanical braking. Phase-shifting resistor and capacitor must be used when operating from a single-phase source. Speeds available are 28.8, 72 or 200 rpm at 60 hertz.

CONTROLS AND DRIVES

TRANSLATOR ST1800B For pulse-to-step conversion of data to bifilar motors. Converts low-level signal pulses or square waves into the correct switching sequence needed to drive a SLO-SYN motor at the desired stepping rate. Input is 105-125 volts a-c, 1.5 amps. Signal input impedance is 500 ohms. Input may be triggered by pulse or square wave or by an external switch. Operates in ambients from 0°C to +40°C. Ideal for a wide range of programmed positioning and indexing functions. Approx. shipping weight 12 lbs.

ADJUSTABLE SPEED DRIVE ST1800BV Essentially a translator with a built-in oscillator to supply triggering signals. The oscillator frequency can be adjusted to vary the speed from 4 steps per second up to the maximum permissible with the motor used. Have same other characteristics as SLO-SYN Translator ST1800B.

TRANSLATOR MODULES Plug-in printed circuit boards with logic capabilities for stepping SLO-SYN motors. STM1800 and STM1800C are basic translators capable of bidirectional operation of motors. Those suffixed V, i.e. STM1800V and STM1800CV, are similar but have built-in oscillators to provide triggering signals. Potentiometers are supplied with V-suffixed models for adjusting the oscillator speed. STM1800 and STM1800V have speeds to 500 steps/sec and are used with HS and bifilar motors. STM1800C and STM1800CV have speeds to 2000 steps/sec and are used with M Series motors. Types STM1800 and STM1800V require 8 amps power supply transformer T5934-G2. Types STM1800C and STM1800CV require 10 amp power supply transformer T6382.

HIGH SPEED TRANSLATORS Used with precision (HS prefix) and M series (M prefix) motors to provide high stepping speeds. High speed translator HTR400 has 50 to 2000 step/sec speed; HTR103RT has 100 to 3000 step/sec speed; and HTR105RT has 100 to 5000 step/sec speed. Acceleration and deceleration is adjustable. Each pulse received from a built-in oscillator or from an external source will cause the translator to advance the motor one step. Triggering pulses can be supplied by tape readers, computers, oscillators, etc. Ambient temperature: 0°C to 40°C operating; −55°C to 85°C storage. Rack mounted design with plug-in solid-state circuitry.

BUFFERED TRANSLATOR Drives M Series (M prefix) motors in response to commands from computer, digital control or other device which operates at a fixed pulse rate. Acceleration and deceleration not required from pulse source. Translator stores incoming pulses and feeds them to the motor, automatically accelerating and decelerating at a rate compatible with the response characteristics of the motor. Acceleration and deceleration rates are approximately 6000 steps/sec² for BTR103RT and 15,000 steps/sec² for BTR105RT. Motor is driven one step for each pulse received from control unit. BTR103RT has speed of 100 to 3000 steps/sec, BTR105RT has speed of 100 to 5000 steps/sec. Rack mounted only.

PRESET INDEXER SP1800B-5 Controls indexing operations where bifilar motors are used for positioning. Automatically provides the correct switching sequence needed to drive motors the required number of steps. Has provision for actuating external equipment needed to perform related operations. Dials on control panel can be set to provide desired number of steps up to 99,999 counting range. Operates in ambients from 0°C to +40°C. Input current 1.25 amps. Approx. shipping weight 19 lbs.

HIGH SPEED PRESET INDEXERS Used with precision (HS prefix) and M Series (M prefix) motors in indexing and other positioning operations. HPR400R-5 has 50 to 2000 steps/sec speed; HPI 153RT has 100 to 3000 step/sec speed; and HPI 155RT has 100 to 5000 step/sec speed. Decade counter controls on front panel permit selecting positioning increments up to 99,999 counting range. On index command, unit drives the motor the prescribed number of steps and then actuates a relay which controls external equipment. Count can also be set by computer or external decade switches. Ambients: 0°C to 40°C operating; −55°C to 85°C storage. Rack mounted only.

DC SERVO MOTORS

(FOR COMPLETE SNAPPER SPEED/POSITION CONTROL SYSTEMS, SEE **EEM** Vol.2•991)
(FOR AMPLIFIER COMPONENTS SEE **EEM** Vol.2•322)

The SNAPPER is a high performance permanent magnet field DC servo motor for use in both direct drive or geared servo systems. It is capable of high speed, low speed, control through zero speed, as well as plugging and operation at stall. The SNAPPER line is so named because of its very high torque capability in a TOTALLY ENCLOSED, NON VENTILATED frame. The excellent thermal capacity of the SNAPPER makes it possible to operate severe servo duty cycles without overheating. Its rotor construction is not subject to warpage, or to the extreme temperature cycles that plague designs of lesser thermal capacities and ruggedness.

DRIVERS

The scanners and choppers can be driven in any one of three modes:

1 Closed loop at the natural frequency of the fork, torsion bar or taut band with negative feedback from the pick-up coil;

2 Open loop at the natural frequency; or

3 In a phase lock or frequency lock loop.

Electrical or mechanical dampening can be included to reduce Q. In addition, automatic gain control can be added where extreme precision in amplitude is desired. Drivers can be supplied to operate from a DC source having an AC input. All drivers provide a reference signal for synchronizing other devices and instruments. Furthermore, an isolated pick-up can be incorporated directly in the chopper or scanner as a reference signal source.

Bulova designs and manufactures drivers. However, engineering assistance is offered to customers desiring to build their own drivers.

Three Basic Types – Frequencies from 5 Hz to 10 KHz Many Modulation Patterns Available with Drivers

OPERATING PRINCIPLE AND BASIC FEATURES

The same basic principle, mechanical resonance, is involved in the three basic types of units which are the foundation of Bulova's line of Optical Scanners and Light Choppers.

Application of this principle enables design of optical scanning and chopping devices which have many advantageous properties. Chief of these are:

- Reliability: No rotating parts, no bearings, no lubrication; hence no wear and no service problems
- Excellent Accuracy: ±1% usual, ±0.1 attainable. Can be any discrete fixed frequency, even fractions of a hertz
- Small Size: Down to 0.5 in^3 and less than 0.5 oz.
- Low Power: In milliwatt range.
- Virtually Drift Free: Exceptional stability with time, excellent temperature characteristics
- Reference Signals: Inherently available through driver Also, an optional, isolated pick-up can be incorporated directly in the scanner or chopper as a signal source.
- Environment: Withstand vibration to 20g, shock to 100g; temperature from cryogenic to 250°C; altitude to space vacuum; radiation >2 x 10^{13} NVT.
- Raster Scan: X-Y mounts and slaved units provide synchronized raster scan.

Existence of a broad range of stock designs enables Bulova to supply prototype and production quantities to customer specification on short lead time.

GENERAL SPECIFICATIONS

Choppers and Modulators are available in three basic types: tuning fork, torsion bar and taut band. The torsion bar and taut band mount single vanes, the tuning fork, pairs of vanes. Configuration and mounting positions of the vanes control beam modulation patterns. Typical examples are illustrated but almost any special adaptation can be generated.

LAMPS

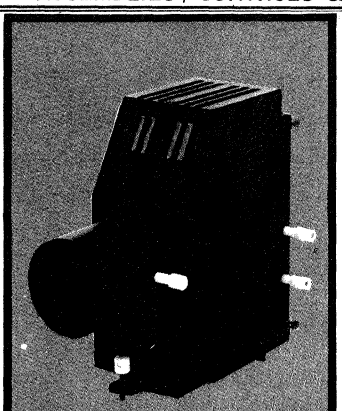
A complete line of mercury short arc lamps including a unique 350-watt model developed for exposing 3" wafers

"**Sunshine from Sunnyvale.**" We're providing light for the semiconductor industry at Illumination Industries. Our complete line of Mercury Short Arc Lamps are proved top-performers, available right off-the-shelf. From 50 to 1,000 watts, we have what the industry needs.

Lamp Type	iii-50	iii-107 iii-112	iii-202
Luminous Flux (Lumens/ minimum)	2,000	2,200	10,000
	iii-350	**iii-500**	**iii-660**
	17,500	30,000	10,000

iii can shed more light, too. We've got light from 50 watts to 20 kilowatts—Capillary Lamps, Xenon Short Arc Lamps, Xenon Flashlamps, and even Medium Pressure Mercury Long Arcs up to 8 feet and 20,000 watts. That's not all, either. We have UV exposure systems, Lamphouses delivering collimated light with 2" or 3" lenses, power supplies and more.

Come see the light. We're in the heartland of Silicon Valley. Come see us, or we'll ship complete details on the lights that shine profitably for you. Get in touch today.



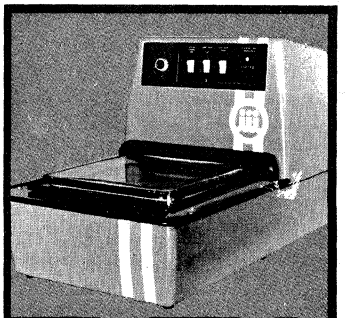
LAMP HOUSES

Houses for Xenon or Mercury short arc lamps delivering collimated light from 2" or 3" lenses

Making light work. Specifically designed for **iii** lamps, these Lamphouses accept mercury or xenon short arc lamps from 35 to 500 watts. Extremely flexible, they can be used in mask alignment photoresist systems, as image projection devices, or as collimating systems with interchangeable pyrex or quartz optics.

You can really see the light. Illumination Industries lamphouses feature a removable back plate which allows visual pre-alignment with the first surface rear mirror. And the spherical mirror provides a light gain of up to 50%. You can order your lamphouse off-the-shelf, or we'll build it custom-tailored to your needs. With collimated light on everything.

Light is our business. At **iii**, we're tracking the semiconductor industry with our product line—with every kind of lamp imaginable, UV exposure systems, power supplies and more. Get in touch today.



FLEX-POSURE

The first collimated light ultraviolet exposure system designed specifically for hybrid micro-circuit, back-side wafer and screen exposures

And there IS light. The tabletop, vacuum-frame Flexposure Systems for **iii** offer as much as 15 times faster exposure for both long runs or quick turnaround jobs. A unique point light source and reflector combination provide better resolution, too, with smaller geometries. Since the continuous pumping vacuum frame insures intimate contact of mask to substrate, there are fewer rejects. And fewer rejects mean increased yields.

Single and double-sided exposure. The Model 2120 is for single-side exposures, and the 2220 Flexposure is the double-sided system for double-sided circuits.

Now, light up at these prices! The Model 2120 Automatic Single-Sided 200 watt power Flexposure System is only $995! The double-sided, automatic 200 watt 2220 is just $1,295. Try to beat those prices. (You can't.) **iii** has modestly priced lamps of all types, flashlamps, lamphouses, power supplies and more. Just turn us on, and we'll light you up. Get in touch today.

FLASHLAMPS

The industry's most complete line of Linear, U-Shaped and Helical Flashlamps with the industry's most detailed instructions on designing your own optimum driving circuits.

"Sunshine from Sunnyvale" lives! iii has the most detailed design procedures ever offered (anytime, anywhere) to help you design your own single-mesh driving circuits. The total design information helps you design perfect circuits . . . faster and better.

Let the light shine in. After your design, the iii Flashlamp experts really brighten your production picture. Off the shelf, we have full lines of Linear Flashlamps, U-Shapes, Helicals . . . just about anything under the Sun! If we don't have it, nobody does. We'll custom-design *the* Flashlamp that fits your operating parameters perfectly if that's what you need. So let the "Sunshiners from Sunnyvale" shine a little light on your Flashlamp problems. $$C = \frac{I^2}{10}\ mf$$

Contact life expectancy relates directly to contact loads. Adequate arc suppression extends contact load life. Slight adjustment of R and/or C will eliminate arcing. Shown above is a typical arc suppression network available in TRI-R packages (on request). Other methods of arc suppression include diodes, neon glow lamps, and diode and resistor combinations.

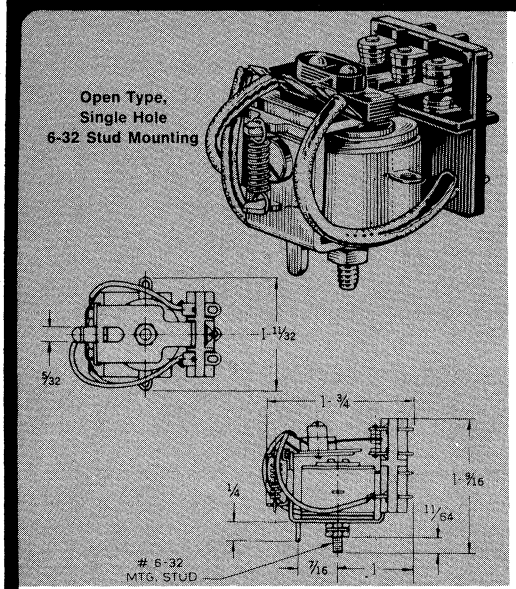
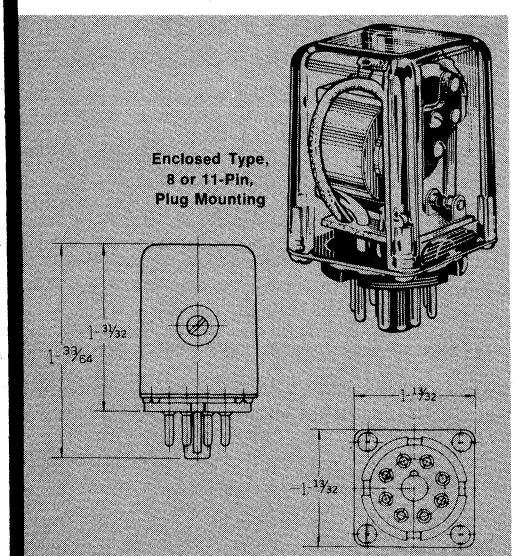
General-Purpose Relays





All relays have Nylon bobbins, shock-resistant armature mounting, and corrosion-resistant coil. The open types are U.L. Component-Program Recognized and have 6-32 stud mounting. 8 and 11-pin plug-in types are for applications requiring protection from dust, oil and other foreign substances. Stationary and movable terminal blocks are molded phenolic with ample separation between opposite potentials. All relays are color-coded for voltage and AC, DC or Plate Circuit types by means of colored coil tape. Shpg. wts. open types, 2 oz.; enclosed types, 3 oz. **NOTE: All relays ordered in multiples of 50 will generally be shipped bulk in handy production-line packaging.** Open types are available with Quick-Connect terminals on special order only; require 2 weeks lead time. Order as SO-703, Type Number, adding QC to end of number.

Contact Ratings: 10 Amperes at 120 Volts AC or 32 Volts DC, non-inductive loads. **Contact Material:** Silver alloy, gold-flashed. **Coils:** AC or DC; Nylon bobbins, sealed with a fused wrap; coil leads are braided pigtails. **Insulation:** 1500 Volts RMS between circuits and between circuits and frame. **Life Expectancy:** exceeds 5 million operations. **Mounting:** Open Types, single hole, tapped 6-32 stud; Enclosed Types, SPDT and DPDT, standard 8-pin octal plug; 3PDT, 11-pin plug. **Color Coding:** 12 VAC, Red; 24 VAC, Green; 120 VAC, White; 12 VDC, Blue; 24 VDC, Yellow; 120 VDC, Black; PLATE CIRCUIT TYPES, Brown.

GENERAL DESCRIPTION

The AZ miniature general-purpose, comb-actuated relay can be used in a wide variety of applications such as computer systems, control and alarm systems, business machines and data processing equipment, etc.

The field-proved, long-life characteristics of the AZ relay, along with its unique plug-in design and integral dust cover, allow it to be used in transistorized systems where space requirements and operational longevity are of prime consideration. The AZ relay requires less than one cubic inch of space. When installed with the AZ right-angle socket, its overall height is only ¾".

AZ miniature relays are available in all contact configurations through 6PDT. The contacts are capable of carrying loads up to 5 amps, as well as low-level signals. For low-level, high reliability switching, bifurcated contacts are available.

All parts of the magnetic circuit are made from armco magnetic ingot iron and aged in the most modern hydrogen annealing equipment ;a process which assures optimal stability of operating data during the life of the relay. All AZ relays are insulated with the highest quality pre-aged phenolic obtainable.

The AZ relays described in this brochure are all of the round-core type. This design feature provides a higher number of turns at the same coil resistance, resulting in greater mechanical force with less coil power. Only one adjustment is needed for any application.

The unique armature retention spring dissipates kinetic energy of the armature resulting in minimum bounce. The molded low-friction cradle results in further reduction of bounce and eliminates the problem of phenolic dust inside of the relay.

Additional features of the AZ420 include a new base and socket design made of unbreakable fiberglass-filled polyurethane, with an insulation resistance of 10^{10} ohms. A unique knife-type connector provides a more secure connection and eliminates flux contamination of contact surfaces during machine soldering.

HARDWARE FOR CRADLE-TYPE RELAYS

GENERAL DESCRIPTION

The Series ST Sockets and Hardware described in this bulletin will accommodate most cradle-type relays available, and specifically, American Zettler's AZ 420 and AZ 430 General Purpose Relays. Unique in design, these ST sockets open new applications for cradle-type relays and the unbreakable fiberglass-filled polyurethane base provides stability under extreme environmental conditions, enhancing the reliability of the relay itself.

Outstanding design features offered by the new ST Series are the insulation resistance of more than 10,000 megohms. the unique knife-type connector that assures a positive contact, and the slim-profile mounting. Right-angle sockets with relays mounted extend to only ¾-inches in height above the PC board. All right angle sockets are enforced by a stable nickel plated steel bracket which also provides ground connection.

Other features include a molded riser to provide a gap between the sockets base and the PC board to eliminate flux contamination during machine soldering operations; universal terminal spacing format for accommodating 0.1- and 0.2-inch grids.

GENERAL DESCRIPTION

The AZ miniature THINPAK relay, Series 530, has been designed for applications with either demanding space limitations, such as 0.6″ center-to-center PC card mounting, or operating requirements that cannot be met by reed relays or conventional contact type relays. The high pressure SPDT 1, 2 or 5 amp contacts operating at 26 VDC enables the unit to switch capacitance or lamp loads with current spikes that would normally weld the contacts of reed relays. The high sensitivity of 125 mW pull-in, long life and insulation resistance of more than 10^{10} ohms makes it an ideal unit for galvanic separation between electronic circuits. The AZ-530 THINPAK is available in standard coil voltages from 6 to 100 VDC with an operate and release time of less than 5 ms. It has PC terminals in 0.10″ grid spacing. A black polycarbonate dust cover with a bottom plate is provided.

GENERAL DESCRIPTION

The miniature AZ-Thinpak relay, Series AZ 531, is the DPDT version of the field proven Series AZ 530 relay. The high pressure DPDT (2 form C) 1 or 2 amp contacts, enables the unit to switch capacitance or lamp loads with current spikes that would normally weld the contacts of reed relays. The high insulation resistance of more than 10^{10} ohms and the low contact resistance of less than 50 milliohms makes it an economical unit for galvanic separation between electronic circuits. A black polycarbonate dust cover with a bottom plate is provided.

GENERAL PURPOSE RELAYS SERIES AZ 480

10 AMP CONTACTS

GENERAL DESCRIPTION

Commercial/industrial in application, these general-purpose relays feature the highest production quality at modest prices due to mass production techniques. The series AZ 480 finds broad application in the fields of motor controls, alarm systems, lighting and solenoid control, communications equipment, automated or semi-automated commercial controls, etc.

AZ 480 relays are available in either an open or plastic enclosed version. The open relay, with either solder or PC terminals, can be mounted with an attached base plate or with a 6-32 tapped hole in the core. It also can be supplied with a 6-32 mounting stud and locating tab. The relay enclosed in a plastic dust-cover is available either as a plug-in version with octal type socket (8 or 11 pins), or with PC terminals. AZ 480 relays are interchangeable with other manufacturer's types.

The standard AZ 480 relays have silver-cadmium-oxide 10-amp contacts in SPDT through 4PDT (5-amp contacts on request). The clean snappy action contacts operate with minimum bounce, resulting in greater reliability and longer life. A special plastic holding device prevents the armature from unseating itself during transportation or operation. The moveable contacts are securely mounted to the armature by a block of thermosetting plastic to ensure no change in adjustment during relay life. The stationary contacts are tightly stacked into a terminal block, which has barriers molded on both sides. UL-version listed under UL Component Recognition File E44211.

- American Standard Type
- AC or DC coils up to 220V
- Up to 4 PDT 10 AMP contacts
- Plug-in, wiring or PC board mounting
- Designed to meet UL requirements
- Life expectancy to 10 million operations

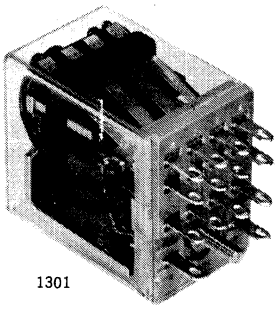
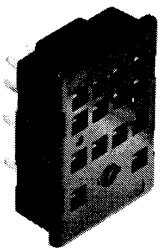
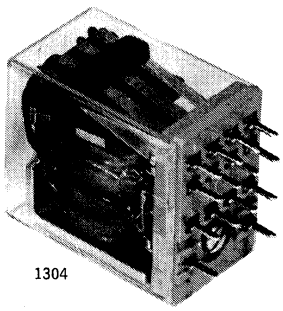
MINIATURE AC, DC RELAYS
SERIES TEC 1300



1301





1304

FEATURES

- AC or DC coils
- Less than 1 watt operating power
- 4PDT 5 amp contacts, gold plated
- Longer life expectancy due to unique contact blade design
- 1 Million operations at 3 amp 26VDC
- Polycarbonate dust cover
- Listed under UL Recognition File E45020

GENERAL DESCRIPTION

The miniature relay series 1300 with AC or DC coils and 4PDT contacts, available with either plug-in or PC terminals, is ideally suited for use in alarm systems, communications, and data processing equipment. Due to the low price, less than 50 cents per transfer contact, (considerably less expensive than solid state techniques) these units are finding broad acceptance in consumer type products. The rugged construction assures longer life than other similar relays. The unique design of the support for the contact blade provides better wiping action and less bounce. Strict quality control, in compliance with stringent Western European practices, guarantees uniform characteristics in high production quantities.
